## Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Consumer Prices Section,  
Prices Division.

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 995-4078) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(992-4734)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151

## How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

## Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des prix à la consommation,  
Division des prix.

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 995-4078) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(992-4734)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres régionaux de consultation.

## Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series shown in the publication. For further information on CANSIM call (613) 995-7406 or write Cansim Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

**Denis J. Desjardins**, Director,  
Prices Division

**Peter DeVries**, Chief,  
Consumer Prices Section

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

## NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 995-7406 ou écrire à, Division Cansim, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

Cette publication a été rédigée sous la direction de:

**Denis J. Desjardins**, directeur,  
Division des prix

**Peter DeVries**, chef, Section des  
prix à la consommation

## Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, *The Consumer Price Index*, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements for each of the three months in the reference quarter, at both the urban Canada and the regional cities' level. This is presented in the form of descriptive analysis supported by tabular and graphic information.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part IV of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

## Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, *L'indice des prix à la consommation*, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation de chaque mois du trimestre pour le Canada et les agglomérations urbaines. Ces informations sont présentées sous la forme d'analyses descriptives appuyées de tableaux et de graphiques.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégré.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie IV de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthodologie des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

JANUARY 1984

## Canada

The Consumer Price Index (CPI) for Canada stood at 120.2 (1981=100) in January 1984, up 0.5% from the December 1983 level of 119.6. The increase in the latest month was largely attributable to higher Food prices (up 1.9%) and Transportation costs (up 1.2%) and, to a lesser extent, to increased Housing charges (up 0.3%). Partially dampening the impact of those increases were price declines for Clothing (down 1.9%) and Recreation, Reading and Education (down 0.9%). The rise in food prices was the largest monthly increase since June 1982. In contrast, the All-items excluding Food index was virtually unchanged, increasing 0.1% between December 1983 and January 1984.

The year-over-year increase in the CPI as measured by comparing the index level of January 1984 to that of January 1983, rose by 5.3%, compared to the advance of 4.5% registered between December 1982 and December 1983. The acceleration in the latest twelve-month increase was principally attributable to the sharp rise in food prices between December 1983 and January 1984 and to the downward impact that the January 1983 reduction in the Petroleum Compensation Charge and price wars had on gasoline prices in that month, factors which were not repeated in January 1984.

The monthly increase of 1.9% in the Food index was largely attributable to higher fresh vegetable prices which, on average, were up 18.7% over December. The higher fresh vegetable prices were largely the result of lower supplies of salad-type vegetables attributable to cold weather conditions in the south-eastern growing areas of the United States and reduced domestic stocks of storable vegetables. Higher prices were also noted for soft drinks, due to the ending of holiday specials, certain beef and pork cuts and for fresh fruit. Fresh milk prices rose in several provinces, in part due to increases in provincially regulated producer prices. As a result of these increases, the Food Purchased from Stores index rose 2.3% in January, up 6.1% over its level of January 1983. The Food Purchased from Restaurants index advanced by 0.8% between December 1983 and January 1984 and was 3.9% above its level of January 1983. As a result, the aggregate Food index rose 5.6% over its level of January 1983, up from the increase of 3.9% registered between December 1982 and December 1983.

JANVIER 1984

## Canada

L'indice des prix à la consommation (IPC) du Canada s'est établi à 120.2 (1981=100) en janvier 1984, en hausse de 0.5% par rapport au niveau de 119.6 enregistré en décembre 1983. La progression du dernier mois est attribuable en grande partie au renchérissement des prix des aliments (+ 1.9%), des frais de transport (+ 1.2%) et, dans une mesure moindre, à l'accroissement des frais d'habitation (+ 0.3%). Les conséquences de ces hausses ont été tempérées par les baisses de prix observées pour les articles de la composante de l'habillement (- 1.9%) et de celle des loisirs, de la lecture et de la formation (- 0.9%). Les prix des aliments ont enregistré leur plus forte augmentation mensuelle depuis juin 1982. L'indice d'ensemble sans les aliments est, par ailleurs, demeuré pratiquement inchangé, n'augmentant que de 0.1% entre décembre 1983 et janvier 1984.

L'augmentation d'une année à l'autre de l'IPC mesurée en comparant l'indice de janvier 1984 à celui de janvier 1983 s'est établie à 5.3% comparativement à l'avance de 4.5% observée entre décembre 1982 et décembre 1983. L'accélération du dernier mouvement de douze mois a été principalement attribuable à la hausse marquée des prix des aliments entre décembre 1983 et janvier 1984 et à l'effet à la baisse que les réductions de janvier 1983 de la taxe d'indemnisation pétrolière et les guerres de prix ont exercé sur les prix de l'essence, situation qui ne s'est pas répétée en janvier 1984.

L'accroissement mensuel de 1.9% de l'indice des aliments a été en grande partie attribuable aux prix des légumes frais qui ont progressé de 18.7%, en moyenne, par rapport à décembre. La majoration des prix des légumes frais est imputable surtout à la diminution des stocks de légumes à salade en raison du gel dans les zones de culture du sud-est des États-Unis, ainsi qu'à la baisse des stocks canadiens de légumes d'entreposage. On a également constaté des hausses de prix pour les boissons gazeuses, imputables à la fin des soldes de la période des Fêtes, pour certaines coupes de boeuf et de porc et pour les fruits frais. Le prix du lait frais a été majoré dans plusieurs provinces à la suite notamment de l'augmentation des prix à la production décrétée par les provinces. Suite à ces augmentations, l'indice des aliments achetés au magasin a progressé de 2.3% en janvier, et de 6.1% par rapport à son niveau de janvier 1983. L'indice des aliments achetés au restaurant a avancé de 0.8% entre décembre 1983 et janvier 1984 et dépassait de 3.9% son niveau de janvier 1983. En conséquence, l'indice agrégatif des aliments a augmenté de 5.6% depuis janvier 1983, en hausse par rapport au taux de 3.9% enregistré entre décembre 1982 et décembre 1983.

The marginal increase of 0.1% in the All-items excluding Food index reflected the largely offsetting impacts of higher prices for certain energy-related items and lower prices resulting from seasonal promotions on certain goods and services. Fuel oil prices increased across the country while electricity charges rose in St. John's and in most cities in the provinces of Ontario and British Columbia. Retail prices for gasoline rose in most cities following increases in wholesale prices and, as well in Ontario cities, to an increase in the provincial gasoline tax. Higher local bus fares and water rates were also reported in several cities. Virtually offsetting the impact of these increases were decreases in the prices of most clothing items, reflecting the effect of post Christmas sales, and lower fares for package holiday trips. Between January 1983 and January 1984, the All-items excluding Food Index advanced 5.2%, up from the increase of 4.7% registered between December 1982 and December 1983.

Viewed in terms of goods and services, the price level for goods advanced 0.8% while that for services increased 0.1%. As a result, between January 1983 and January 1984, the price level for goods advanced 6.1% while that for services increased 4.3%.

On a seasonally-adjusted basis, the All-items index increased 0.8%; this comprised an increase of 1.9% in the Food index and an increase of 0.5% in the All-items excluding Food index. During the three-month period, October 1983 to February 1984, the All-items index rose at a seasonally-adjusted compounded annual rate of 5.7%, up from the increase of 4.9% registered in the three-months ending December 1983.

### City Highlights

Between December 1983 and January 1984, consumer price changes in cities for which CPI's are published, ranged from a decline of 0.2% in Québec to an increase of 0.9% in St. John's. The major factors accounting for the variation in city price movements were differing rates of price change for food and clothing. Food price increases ranged from 0.8% in Montréal to 2.9% in both Toronto and Thunder Bay, while clothing prices declined in ten of the fifteen cities. Other factors contributing to the variation in city price movements were higher electricity charges in St. John's and in the Ontario cities, increased water rates in St. John's and Calgary and higher local bus fares in Halifax, Saint John, Montréal, Toronto, Edmonton and Calgary. The decline in package holiday trips had a particular impact on flights originating in Québec and Ontario cities.

La poussée de 0.1% de l'indice d'ensemble sans les aliments est imputable surtout au renchérissement de certains produits énergétiques, ces hausses toutefois ayant été pratiquement annulées par les promotions saisonnières pour certains biens et services. Les prix du mazout ont augmenté partout au pays alors que les tarifs de l'électricité ont été majorés à St. John's et dans la plupart des villes de l'Ontario et de la Colombie-Britannique. Les prix de détails de l'essence ont également haussé dans la plupart des villes en raison de l'augmentation des prix de gros et, dans les villes de l'Ontario, de l'accroissement de la taxe provinciale sur l'essence. Les tarifs du transport en commun local et la taxe d'eau ont également augmenté dans plusieurs villes. Ces hausses de prix ont pratiquement été annulées par la baisse des prix de la plupart des vêtements sous l'effet des ventes d'après Noël et des voyages organisés tout compris. Entre janvier 1983 et janvier 1984, l'indice d'ensemble sans les aliments a avancé de 5.2%, en hausse par rapport à l'augmentation de 4.7% enregistrée entre décembre 1982 et décembre 1983.

Du point de vue des biens et services, les prix des biens ont avancé de 0.8% et ceux des services, de 0.1%. Le niveau des prix s'est donc élevé de 6.1% pour les biens et de 4.3% pour les services entre janvier 1983 et janvier 1984.

Après désaisonnalisation, l'indice d'ensemble a augmenté de 0.8% sous l'effet d'une hausse de 1.9% de l'indice des aliments et d'une poussée de 0.5% de l'indice d'ensemble sans les aliments. Au cours de la période de trois mois allant de octobre 1983 à janvier 1984, l'indice d'ensemble a affiché un taux composé annuel désaisonnalisé de 5.7%, en hausse par rapport au taux de 4.9% enregistré pour la période de trois mois terminée en décembre 1983.

### Points saillants des indices des villes

Entre décembre 1983 et janvier 1984, les prix à la consommation dans les villes pour lesquelles on produit un IPC ont fluctué, allant d'une baisse de 0.2% à Québec à une hausse de 0.9% à St. John's. Le principal facteur qui explique les différents taux de variation des prix d'une ville à l'autre est le mouvement inégal des prix des aliments et des vêtements. Les prix des aliments ont affiché des hausses variant de 0.8% à Montréal à 2.9% à Toronto et à Thunder Bay, alors que les prix des vêtements ont baissé dans dix villes sur quinze. Parmi les autres facteurs ayant contribué à la variation des mouvements de prix dans les villes, mentionnons la hausse des tarifs de l'électricité à St. John's et dans les villes de l'Ontario, l'accroissement de la taxe d'eau à St. John's et à Calgary et la montée des tarifs du transport en commun local par autobus à Halifax, Saint John, Montréal, Toronto, Edmonton et Calgary. La baisse des prix des voyages organisés tout compris a surtout été observée pour les vols en provenance du Québec et de l'Ontario.

FEBRUARY 1984

## Canada

The Consumer Price Index (CPI) for Canada stood at 120.9 (1981=100) in February 1984, up 0.6% from the January level of 120.2. The increase in the latest month was largely attributable to higher Food prices, resulting mainly from increased prices for fresh produce, and to a rise in Clothing prices, reflecting the ending of post-Christmas specials. The Food index advanced by 1.1% between January and February, the second consecutive month in which food prices have increased in excess of one percent. The All-items excluding Food index rose 0.5% in February, up from the 0.1% increase registered between December 1983 and January 1984.

The year-over-year increase in the CPI, as measured by comparing the index level of February 1984 to that of February 1983, was 5.5%, compared to the advance of 5.3% registered between January 1983 and January 1984. The slight acceleration in the year-over-year change resulted primarily from the sharp increase in food prices between January 1984 and February 1984 and from the downward impact that gasoline price wars had on the February 1983 index.

The increase of 1.1% in the Food index between January and February was largely attributable to higher prices for fresh produce and certain beef cuts. The increase in fresh produce prices primarily reflected the impact of reduced domestic stocks of storable produce and lower supplies of tomatoes. The ending of promotions for ground beef was largely responsible for the increase in beef prices. Higher prices were also noted for fresh milk, especially in the province of Ontario in part due to an increase in the provincially-regulated producer price, and for chicken. As a result of these increases, the Food Purchased from Stores index advanced by 1.6% in February, and was up 6.9% over its level of February 1983. The Food Purchased from Restaurants index advanced by 0.2% between January and February and was 4.1% above its level of February 1983. As a result, the aggregate Food index rose 6.1% over its level of February 1983, up from the increase of 5.6% registered between January 1983 and January 1984.

The increase of 0.5% in the All-items excluding Food index was largely attributable to the ending of January seasonal promotions for certain goods and services. Clothing prices, which had declined in January primarily as a result of post-Christmas sales, advanced by 2.3% in

FÉVRIER 1984

## Canada

L'indice des prix à la consommation (IPC) pour le Canada s'est établi à 120.9 (1981=100) en février 1984, en hausse de 0.6% par rapport au niveau de 120.2 enregistré en janvier. L'augmentation en février est en grande partie le résultat de la majoration des prix des aliments, imputable surtout à la montée des prix des fruits et légumes frais, et au renchérissement des vêtements en raison de la fin des soldes d'après-Noël. L'indice des aliments a avancé de 1.1% entre janvier et février, soit la deuxième augmentation mensuelle d'affilée de plus de un pour cent pour cet indice. L'indice d'ensemble sans les aliments a grimpé de 0.5% en février, en hausse par rapport à l'augmentation de 0.1% observée entre décembre 1983 et janvier 1984.

La progression d'une année à l'autre de l'IPC, calculée en comparant l'indice de février 1984 à celui de février 1983, a été de 5.5% comparativement à un taux de d'accroissement de 5.3% enregistré entre janvier 1983 et janvier 1984. La modeste accélération du taux de progression d'une année à l'autre s'explique principalement par la forte augmentation des prix des aliments entre janvier 1984 et février 1984, et par l'effet modérateur que les guerres de prix de l'essence avaient exercé sur l'indice de février 1983.

L'avance de 1.1% de l'indice des aliments entre janvier et février est imputable surtout au renchérissement des fruits et légumes frais et de certaines coupes de boeuf. L'accroissement des prix des fruits et légumes frais est la conséquence surtout de la diminution des stocks canadiens de fruits et légumes d'entreposage et de la baisse des stocks de tomates. Les prix du boeuf ont augmenté en raison surtout de la fin des soldes sur les prix du boeuf haché. Les prix du lait frais ont haussé, surtout en Ontario en raison notamment de l'augmentation des prix à la production régis par la province, et le poulet coûte plus cher. Sous l'effet de ces hausses, l'indice des aliments achetés au magasin a gagné 1.6% en février, pour dépasser de 6.9% son niveau de février 1983. L'indice des aliments achetés au restaurant a avancé de 0.2% entre janvier et février pour s'établir à un niveau dépassant de 4.1% celui de février 1983. En conséquence, l'indice agrégatif des aliments a gagné 6.1% sur son niveau de février 1983, en hausse par rapport à l'accroissement de 5.6% enregistré entre janvier 1983 et janvier 1984.

La progression de 0.5% de l'indice d'ensemble sans les aliments est attribuable principalement à la fin des soldes saisonniers de janvier sur certains biens et services. Les prix des vêtements, qui avaient baissé en janvier en raison des soldes d'après-Noël, ont augmenté de 2.3% en février à cause de la fin de ces soldes. On

February as these sales ended. As well, seasonally higher prices were reported for package holidays trips. Other factors contributing to the latest monthly increase in the All-items excluding Food index included higher electricity charges, especially in the province of Québec, and increased rented accommodation charges. Dampening the impact of these increases were lower charges for certain long-distance telephone calls in the provinces of Québec and Ontario, a reduction in gasoline prices and a decline in furniture prices. Between February 1983 and February 1984, the All-items excluding Food index advanced by 5.3%, virtually unchanged from the increase registered between January 1983 and January 1984.

Viewed in terms of goods and services, the price level for goods advanced 0.8% while that for services increased 0.3%. The increase in the goods index reflected the advances in food and clothing prices. As a result, between February 1983 and February 1984, the price level for goods advanced 6.5% while that for services increased 4.1%.

On a seasonally-adjusted basis, the All-items index increased 0.5%; this comprised an increase of 0.3% in the Food index and an increase of 0.7% in the All-items excluding Food index. During the three-month period, November 1983 to February 1984, the All-items index rose at a seasonally-adjusted compounded annual rate of 7.4%, up from the increase of 5.7% registered in the three-months ending January 1984. Part of the acceleration in the rate of increase in the latest period reflected the impact of gasoline price wars in the latter part of 1983.

### City Highlights

Between January and February, consumer price changes in cities for which CPI's are published, ranged from a decline of 0.7% in Winnipeg to an increase of 0.9% in Montréal. The major factors accounting for the variations in city price movements were differing rates of price change for food and clothing. Food prices declined by over one percent in Ottawa and Winnipeg but increased by over one percent in Charlottetown/Summerside, Québec, Montréal, Toronto and Vancouver. The decline in Winnipeg resulted from a food "price war" while in Ottawa, certain "staple" food items were heavily featured. Clothing prices increased by more than two percent in eight of the fifteen cities. Other factors contributing to the variation in city price movements included higher rent charges in Halifax, increased electricity charges in St. John's, Charlottetown/Summerside, Québec, Montréal and Toronto and higher prices for package holiday trips.

signale par ailleurs des augmentations saisonnières dans les prix des voyages organisés tout compris. Parmi les autres facteurs ayant contribué à la dernière augmentation mensuelle de l'indice d'ensemble sans les aliments, mentionnons la hausse des tarifs de l'électricité, surtout au Québec, et la montée des frais de logement en location. L'effet de ces hausses a été atténué par la baisse des tarifs de certains appels interurbains au Québec et en Ontario, le recul des prix de l'essence et la diminution des prix des meubles. Entre février 1983 et février 1984, l'indice d'ensemble sans les aliments a progressé de 5.3%, demeurant presque inchangé par rapport au taux de progression enregistré entre janvier 1983 et janvier 1984.

Du point de vue des biens et des services, les prix ont augmenté de 0.8% pour les biens et de 0.3% pour les services. La progression de l'indice des biens est le résultat du renchérissement des aliments et des vêtements. Le niveau des prix s'est donc élevé de 6.5% pour les biens et de 4.1% pour les services entre février 1983 et février 1984.

Après désaisonnalisation, l'indice d'ensemble a grimpé de 0.5% sous l'effet de l'augmentation de 0.3% de l'indice des aliments et de l'accroissement de 0.7% de l'indice d'ensemble sans les aliments. Au cours de la période de trois mois allant de novembre 1983 à février 1984, l'indice d'ensemble a affiché un taux de progression annuel composé désaisonnalisé de 7.4%, en hausse par rapport au taux de 5.7% enregistré pour la période de trois mois terminée en janvier 1984. L'accélération du taux d'augmentation au cours de la dernière période reflète en partie les conséquences des guerres de prix de l'essence durant la dernière partie de 1983.

### Points saillants des indices des villes

Entre janvier et février, les changements des prix à la consommation dans les villes pour lesquelles on produit un IPC se sont échelonnés entre une baisse de 0.7% à Winnipeg et une augmentation de 0.9% à Montréal. Le principal facteur qui explique les différents taux de variation des prix d'une ville à l'autre est le mouvement inégal des prix des aliments et des vêtements. Les prix des aliments ont reculé de plus de un pour cent à Ottawa et à Winnipeg mais ont gagné plus de un pour cent à Charlottetown/Summerside, Québec, Montréal, Toronto et Vancouver. À Winnipeg, la baisse est imputable à une "guerre de prix" sur les aliments, alors qu'à Ottawa, certains produits alimentaires "de base" ont été offerts à prix très réduits. Les prix des vêtements ont augmenté de plus de deux pour cent dans huit des quinze villes. Parmi les autres facteurs ayant contribué à la variation des mouvements de prix d'une ville à l'autre, mentionnons la montée des loyers à Halifax, l'accroissement des tarifs de l'électricité à St. John's, Charlottetown/Summerside, Québec, Montréal et Toronto, et l'augmentation des prix des voyages organisés tout compris.

MARCH 1984

## Canada

The Consumer Price Index (CPI) for Canada stood at 121.2 (1981=100) in March 1984, up 0.2% from the February level of 120.9. The increase in the latest month was largely attributable to higher Food prices and Housing charges and, to a lesser extent, to increased prices for Clothing and for Tobacco and Alcohol. Partially offsetting the impact of these increases was a decline in the Transportation component. The Food index advanced by 0.8% between February and March, following two months of increases in excess of one percent. The All-items excluding Food index rose 0.1% in March, down from the increase of 0.5% registered between January and February.

The year-over-year increase in the CPI, as measured by comparing the index of March 1984 to that of March 1983, was 4.7%, down from the advance of 5.5% registered between February 1983 and February 1984. The slowdown in the year-over-year change resulted primarily from the upward impact of the January 1983 increase in crude oil prices on the March 1983 All-items index which rose 1.0% compared to the March 1984 increase of 0.2%. Domestic crude oil prices have remained stable since that date reflecting the federal/provincial agreement governing the relationship between domestic crude oil prices and those established on the international market.

The increase of 0.8% in the Food index between February and March was largely attributable to higher fresh vegetable prices and to the ending of promotions on certain food items in several Québec and Ontario cities. Fresh vegetable prices rose, on average, 3.7% in the latest month and were up 46.1% over March 1983, reflecting the impact of weather conditions on the 1983 and early 1984 crops. Increased prices were noted for certain beef cuts, milk, bread, eggs, sugar and for soft drinks, primarily attributable to the ending of specials which were in effect in February in certain cities. Price increases were also noted for processed dairy products, largely attributable to the January increase in the federally-regulated producer price for industrial milk. Dampening the impact of these price increases were lower prices for chicken, certain pork cuts and for fresh fruit. The Food Purchased from Stores index advanced 1.0% between February and March and was up 8.3% over its level of March 1983. The Food Purchased from Restaurants index advanced by 0.4% in March and was up 4.4% over its March 1983 level. As a result, the aggregate Food index rose 7.3% over its

MARS 1984

## Canada

L'indice des prix à la consommation (IPC) pour le Canada s'est établi à 121.2 (1981=100) en mars 1984, en hausse de 0.2% par rapport au niveau de 120.9 enregistré en février. L'augmentation en mars est en grande partie le résultat de la majoration des prix des aliments et des frais d'habitation et, dans une mesure moindre, de l'accroissement des prix des vêtements et des tabacs et boissons alcoolisées. Ces hausses ont été en partie contrebalancées par le recul de la composante des transports. L'indice des aliments a avancé de 0.8% entre février et mars; cet accroissement fait suite à deux augmentations mensuelles d'affilée de plus de un pour cent. L'indice d'ensemble sans les aliments a grimpé de 0.1% en mars, en baisse par rapport à l'augmentation de 0.5% observée entre janvier et février.

La progression d'une année à l'autre de l'IPC, calculée en comparant l'indice de mars 1984 à celui de mars 1983, a été de 4.7%, en baisse par rapport à un taux d'accroissement de 5.5% enregistré entre février 1983 et février 1984. Le ralentissement de la variation d'une année à l'autre résulte surtout de l'impact de l'accroissement des prix du pétrole brut en janvier 1983 sur l'indice d'ensemble de mars 1983 qui avait augmenté de 1.0% comparativement à 0.2% en mars 1984. Les prix du pétrole brut canadien sont restés stables depuis cette date à la suite de l'entente fédérale/provinciale qui a établi les prix du pétrole brut canadien en relation aux prix du marché international.

L'augmentation de 0.8% de l'indice des aliments entre février et mars est imputable surtout au renchérissement des légumes frais et à la fin des soldes sur certains produits alimentaires dans plusieurs villes du Québec et de l'Ontario. Les prix des légumes frais ont grimpé en moyenne de 3.7% au cours du dernier mois et dépassent de 46.1% ceux de mars 1983, les récoltes de 1983 et du début de 1984 ayant souffert du mauvais temps. La majoration des prix de certaines coupes de boeuf, du lait, du pain, des oeufs, du sucre et des boissons gazeuses est attribuable surtout à la fin des soldes en vigueur dans certaines villes en février. Des hausses de prix ont également été observées pour les produits laitiers transformés, en raison surtout de l'augmentation en janvier des prix à la production régis par le gouvernement fédéral pour le lait de transformation. En contrepartie, il y a eu baisse de prix pour le poulet, certaines coupes de porc et pour les fruits frais. L'indice des aliments achetés au magasin a avancé de 1.0% entre février et mars pour dépasser de 8.3% son niveau de mars 1983. L'indice des aliments achetés au restaurant a gagné 0.4% en mars pour s'établir à un niveau dépassant de 4.4% celui de mars 1983. En conséquence, l'indice agrégatif des aliments a gagné 7.3% sur

level of March 1983, up from the increase of 6.1% registered between February 1983 and February 1984.

In the All-items excluding Food index, lower gasoline prices, resulting from the impact of price wars in certain New Brunswick and Ontario cities, virtually offset the impact of all of the reported price increases. Slightly higher prices were noted for household furnishings and equipment, paper products, certain women's and men's clothing items and for package holiday trips. Beer prices rose in Québec and Ontario, while cigarette prices rose in Saskatchewan and British Columbia. Between March 1983 and March 1984, the All-items excluding Food index advanced by 4.0%, down significantly from the increase of 5.3% registered between February 1983 and February 1984. The deceleration primarily reflected the impact of the relatively stable crude oil prices which have prevailed since March 1983, as noted earlier.

Viewed in terms of goods and services, the price level for both goods and services advanced by 0.2%. As a result, between March 1983 and March 1984, the price level for goods advanced by 5.1% while that for services increased by 4.0%.

On a seasonally-adjusted basis, the All-items index declined by 0.1%; this comprised a 0.9% increase in the Food index and a decline of 0.4% in the All-items excluding Food index. During the three-month period, December 1983 to March 1984, the All-items index rose at a seasonally-adjusted compounded annual rate of 4.9%, down from the increase of 7.4% registered in the three months ending February 1984.

### City Highlights

Between February and March consumer price changes, in cities for which CPI's are produced, registered no overall change in St. John's and Calgary but increased by 0.8% in Ottawa. The larger than national average increase in Ottawa was primarily due to higher food prices reflecting the ending of certain specials which had resulted in a decline in food prices in February. Lower electricity charges in St. John's and a decline in shelter costs in Calgary helped dampen the overall price changes in those cities. Telephone charges increased in St. John's but declined in Vancouver. Gasoline prices declined in Toronto but increased in Thunder Bay. Vehicle insurance premiums rose in Vancouver while local transit fares increased in Winnipeg. Higher beer prices were reported in all Québec and Ontario cities.

son niveau de mars 1983, en hausse par rapport à l'accroissement de 6.1% enregistré entre février 1983 et février 1984.

Quant à l'indice d'ensemble sans les aliments, la baisse des prix de l'essence occasionnée par les guerres de prix dans certaines villes du Nouveau-Brunswick et de l'Ontario a pratiquement annulé toutes les hausses de prix signalées. Des majorations de prix ont été observées pour les articles d'ameublement et accessoires, les articles en papier, certains vêtements pour hommes et pour femmes et les voyages organisés tout compris. Les prix de la bière ont augmenté au Québec et en Ontario, alors que ceux des cigarettes ont grimpé en Saskatchewan et en Colombie-Britannique. Entre mars 1983 et mars 1984, l'indice d'ensemble sans les aliments a progressé de 4.0%, ce qui est nettement inférieur à l'accroissement de 5.3% observé entre février 1983 et février 1984. Le ralentissement du taux de progression est imputable principalement à la stabilité relative des prix du pétrole brut comme depuis mars 1983 signalé plus haut.

Du point de vue des biens et des services, les prix ont augmenté de 0.2% pour les biens comme pour les services. Le niveau des prix s'est donc élevé de 5.1% pour les biens et de 4.0% pour les services entre mars 1983 et mars 1984.

Après désaisonnalisation, l'indice d'ensemble a reculé de 0.1% sous l'effet de l'augmentation de 0.9% de l'indice des aliments et de la diminution de 0.4% de l'indice d'ensemble sans les aliments. Au cours de la période de trois mois allant de décembre 1983 à mars 1984, l'indice d'ensemble a affiché un taux de progression annuel composé désaisonnalisé de 4.9%, en baisse par rapport au taux de 7.4% enregistré pour la période de trois mois terminée en février 1984.

### Points saillants des indices des villes

Entre février et mars, les prix à la consommation observés dans les villes pour lesquelles on produit un IPC sont demeurés globalement inchangés à St. John's et à Calgary, mais ont augmenté de 0.8% à Ottawa. Si les prix ont augmenté plus vite que la moyenne nationale à Ottawa, c'est surtout en raison du renchérissement des aliments imputable à la fin de certains soldes qui, en février, avaient fait baisser les prix des aliments. La baisse des tarifs de l'électricité à St. John's et la diminution des frais de logement à Calgary ont contribué à modérer le changement global des prix dans ces deux villes. Les tarifs du téléphone ont augmenté à St. John's mais ont baissé à Vancouver. Les prix de l'essence ont reculé à Toronto mais ont avancé à Thunder Bay. Les primes d'assurance-automobile ont grimpé à Vancouver alors que les tarifs du transport en commun local ont augmenté à Winnipeg. Des augmentations de prix pour la bière ont été relevés dans toutes les villes du Québec et de l'Ontario.

## January, February and March in Retrospect

The All-items Consumer Price Index (CPI) for Canada increased by 1.3% between December 1983 and March 1984 (first quarter) reaching a level of 121.2 (1981=100) in March 1984 compared to 119.6 recorded in December 1983. The increase in the latest quarter exceeded the advance of 0.9% observed in the preceding period, September to December 1983 (fourth quarter) but was only marginally higher than the increase of 1.2% reported in the corresponding first quarter, 1983.

Approximately three-fifths of the 1.3% increase in the All-items index was attributable to higher food prices. Food prices rose 3.8% in the latest quarter, up from the increase of 0.9% registered in the previous quarter. By contrast, the All-items excluding Food index rose 0.7% in the latest quarter, down marginally from the increase of 0.9% recorded in the fourth quarter of 1983. As a result, the rise in Food prices was entirely responsible for the acceleration in the rate of price change in the All-items index between the fourth quarter of 1983 and the first quarter of 1984.

The rise of 3.8% in the Food index of the latest period resulted from advances of 4.9% and 1.4% respectively in the prices of Food purchased from Stores and Food purchased from Restaurants respectively. A considerable proportion of the latest increase was attributable to higher prices for fresh vegetables (up 35.7% in the first quarter) reflecting, in part, the impact of the adverse weather conditions in 1983 on domestic grown storage-type vegetables and of the Florida and Texas freeze in December 1983 on salad-type vegetables. Prices of dairy products also advanced as several provinces increased the provincially-regulated support price for fresh fluid milk. Beef prices rose largely due to adverse weather in the United States which curtailed marketings and caused weight gains to slow down.

Over one half of the latest 0.7% increase in the All-items excluding Food index resulted from higher Housing charges (up 0.9%). Some considerable part of the overall advance was also attributable to higher Clothing prices (up 1.3%). The combined impact of the changes in the other major component indexes on the All-items excluding Food index was minimal.

The Housing index rose by 0.9% in the first quarter down slightly from the increase of 1.1% registered in the preceding quarter. Much of the increase in the latest quarter was attributable to higher household operation charges particularly for

## Janvier, février et mars en rétrospective

L'indice d'ensemble des prix à la consommation (IPC) pour le Canada a augmenté de 1.3% de décembre 1983 à mars 1984 (premier trimestre), passant de 119.6 en décembre 1983 à 121.2 (1981=100) en mars 1984. La progression enregistrée au dernier trimestre est supérieure à l'avance de 0.9% observée pour la période précédente, de septembre à décembre 1983 (quatrième trimestre), mais dépasse à peine l'augmentation de 1.2% signalée au premier trimestre de 1983.

Environ trois cinquièmes de l'accroissement de 1.3% de l'indice d'ensemble s'expliquent par la montée des prix des aliments. Les prix des aliments ont été majorés de 3.8% au premier trimestre, en hausse par rapport à l'augmentation de 0.9% enregistrée au trimestre précédent. Par contre, l'indice d'ensemble sans les aliments a grimpé de 0.7% au premier trimestre, soit une légère baisse par rapport à l'augmentation de 0.9% constatée au quatrième trimestre de 1983. En conséquence, la montée des prix des aliments explique en totalité l'accélération du taux de progression de l'indice d'ensemble entre le quatrième trimestre de 1983 et le premier trimestre de 1984.

La progression de 3.8% de l'indice des aliments au cours de la dernière période résulte de l'accroissement de 4.9% des prix des aliments achetés au magasin et du renchérissement de 1.4% des aliments achetés au restaurant. Une part importante de la dernière augmentation est attribuable à la montée des prix des légumes frais (en hausse de 35.7% au premier trimestre) en raison, notamment, du mauvais temps en 1983 qui a eu des conséquences néfastes sur les légumes d'entreposage cultivés au Canada, et du gel en Floride et au Texas en décembre 1983 qui a nui aux légumes à salade. Les prix des produits laitiers ont également avancé, plusieurs provinces ayant augmenté le prix de soutien à la production pour le lait entier frais. Les prix du boeuf se sont accrus surtout en raison du mauvais temps dans les États-Unis qui a écourté la période de mise en marché et ralenti l'engraissement.

Plus de la moitié de la dernière augmentation de 0.7% de l'indice d'ensemble sans les aliments résulte de l'accroissement des frais d'habitation (plus 0.9%). Une bonne part de l'avance globale est par ailleurs attribuable à la montée des prix des vêtements (plus 1.3%). Les autres composantes ont exercé globalement un effet minime sur l'indice d'ensemble sans les aliments.

L'indice de l'habitation a grimpé de 0.9% au premier trimestre ce qui représente un léger ralentissement par rapport au gain de 1.1% enregistré au trimestre précédent. L'augmentation du dernier trimestre est largement attribuable à l'accroissement des dépenses de ménage, notamment

electricity and fuel oil. Rented and owned accommodation charges also increased, the latter due mainly to higher new house prices and repair charges. Other more noticeable price advances were recorded for furniture, appliances and selected household paper products. Telephone charges declined as lower long-distance telephone rates were introduced in several provinces.

Clothing prices increased 1.3% in the first quarter following a rise of 0.5% reported in the previous quarter. The increase in the Clothing index during the previous three quarters has been relatively stable and weak averaging 0.5% per quarter. The sharp advance in the latest quarter resulted mainly from women's coats and jackets, suits and dresses accompanied by men's coats, jackets and furnishings. Some of the increases identified with the latest period was attributable, in part, to prices returning to normal levels in February and March after recording seasonal declines associated with the Christmas season in the two previous months.

The Transportation index registered virtually no change in the latest quarter compared to 0.9% increase reported in the previous quarter and as a result played a major role in moderating the overall increase registered by the All-items excluding Food index. The marginal increase (up 0.1%) in the latest period was primarily due to the downward impact of declining gasoline prices which took the form of localized "price wars". On average gasoline prices fell in February and March to the extent that the index in March was down 1.1% compared to its level of December 1983. Offsetting the decline in gasoline prices were higher local transit fares, increased vehicle insurance premiums and, in some provinces, higher vehicle registration fees and drivers' licenses.

The price performance of the other major component indexes impacted only marginally on the All-items excluding Food index in the first quarter 1984. The Health and Personal Care index rose 1.1% mainly due to higher prices for prescribed medicines and for certain personal care services and supplies. The Tobacco and Alcohol index advanced 0.6% mainly reflecting higher prices for beer purchased from stores traceable largely to higher wholesale prices or manufacturers' costs. The Recreation, Reading and Education index increased by 0.3% largely owing to higher prices for certain home recreational equipment and increased subscription rates for newspapers. Part of the overall upward pressure on this index was offset by lower charges, on average, for trips.

les tarifs de l'électricité et les prix du mazout. Les frais de logement en location et en propriété ont également augmenté, la progression étant attribuable dans le dernier cas au relèvement des prix des maisons neuves et des frais de réparation. Des hausses de prix plus importantes ont été enregistrées pour les meubles, les appareils ménagers et certains articles ménagers en papier. Les tarifs du téléphone ont diminué sous l'effet de la baisse des tarifs interurbains dans plusieurs provinces.

Les prix des vêtements ont augmenté de 1.3% au premier trimestre, comparativement à un gain de 0.5% au trimestre précédent. Le taux de progression de l'indice de l'habillement durant les trois trimestres précédents a été relativement stable et modeste, atteignant en moyenne 0.5% par trimestre. Les grands responsables de la forte augmentation au premier trimestre sont les manteaux, vestes, tailleurs et robes pour femmes, ainsi que les manteaux, vestons et articles vestimentaires pour hommes. Certaines augmentations observées au cours de la dernière période s'expliquent par le fait que les prix sont revenus à la normale en février et en mars, après avoir diminué au cours des deux mois précédents sous l'effet des soldes de Noël.

L'indice des transports, qui avait augmenté de 0.9% au trimestre précédent, n'a pratiquement pas bougé au premier trimestre et a donc exercé un effet modérateur notable sur l'indice d'ensemble sans les aliments. La faible hausse (plus 0.1%) au cours de la dernière période est en grande partie la conséquence du fléchissement des prix de l'essence sous l'effet des "guerres de prix" localisées. En moyenne, les prix de l'essence ont tellement chuté en février et en mars que l'indice de mars était en baisse de 1.1% par rapport à son niveau de décembre 1983. En contrepartie de la baisse des prix de l'essence, le transport en commun local coûte plus cher, les primes d'assurance automobile ont été majorées et, dans certaines provinces, les droits d'immatriculation et de permis de conduire ont haussé.

Les indices des autres composantes n'ont guère influé sur l'indice d'ensemble sans les aliments au premier trimestre de 1984. L'indice de la santé et des soins personnels a gagné 1.1% en raison surtout de la majoration des médicaments sur ordonnance et de certains services et produits de soins personnels. L'indice des tabacs et boissons alcoolisées a avancé de 0.6% surtout parce que les prix de la bière achetée au magasin ont augmenté sous l'effet surtout de la montée des prix de gros et des coûts de fabrication. L'indice des loisirs, de la lecture et de la formation a augmenté de 0.3% par suite surtout de la hausse du matériel récréatif au foyer et des tarifs d'abonnement aux journaux. La poussée exercée sur cet indice a été contrebalancée en partie par la baisse, en moyenne, des prix des voyages organisés tout compris.

TABLE 1. Consumer Price Indexes for Canada, Major Components and Selected Special Aggregates (Not Seasonally Adjusted), 1981=100

(1) Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.

(2) Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.

(3) Whitehorse n'est pas inclus dans les moyennes pondérées des villes.

(4) Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.

(5) Les prix du haut de ronde sont relevés à St.-John's, Toronto, London, Saskatoon, Vancouver et Victoria.

(6) Chicoutimi (450 g), Québec (900 g).

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e. price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for twenty-six cities are available at present in Part IV of this publication. Inter-spatial indexes covering approximately two-thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the March to April 1982 price change, the weights used in the Consumer Price Index are those pertaining to 1978 expenditure patterns. Data used for establishing these patterns were obtained through the 1978 Family Expenditure Surveys. The expenditures are those reported by all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1978 revealed 64 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 64 urban centres into 31 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour vingt-six villes, à la Partie IV de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter d'avril 1982, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1978. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1978. Les dépenses sont celles qu'ont déclarées tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1978, 64 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 64 centres urbains en 31 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 15 of these centres which, together, accounted for approximately 70% of the total 1978 current consumption expenditures reported in the 64 centres. These 15 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 400 commodities are priced in each of these 15 cities while in the remaining 49 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

## Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

## Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 15 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1978 par les 64 centres. Les 15 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 400 produits dans chacune des 15 villes; ce nombre est plus faible dans les 49 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

## Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

## Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1974 family expenditure patterns were used to compile the CPI from October 1978 to March 1982. In April 1982 the 1974 weights were replaced by those derived from the expenditure patterns of 1978. With the introduction of the 1974 weights, Statistics Canada adopted a policy to update weights on a regular four-year cycle.

La composition des dépenses des familles de 1974 a servi au calcul de l'IPC à partir d'octobre 1978 jusqu'à mars 1982. En avril 1982, les pondérations de 1974 ont été remplacées par d'autres dérivées de la composition des dépenses de 1978. Depuis l'introduction des pondérations de 1974, Statistique Canada a comme politique de mettre à jour les pondérations régulièrement à tous les quatre ans.

**TEXT TABLE 1. Comparison of 1974 and 1978 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada**

**TABEAU EXPLICATIF 1. Comparaison des pondérations des dépenses de 1974 et de 1978 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada**

Major components Composantes principales	Weights 1974 Pondérations	Weights 1978 Pondérations
All-items - Ensemble	100.00 <sup>1</sup>	100.00 <sup>1</sup>
Food - Aliments	21.49	21.11
Housing - Habitation	34.06	35.37
Clothing - Habillement	10.12	9.55
Transportation - Transports	15.84	16.26
Health and personal care - Santé et soins personnels	3.96	3.71
Recreation, reading and education - Loisirs, lecture et formation	8.29	8.61
Tobacco and alcohol - Tabacs et boissons alcoolisées	6.24	5.39

<sup>1</sup> Figures may not add up due to rounding.

<sup>1</sup> Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table 1 represent expenditures in 1974 (1974 quantities valued in 1974 prices) and in 1978 (1978 quantities valued in 1978 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981=100 time base. The methodology required to permit such a re-aggregation can be obtained on request by contacting the:

Consumer Prices Section  
Prices Division, Statistics Canada  
Ottawa, Ontario  
K1A 0T6  
(Telephone: (613) 995-4078)

Les pondérations du tableau explicatif 1 représentent les dépenses en 1974 (quantités et prix de 1974) et en 1978 (quantités et prix de 1978). Elles ne peuvent servir à reconstituer ni à composer des indices sur la base de 1981=100. La méthode à suivre pour une telle reconstitution peut être obtenue sur demande auprès de la:

Section des prix à la consommation  
Division des prix, Statistique Canada  
Ottawa (Ontario)  
K1A 0T6  
(Téléphone: (613) 995-4078)

The indexes based on 1978 weights were linked or connected in March 1982 to the appropriate indexes based on 1974 weights which had been in use since October 1978. This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Les indices fondés sur les pondérations de 1978 ont été enchaînés ou raccordés en mars 1982 aux indices correspondants fondés sur les pondérations de 1974, en usage depuis octobre 1978. Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

## Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981=100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981=100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every ten years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971=100 or 1981=100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights, which will continue to relate to 1978. Furthermore, the method employed in converting to the 1981=100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

## Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 3 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level and raising it to an annual rate (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", *Retail Prices and Living Costs - Service Bulletin* (Catalogue 62-005), Vol. 4, No. 4, April 1975.

## Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981=100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981=100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les dix ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971=100 et 1981=100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base, qui resteront celles de 1978. De plus, la méthode de conversion selon la base 1981=100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

## Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 3 consiste à prendre un taux de croissance composé sur le niveau désaisonné des trois derniers mois et à le porter à un taux annuel (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", *Prix de détail et coût de la vie - Bulletin de service* (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

## Reconstructed Indexes

With the release of the April 1982 Consumer Price Index, certain series were reconstructed historically to reflect more closely the Standard Commodity Classification system and the Family Expenditure categories of Statistics Canada. For further details see **The Consumer Price Index Reference Paper, Concepts and Procedures, Updating based on 1978 Expenditure**, Catalogue 62-553 (occasional).

## Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

## Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978 (the current expenditure reference period for the official CPI), 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres are not included in the calculation of the official CPI for Canada. These two centres will be included in the next Updating of the CPI at which time the 1982 expenditure patterns will be incorporated.

## Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation d'octobre 1978, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent plus fidèlement le système de la Classification type des produits et les catégories des Dépenses des Familles établis par Statistique Canada. Pour plus de renseignements, voir le **"Document de référence de l'indice des prix à la consommation, concepts et procédés, mise à jour fondée sur les dépenses de 1978, n° 62-553 au catalogue (hors-série).**

## Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

## Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978 (année de référence actuelle des dépenses pour l'IPC officiel), les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains ne sont pas compris dans le calcul de l'IPC officiel pour le Canada. Ces deux centres seront pris en compte lors de la prochaine mise à jour, lorsque la composition des dépenses de 1982 sera incorporée à l'IPC.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the fifteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two month lag.

#### **Additional Information and Related Publications**

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1978 Expenditures, Concepts and Procedures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in three volumes: **Urban Family Food Expenditure, 1978**, Catalogue 62-548; **Family Expenditure in Canada, 1978**, Catalogue 62-550; and **Family Expenditure in Canada, All Canada, Urban and Rural, 1978**, Catalogue 62-551.

The latest information on the Consumer Price Index for Canada and fifteen cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available on request. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-995-4078 or 613-995-4096).

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des quinze autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

#### **Reenseignements supplémentaires et publications connexes**

Le **"Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1978, concepts et procédés"** (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans trois volumes distincts: **Dépenses alimentaires des familles urbaines, 1978**, n° 62-548 au catalogue; **Dépenses des familles au Canada, 1978**, n° 62-550 au catalogue; et **Dépenses des familles au Canada, ensemble du Canada: régions urbaines et rurales, 1978**, n° 62-551 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de quinze villes sont publiés dans le bulletin mensuel **"L'indice des prix à la consommation"**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont offerts sur demande. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6, (613-995-4078 ou 613-995-4096).

## Appendix 2

### THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 ( $100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$  cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 4) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

## Appendice 2

### LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents ( $100 \text{ cents} \times \frac{100.0}{114.6} = 87.3 \text{ cents}$ ). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (Tableau 4) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

## Appendix 3

### SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then returns to its original level. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement in one direction over a long period. It reflects continuing rather than changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the subject.<sup>1</sup> Rather than reiterating those texts, an outline of the methodologies

## Appendice 3

### LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, puis revient à son niveau initial. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable orienté dans une même direction sur une longue période. Elle reflète la continuité de l'économie plutôt que l'évolution des facteurs économiques.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question<sup>1</sup>. Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des

employed in the derivation of seasonally-adjusted consumer price indexes for Canada is provided below.

Prior to the latest updating of expenditure patterns, seasonal adjustment of the Consumer Price Index was carried out at the item level using the ARIMA (Auto-Regressive Integrated Moving Average) model of the X-11 Seasonal Adjustment programme.<sup>2</sup> The resulting seasonally-adjusted item series were then analyzed to assess the quality of the seasonal adjustment process. Those series not satisfying the criteria for seasonal adjustment, as established by Statistics Canada, were left unadjusted. The seasonally-adjusted and unadjusted item series were then combined to obtain seasonally-adjusted aggregates. The weighting pattern used in this aggregation process related only to the most current reference period for expenditure weights. Monthly percent changes were published for three aggregates only, All-items, Food, All-items excluding Food, for the period commencing with the official introduction of the current expenditure weights.

The above procedure resulted in the All-items, Food and All-items excluding Food percentage changes being influenced by only a relatively small number of seasonally-adjusted item indexes as both the irregular component and the incidence of moving seasonality seriously affected the item indexes. Furthermore, with regular updating of expenditure patterns now occurring once every four years, the time series using "unlinked" indexes is too short for valid seasonal adjustment. As a result, a comprehensive review of the methodology to be used in the seasonal adjustment of the CPI is currently being undertaken. Pending the outcome of this review and in order to provide interested users with seasonally-adjusted percentage changes, seasonal adjustment using published unadjusted data for the period 1971 to present is being carried out "directly" for the All-items, Food and All-items excluding Food indexes. Users should note that this procedure may cause the change in the All-items index to fall slightly outside the range of the two component indexes.

The seasonal factors obtained by this method for those three series are shown in the following table starting in January 1975.

- <sup>1</sup> Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.
- <sup>2</sup> The X-11 ARIMA seasonal adjustment method. Statistics Canada Cat. 62-564.

méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avant la dernière mise à jour de la composition des dépenses, la désaisonnalisation de l'indice des prix à la consommation a été réalisée au niveau de l'article grâce au modèle ARIMA (auto-régressif à moyenne mobile intégrée) du programme de désaisonnalisation X-11.<sup>2</sup> Les séries d'articles ainsi obtenues ont ensuite été analysées pour évaluer la qualité du processus de désaisonnalisation. Les séries qui ne répondaient pas aux critères de désaisonnalisation, établis par Statistique Canada, n'ont pas été désaisonnalisées. Les séries désaisonnalisées et non désaisonnalisées ont ensuite été combinées pour obtenir des agrégats désaisonnalisés. Le schéma de pondération utilisé pour ce processus d'agrégation portait uniquement sur la période de référence la plus récente pour les pondérations des dépenses. Les variations mensuelles en pourcentage ont été publiées pour trois agrégats seulement, soit l'indice d'ensemble, l'indice des aliments et l'indice d'ensemble sans les aliments, pour la période débutant avec l'introduction officielle des pondérations des dépenses courantes.

En raison de la procédure susmentionnée, seulement un nombre relativement petit d'indices d'articles désaisonnalisés ont influé sur les variations en pourcentage de l'indice d'ensemble, de l'indice des aliments et de l'indice d'ensemble sans les aliments, les indices d'articles ayant été sensiblement affectés à la fois par les mouvements accidentels et par les fréquentes fluctuations saisonnières. De plus, puisque la mise à jour de la composition des dépenses doit désormais se faire à tous les quatre ans, la série chronologique utilisant des indices "non enchaînés" est trop brève pour permettre une désaisonnalisation valide. En conséquence, on est en train de revoir entièrement les méthodes qui seront utilisées pour la désaisonnalisation de l'IPC. En attendant le résultat de cette revue et afin de fournir aux utilisateurs intéressés des variations en pourcentage désaisonnalisées, la désaisonnalisation à l'aide des données non désaisonnalisées publiées pour la période de 1971 jusqu'à aujourd'hui est effectuée "directement" pour l'indice d'ensemble, l'indice des aliments et l'indice d'ensemble sans les aliments. Les utilisateurs doivent prendre note qu'en raison de cette procédure, la variation de l'indice d'ensemble peut tomber un peu à l'extérieur de l'étendue des deux indices composantes.

Les coefficients saisonniers obtenus par cette méthode pour ces trois séries figurent dans le tableau suivant à partir de janvier 1975.

- <sup>1</sup> L'étude technique n° 12 de Julius Shiskin et de Harry Eisenpress "Seasonal Adjustments by Electronic Computer Methods", National Bureau of Economic Research, New York, 1958.
- <sup>2</sup> La méthode de désaisonnalisation X-11 ARIMA. Statistique Canada, Cat. 62-564.

TABLE 1. Seasonal Adjustment Factors for All-items, Food and All-items excluding Food Indexes, Canada, 1978 to 1984(1)

TABEAU 1. Facteurs saisonniers pour l'indice d'ensemble, l'indice des aliments et l'indice d'ensemble sans les aliments, Canada, 1978 à 1984(1)

	January - Janvier	February - Février	March - Mars	April - Avril	May - Mai	June - Juin	July - Juillet	August - Août	September - Septembre	October - Octobre	November - Novembre	December - Décembre
ALL-ITEMS - ENSEMBLE												
1978	99.70	99.77	100.04	99.80	100.14	100.23	100.30	100.22	100.00	99.99	100.04	99.72

1) With the release of the December Consumer Price Index, the seasonal factors are revised for the previous five years.

1) À compter de l'émission de l'indice des prix à la consommation de décembre, les facteurs saisonniers sont révisés pour les cinq années précédentes.

## Appendix 4

### CITY AVERAGE RETAIL PRICES

#### 1. Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

Grocery stores are defined, for purposes of this Survey, as those with meat sales values at between 15% and 50% of total sales. Sales data are derived from Census of Merchandising information, updated, where necessary, by local advice from Statistics Canada Regional Offices.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

#### 2. Calculation Methodology

##### (a) City Prices

Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices

## Appendice 4

### PRIX DE DÉTAIL MOYENS PAR VILLE

#### 1. Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Aux fins de cette enquête, les épiceries étaient définies comme celles dont les ventes de viande représentaient entre 15% et 50% du total des ventes. Les données des ventes sont dérivées à partir des données du recensement des marchandises, mises à jour, lorsque nécessaire, sur recommandation des bureaux régionaux de Statistique Canada.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

#### 2. Méthode de calcul

##### a) Prix urbains

Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article

obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

#### **(b) Weighted City Averages**

A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

### **3. Item Specifications**

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

#### **b) Moyennes pondérées des villes**

Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

### **3. Spécification des articles**

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

**CITY AVERAGE RETAIL PRICES - ITEM SPECIFICATIONS**

**Detailed Specification**

**Beef**

**Sirloin steak.** Cut from section of hind quarter next to short loin, bone-in or bone-out, fresh, Canada A or B brand, 1 kg.

**Round steak.** Full cut of section of hind quarter next to rump, fresh, Canada A or B brand, **boneless**, 1 kg.

**Prime rib roast.** Standing, bone-in, short cut, any ribs within the first five of standard seven, fresh, Canada A or B brand, 1 kg.

**Blade roast (blade out).** Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

**Blade roast (blade in).** Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

**Stewing beef.** Boneless stewing beef, fresh, Canada A or B brand, 1 kg.

**Ground beef, regular.** Ground beef, with 24% to 30% fat content, fresh, 1 kg.

**Pork**

**Bacon.** Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line, 500 g.

**Pork, centre cut chops.** Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, 1 kg.

**Pork, butt roast.** Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boneless Butt**, 1 kg.

**Pork, butt roast.** Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boston Butt**, 1 kg.

**PRIX DE DÉTAIL MOYENS PAR VILLE - SPÉCIFICATIONS DES ARTICLES**

**Spécification détaillée**

**Boeuf**

**Bifteck de surlonge.** Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou désossé, frais, marque Canada A ou B, 1 kg.

**Bifteck dans la ronde.** Coupe entière d'une section du quartier de derrière voisine de la croupe, frais, marque Canada A ou B, **désossé**, 1 kg.

**Rôti de côtes de choix.** Nature, non désossé, coupe courte, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, 1 kg.

**Rôti de palette (désossé).** Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

**Rôti de palette (non désossé).** Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

**Boeuf à ragoût.** Désossé, boeuf à ragoût, frais, marque Canada A ou B, 1 kg.

**Boeuf haché régulier.** Boeuf haché, matières grasses: 24% à 30%, frais, 1 kg.

**Porc**

**Bacon.** Marques des fabricants largement distribuées (sauf les marques des magasins), bacon de flanc, fumé, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité, 500 g.

**Porc, côtelettes, partie du centre.** Coupe provenant du centre de la longe, fraîches, non désossées, parées, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, 1 kg.

**Porc, rôti de porc.** Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, **rôti désossé**, 1 kg.

**Porc, rôti de porc.** Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, **"Boston Butt"**, 1 kg.

## Other Meat

**Wieners.** Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, 454 g.

## Poultry

**Chicken.** Eviscerated, fresh or frozen, broiler or fryer, whole, 1 to 2 kg, Grade A, price per kg.

## Fish

**Cod filets.** Generally available manufacturers' brands (store brands excluded), frozen, 454 g. package.

**Salmon.** Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 220 g. tin.

## Dairy Products

**Milk.** Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 litre.

**Milk 2%.** Fresh 2% M.F. partly skimmed milk, pasteurized and may contain vitamins "A" and "D". Disposable carton of 1 litre.

**Butter.** Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 454 g.

**Cheese.** Generally available manufacturers' brands (store brands excluded), process cheese food square slices, with skim milk powder and/or whey powder added, plain without seasoning or condiments, individually wrapped, 250 g.

**Powdered milk.** Generally available manufacturers' brands (store brands excluded), powdered skim milk, 1.5 kg. card-board package, may be pasteurized or vitaminized.

**Evaporated milk.** Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 ml. can.

**Eggs.** Large eggs, Grade A, in a carton of 1 dozen.

## Autre viande

**Saucisses de Francfort.** Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, 454 g.

## Volaille

**Poulet.** Vidé, frais ou congelé, à griller ou à frire, entier, de 1 à 2 kg, catégorie A, vendu au kg.

## Poisson

**Filets de morue.** Marques des fabricants largement distribuées (sauf les marques des magasins), congelés, paquet de 454 g.

**Saumon.** Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 220 g.

## Produits laitiers

**Lait.** Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 litre (en carton), non consigné.

**Lait 2%.** Lait frais, partiellement écrémé, 2% de matières grasses de lait, pasteurisé, pouvant être additionné de vitamines A ou D. Contenant de 1 litre (en carton), non consigné.

**Beurre.** Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 454 g.

**Fromage.** Marques des fabricants largement distribuées (sauf les marques des magasins), préparation de fromage fondu, tranches carrées avec lait écrémé en poudre et (ou) poudre de lactosérum, sans assaisonnement, ni condiment, enveloppées individuellement, 250 g.

**Lait en poudre.** Marques des fabricants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 1.5 kg, peut être pasteurisé ou vitaminé.

**Lait évaporé.** Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 ml.

**Oeufs.** Oeufs de grosse taille, catégorie A, en boîte de 12.

## Bakery and Cereal Products

**Flour, 2.5 kg.** Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types.

**Macaroni.** Generally available manufacturers' brands (store brands excluded) dry, tubular shape macaroni, 500 g package.

**Corn flakes.** Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package.

**Bread.** Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

**Bread.** Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

**Soda crackers.** Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 450 g.

## Fruit

**Bananas.** First grade, price per kg.

**Grapefruit.** United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per kg.

**Oranges.** California, medium size (138 or 113) price per kg.

**Orange juice.** Generally available manufacturers' brands (store brands excluded), unsweetened or 5% sugar added, 1.36 litre.

## Vegetables

**Cabbage.** Fresh, domestic or imported, green cabbage, good quality, price per kg of an average size head.

**Carrots.** Tops completely removed, good quality, in plastic or cellophane packages price per kg.

**Celery.** Celery stalks, green, fresh, may be trimmed or clipped, price per kg.

**Lettuce.** Fresh head, green, good quality, average size head, price per kg.

**Onions.** Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages price per kg.

## Céréales et produits de boulangerie

**Farine, 2.5 kg.** Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prêtamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine.

**Macaroni.** Marques des fabricants largement distribuées (sauf les marques des magasins), macaroni, forme tubulaire, paquet de 500 g.

**Flocons de maïs.** Marques des fabricants largement distribuées (sauf les marques des magasins), maïs en flocons, paquet de 675 g.

**Pain.** Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

**Pain.** Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

**Biscuits soda.** Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 450 g.

## Fruits

**Bananes.** Première qualité, vendues au kg.

**Pamplemousses.** Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix au kg.

**Oranges.** De Californie, grosseur moyenne (138 ou 113) prix au kg.

**Jus d'orange.** Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré ou additionné de 5% de sucre, boîte de 1.36 litre.

## Légumes

**Choux.** Frais, variété canadienne ou importée, choux vert, bonne qualité, prix au kg d'un chou de grosseur moyenne.

**Carottes.** Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane, vendues au kg.

**Céleri.** Pieds de céleri, verts, frais, peuvent être taillés, prix au kg.

**Laitue.** Fraîche, verte, bonne qualité, taille moyenne, prix au kg.

**Oignons.** Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane, vendus au kg.

## Vegetables - Concluded

**Potatoes.** Table potatoes, white, Canada No. 1, 4.54 kg.

**Turnips.** May be waxed, good quality, price per kg.

**French fried potatoes.** Generally available manufacturers' brands (store brands excluded), frozen, straight or regular cut, grade A or fancy, 1 kg. poly bag.

**Beans.** Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 398 ml.

**Tomatoes, canned.** Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 796 ml.

**Tomato juice.** Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 1.36 litre.

## Sugar and Sweets

**Sugar.** White, granulated, cane or beet sugar, bag of 2 kg.

## Beverages

**Coffee, roasted.** Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 369 g. bag.

**Coffee, instant.** Generally available manufacturers' brands (store brands excluded), dried coffee, extract soluble, pure or may have added dextrin, dextrose or maltose, 283 g.

**Tea bags.** Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 60 two-cup paper bags (227 g.).

## Fats

**Shortening.** Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 454 g.

## Légumes - fin

**Pommes de terre.** Pommes de terre de table, à chair blanche, catégorie Canada n<sup>o</sup> 1, sac de 4.54 kg.

**Navets.** Peuvent être cirés, bonne qualité, prix au kg.

**Pommes de terre frites.** Marques des fabricants largement distribuées (sauf les marques des magasins), congelées, coupe ordinaire ou droite, catégorie A ou de fantaisie, sac de 1 kg. en matière plastique.

**Fèves au lard.** Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 398 ml.

**Tomates, en conserve.** Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 796 ml.

**Jus de tomates.** Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 1.36 litre.

## Sucre et produits sucrés

**Sucre.** Blanc, cristallisé, de canne ou de betterave, sac de 2 kg.

## Boissons

**Café torréfié.** Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sac de 369 g.

**Café instantané.** Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 283 g.

**Thé en sachets.** Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 60 sachets de papier pour deux tasses chacun (227 g.).

## Matières grasses

**Graisse végétale.** Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100%. Peut être partiellement hydrogénée, carton de 454 g.

## Miscellaneous Groceries

**Tomato ketchup.** Generally available manufacturers' brands (store brands excluded), made from juice of ripe tomatoes, sugar, vinegar and seasonings, 1 litre bottle.

**Soup.** Generally available manufacturers' brands (store brands excluded) of vegetable soup, 284 ml.

**Infants' food.** Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 128 ml.

**Peanut butter.** Generally available manufacturers' brands (store brands excluded), made from roasted peanuts; may be labelled smooth or creamy, 500 g.

**Starch powder.** Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 85 g.

**Soft drinks.** Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. On bottle of 750 ml.

## Appliances and Personal Care Items

**Synthetic detergent powder.** Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 6 litres.

**Facial Tissue.** Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 20.6 cm x 23.9 cm.

**Bathroom Tissue.** Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, one or two ply sheets. Units of 4, about 600 to 650 sheets per roll, approx. 20.6 cm x 12.7 cm, wrapped in poly.

**Toothpaste.** Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 100 ml.

**Bar soap.** Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in multiple units of three or four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

## Articles divers d'épicerie

**Ketchup aux tomates.** Marques des fabricants largement distribuées (sauf les marques des magasins), fait de jus de tomates mûres, de sucre, de vinaigre et d'assaisonnements, bouteille de 1 litre.

**Soupe.** Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte de 284 ml.

**Nourriture pour bébés.** Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 128 ml.

**Beurre d'arachides.** Marques des fabricants largement distribuées (sauf les marques des magasins), fait à partir d'arachides torréfiées; l'étiquette peut porter la mention "crèmeux", 500 g.

**Poudre à gelée.** Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 85 g.

**Boissons gazeuses.** Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 ml.

## Fournitures et articles de soins personnels

**Détergent synthétique en poudre.** Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 6 litres.

**Papier mouchoir.** Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double épaisseur, taille approximative de 20.6 cm x 23.9 cm.

**Papier hygiénique.** Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, simple ou double épaisseur. Paquets de 4, d'environ 600 à 650 feuilles par rouleau, 20.6 cm x 12.7 cm, enveloppés dans du polyéthylène.

**Pâte dentifrice.** Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 100 ml.

**Savon de toilette.** Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en groupe de trois ou quatre pains par paquet. Les savons de taille pour invité ou de bain, de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

## Supplies and Personal Care Items - Concluded

### Tobacco

**Cigarettes.** Generally available popular brands, king size, filter tip, carton of 200.

#### 4. Average Retail Prices for Gasoline

Tables 14 through 19 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the fifteen urban centres for which Consumer Price Indexes are produced and cover the time period January 1982 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

#### 5. Average Retail Prices for Fuel Oil

Table 20 presents average retail prices for fuel oil. The information is collected on a quarterly basis as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 20 are confined to the fifteen urban centres for which Consumer Price Indexes are produced and for the time period January 1982 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

## Fournitures et articles de soins personnels - fin

### Tabacs

**Cigarettes.** Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

#### 4. Prix de détail moyens de l'essence

Les tableaux 14 à 19 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux quinze centres urbains pour lesquels on produit un I.P.C. pour la période allant de janvier 1982 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

#### 5. Prix de détail moyens du mazout

Le tableau 20 présente les prix de détail moyens du mazout. Cette information est relevée à chaque trimestre dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 20 se limitent aux quinze centres urbains pour lesquels on produit un I.P.C. pour la période allant de janvier 1982 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

## Appendix 5

### CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 21 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.<sup>1</sup>

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

## Appendice 5

### COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 21 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville<sup>1</sup> pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

<sup>1</sup> See Table 13 and Appendix 4.

<sup>1</sup> Voir tableau 13 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

#### FOOTNOTES FOR TABLE 21

- (2) The weights shown are rounded 1978 weights as contained in the report *The Consumer Price Index, Reference Paper, Updating Based on 1978 Expenditures, Concepts and Procedures, (Occasional), Catalogue 62-553*. They are provided for illustration only: the weights actually used are combined cities weights with adjustments for price change since 1978.
- (3) Does not include water, fuel and electricity.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

#### NOTES POUR LE TABLEAU 21

- (2) Les poids indiqués sont les poids pour 1978 figurant dans *L'Indice des prix à la consommation, document de référence, mise à jour fondée sur les dépenses de 1978, concepts et procédés (hors-série), n° 62-553 au catalogue*. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinées ajustés en fonction des variations des prix observées depuis 1978.
- (3) Ne comprend pas l'eau, le combustible et l'électricité.

## Appendix 6

### INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

## Appendice 6

### COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post index should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

For the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada.

Groupe principal de produits	Nombre d'articles dont le prix est relevé (lorsque disponibles)
Aliments consommés à la maison	104
Repas pris à l'extérieur	9
Entretien et services ménagers	11
Fournitures ménagères	8
Communication	3
Aide-domestique (dépendant de l'endroit)	2-8

ANALYTICAL CONSUMER PRICE INDEX FOR LOW-  
INCOME FAMILIES AND UNATTACHED INDIVIDUALS

INDICE ANALYTIQUE DES PRIX À LA CONSOMMATION DES  
FAMILLES ET DES PERSONNES SEULES À FAIBLE REVENU

Comparison of Consumer Price Indexes for Canada, for the Official  
C.P.I. and Low-income C.P.I. (1981=100)

Comparaison des indices des prix à la consommation pour le Canada,  
officiel et pour les ménages à faible revenu (1981=100)

Introduction and Summary

Since 1980, the January-March issues of **Consumer Prices and Price Indexes** (Catalogue 62-010) have featured a Supplement containing the latest results of the analytical Consumer Price index for low-income families and unattached individuals. The January-March 1984 issue of this publication continues that practice by updating the results to the end of 1983. Effective with this release, the same base has been converted from September 1978=100 to 1981=100, consistent with the official time base for the Consumer Price Index (CPI). Rebasng is strictly an arithmetic procedure which although changes the index levels neither alters the historical or current percentage changes, other than minimal differences due to rounding.

Between 1982 and 1983, on an annual basis, the low-income CPI increased at about the same rate as the official CPI, registering an increase of 5.9% as compared to an advance of

Introduction et résumé

Depuis 1980, le numéro de **Prix à la consommation et indices des prix** (n° 62-010 au catalogue) de janvier-mars comprend un supplément sur les derniers résultats d'un IPC analytique établi pour les familles et les personnes seules à faible revenu. Le numéro de janvier-mars 1984 de cette publication continue cette pratique en présentant des résultats mis à jour allant jusqu'à la fin de 1983. La base de référence, qui était septembre 1978=100, devient 1981=100 à compter du présent numéro, soit la même base que l'indice des prix à la consommation (IPC) officiel. Le changement de base est strictement une procédure arithmétique qui n'influe en rien sur les changements en pourcentage chronologiques ou courants, à part quelques différences minimales attribuables à l'arrondissement. Même si le niveau des indices change.

Entre 1982 et 1983, sur la base d'une moyenne annuelle, l'IPC des ménages à faible revenu a affiché à peu près le même taux de progression que l'IPC officiel, augmentant de 5.9 % contre 5.8 %

5.8% for the official CPI. Over the time period under review, September 1978 to December 1983, this marks the first year in which the annual average increase in the low-income CPI has been greater than that of the official CPI. The reversal in the relationship between these two indexes was largely attributable to the Housing component. The Housing component, given its relative importance in the low-income CPI and its rate of change in 1983, exerted upward pressure on the low-income CPI and offset the downward impact exerted by the Food component.

Over the time period September 1978 (the first month for which the low-income CPI is available) to December 1983, the low-income CPI increased by 56.5%, as compared to an advance of 59.7% registered in the official CPI. The difference in growth rates increased throughout most of the period September 1979 to December 1981, remained relatively stable throughout 1982 and decreased marginally in 1983.

#### Data Sources and Aggregation

For purposes of this study, low-income families and unattached individuals are defined as those who live in urban centres with 30,000 or more inhabitants and whose income limits correspond to the "low-income cut-offs" produced by Statistics Canada.

The Consumer Price Index for Low-income Families and Unattached Individuals is a weighted average of price indexes for the same elementary commodity groups<sup>2</sup> that are used in the official CPI series. The low-income expenditure patterns used to aggregate these price series were derived from the same urban family expenditure surveys used to derive the official weights and were constructed using the same methodologies (see the January-March 1983 Supplement).

pour l'IPC officiel. Pour la période considérée soit de septembre 1978 à décembre 1983, c'était la première fois que l'augmentation annuelle moyenne de l'IPC des ménages à faible revenu dépassait celle de l'IPC officiel. Le renversement du rapport entre les deux indices est attribuable dans une large mesure à la composante de l'habitation. Cette composante, compte tenu de son importance relative dans l'IPC des ménages à faible revenu et de son taux de variation en 1983, a exercé une poussée sur l'IPC des faibles revenus et a contrebalancé l'effet modérateur exercé par la composante des aliments.

Durant la période allant de septembre 1978 (premier mois pour lequel l'indice des prix à la consommation pour les familles et personnes seules à faible revenu est disponible) jusqu'à décembre 1983, l'IPC pour les familles et personnes seules à faible revenu a avancé de 56.5%, comparativement à l'avance de 59.7% enregistrée par l'IPC officiel. La différence dans les taux de progression s'est accrue durant la majeure partie de la période septembre 1979 à décembre 1981, est demeurée relativement stable durant 1982 pour enfin décroître de façon marginale en 1983.

#### Sources et agrégation des données

Dans le cadre de cette étude, on définit les familles et les personnes seules à faible revenu comme celles qui vivent dans des centres urbains de 30,000 habitants ou plus et qui ont une limite de revenu qui correspond aux "seuils de faible revenu" calculés par Statistique Canada<sup>1</sup>.

L'indice des prix à la consommation des familles et des personnes seules à faible revenu est une moyenne pondérée des indices de prix pour les mêmes groupes de produits élémentaires<sup>2</sup> que ceux utilisés pour l'IPC officiel. Les schémas des dépenses pour l'IPC à faible revenu utilisés pour faire l'agrégation de ces séries de prix ont été tirés des mêmes enquêtes sur les dépenses des familles urbaines et celles utilisées pour dériver les pondérations officielles et ont été calculés en utilisant les mêmes méthodes (voir supplément de janvier-mars 1983).

<sup>1</sup> For more details on "low-income cut-offs" see Appendix to **Income Distributions by Size in Canada, 1980**, Statistics Canada, Catalogue 13-207, Annual.

<sup>2</sup> An elementary commodity group is the lowest-level class of goods and services for which a consistent set of value weights is available (normally derived from the Family Expenditure Surveys).

<sup>1</sup> Pour une explication détaillée des "seuils de faible revenu", voir l'Appendice de la **Répartition du revenu au Canada selon la taille du revenu, 1980**, Statistique Canada no. 13-207, catalogue, annuel.

<sup>2</sup> Par groupe élémentaire de produits, on entend le plus petit agrégat de biens et services pour lequel on peut obtenir un ensemble cohérent de pondérations en valeur (normalement tirées des Enquêtes sur les dépenses des familles).

## Analysis of Differences in 1978 Expenditure Weights Between the Two Indexes

There are significant differences between the 1978 expenditure weights (expressed in March 1982 prices) used in the aggregation of the official CPI and those used to produce the low-income CPI. Table 1 shows that, of the seven major components, the low-income weights are higher than those of the official CPI for three components. Two of these components have the largest weights. Food expenditures, as a relative proportion of total expenditures, are much larger for the low-income group than they are for the official CPI (28.7% vs. 21.2%). Furthermore, the weight of Housing in the low-income index is significantly larger (39.1% vs. 34.3%) and the importance of the sub-aggregates within Housing is different compared to the official index. More specifically, the Shelter weight for the low-income group is 17.1% larger than the Shelter weight for the official CPI, but even more important are the differences relating to the weights of Rented accommodation and Owned accommodation. In the low-income CPI, Rented accommodation accounts for 64.2% of the weight of Shelter, while Owned accommodation has a share of 35.4%. In the official CPI series, on the other hand, Rented accommodation is 31.6% of the Shelter weight, and Owned accommodation is 66.3%. Health and personal care expenditures, as a relative proportion of total expenditures, are slightly larger for the low-income group than they are for the official CPI (3.8% vs. 3.5%).

The other four major components have smaller relative expenditures in the low-income CPI. Transportation exhibits by far the largest difference, with the relative expenditure of the low-income CPI amounting to only somewhat more than one-half of the official CPI weight (10.7% vs. 18.2%). Moreover, in the low-income index, Private transportation accounts for 77.6% of the total weight of Transportation, while Public transportation accounts for 22.4%. In the official CPI series, Private transportation accounts for 87.9%, and Public transportation, 12.1% of the total weight for Transportation. Other lower relative expenditures for the low-income CPI are found in the Clothing component (6.9% vs. 9.1%) and in Recreation, reading and education (5.8% vs. 8.1%).

## Analyse des différences dans les pondérations basées sur les dépenses de 1978 pour les deux indices

Les pondérations basées sur les dépenses de 1978 (exprimées en prix de mars 1982) utilisées pour établir l'IPC officiel diffèrent sensiblement de celles qui ont servi à produire l'IPC pour les ménages à faible revenu. Il ressort en effet du tableau 1 que les pondérations de l'indice des ménages à faible revenu sont plus élevées que celles de l'IPC officiel pour trois composantes. Les pondérations de deux de ces composantes sont de loin les plus importantes. Ainsi, la part des dépenses alimentaires dans l'ensemble des dépenses est beaucoup plus forte pour le groupe à faible revenu que pour l'IPC officiel (28.7 % contre 21.2 %). De plus, les pondérations de la composante de l'habitation sont passablement plus élevées dans l'indice des ménages à faible revenu (39.1 % contre 34.3 %) et l'importance relative des sous-agrégats de cette composante n'est pas la même que dans l'indice officiel. Plus précisément, les pondérations du logement pour le groupe à faible revenu sont supérieures de 17.1 % à ceux pour l'IPC officiel. La différence la plus remarquable concerne néanmoins les pondérations du logement en location et celles du logement en propriété. Dans le cas de l'IPC des ménages à faible revenu, le logement en location figure pour 64.2 % de la pondération du logement et le logement en propriété, pour 35.4 %. Dans celui de l'IPC officiel, par contre, le logement en location intervient pour 31.6 % de la pondération du logement et le logement en propriété, pour 66.3 %. Les dépenses de santé et de soins personnels, en proportion des dépenses totales, sont légèrement plus élevées pour le groupe à faible revenu que pour l'IPC officiel (3.8 % contre 3.6 %).

Dans les quatre autres composantes principales, les dépenses relatives des ménages à faible revenu sont inférieures à celle de l'IPC officiel. La composante des transports est de loin celle qui présente la différence la plus marquée. Ainsi, les dépenses relatives à ce titre exprimées dans l'IPC des ménages à faible revenu ne représentent qu'un peu plus de la moitié de celles de l'IPC officiel (10.7 % contre 18.2 %). En outre, le transport privé compte pour 77.6 % de la pondération totale des transports dans l'indice concernant les faibles revenus, et le transport public, pour 22.4 %; dans l'IPC officiel, les chiffres correspondants s'élèvent respectivement à 87.9% et 12.1 %. La part relative des dépenses des ménages à faible revenu est également inférieure dans la composante de l'habillement (6.9 % contre 9.1 %) et dans la composante des loisirs, de la lecture et de la formation (5.8 % contre 8.1 %).

<sup>3</sup> Does not add to 100.0% because it excludes "All other accommodation", which includes expenditures on such services as Vacation homes.

<sup>3</sup> Les pourcentages ne totalisent pas 100.0 % parce que l'élément "tout autre logement", qui englobe notamment les dépenses relatives aux maisons de villégiature, n'entre pas dans le calcul.

## Analysis of Low-income and Official CPI Percentage Changes Between 1982 and 1983

On an annual basis, comparing the average of the monthly indexes for 1983 to those for 1982, the official All-items CPI increased by 5.8%, while the low-income All-items CPI increased by 5.9%. This was the first time since 1979 that the increase in the annual average for the low-income All-items CPI was larger than the one registered by the official All-items CPI. Between 1981 and 1982, 1980 and 1981, and 1979 and 1980 the official CPI increased by 10.8%, 12.5% and 10.2%, respectively, while the low-income CPI advanced by 9.9%, 11.6% and 9.6%.

The monthly and annual average index levels for both the official CPI and the low-income CPI for the period January 1981 to December 1983 are presented in Table 2<sup>4</sup>. The percentage changes between the average annual index levels are shown in Table 3.

The factors relevant to explaining differences between indexes that have distinct expenditure patterns are numerous, and the methodology adopted for analyzing such factors is quite complex. Readers wishing to explore in greater detail the reasons underlying the differences between these two indexes are asked to refer to the Section entitled "Supplementary Analysis of Index Differences," located at the end of this text.

Consistent with the approach utilized in the previous studies, the following analysis focuses primarily on the use of annual average index levels for 1982 and 1983 in comparing the behaviour of the official and low-income CPI's. This is done in order to provide a more stable perspective for the years analyzed.

For the third consecutive year, the Food component had the impact of moderating the increase in the low-income CPI relative to the official index. This is because the increase in the Food index was lower than that of the All-items index, while its expenditure weight is considerably larger in the low-income index than in the official CPI. Furthermore, the Food index increase in the low-income index was less than it was in the official CPI. All of the other major components (Housing; Clothing; Transportation; Health and personal care; Recreation, reading

## Analyse des variations en pourcentage de l'IPC ménages à faible revenu entre et de l'IPC officiel entre 1982 et 1983.

Sur une base annuelle, c'est à dire si l'on compare la moyenne des indices mensuels de 1983 à celle de 1982, l'IPC d'ensemble officiel a progressé de 5.8% alors que celui des ménages à faible revenu a avancé de 5.9 %. C'était la première fois depuis 1979 que l'augmentation annuelle moyenne de l'IPC d'ensemble des ménages à faible revenu dépassait celle de l'IPC d'ensemble officiel. Entre 1981 et 1982, 1980 et 1981, et 1979 et 1980, l'IPC officiel avait augmenté respectivement de 10.8 %, 12.5 % et 10.2 %, alors que l'IPC des faibles revenus gagnait 9.9 %, 11.6 % et 9.6 %.

Le tableau 2<sup>4</sup> présente les niveaux mensuels annuels moyens de l'IPC officiel et de l'IPC des ménages à faible revenu pour la période allant de janvier 1981 à décembre 1983. Le tableau 3, par sa part, donne les variations en pourcentage entre les niveaux annuels moyens des indices.

Pour expliquer les différences entre les indices ayant des schémas de dépenses distincts, il faut tenir compte de nombreux facteurs et les analyser en utilisant une méthodologie passablement complexe. Les lecteurs désireux d'approfondir les raisons des différences entre les deux indices sont priés de consulter la section intitulée "Analyse supplémentaire des écarts entre les indices" à la fin du présent supplément.

Selon l'approche utilisée au cours des études précédentes, l'analyse qui suit utilise surtout les niveaux annuels moyens des indices en 1982 et 1983 en vue de comparer l'évolution de l'IPC officiel de l'IPC des ménages à faible revenu. On procède ainsi pour donner une image plus stable des années observées.

Pour une troisième année d'affilée, la composante des aliments a contribué à modérer la progression de l'IPC des ménages à faible revenu par rapport à celle de l'IPC officiel. Ceci est attribuable au fait que l'indice des aliments a augmenté moins rapidement que l'indice d'ensemble et que le poids des aliments est considérablement plus élevé dans l'indice des faibles revenus que dans l'IPC officiel. En outre, l'augmentation de l'indice des aliments a été moindre dans l'indice des faibles revenus que dans l'IPC officiel. Toutes les autres composantes principales (habitation; habillement; transports; santé et soins

education; and Tobacco and alcohol) had the effect of contributing to a larger increase in the low-income index relative to the official CPI. Of these components, housing had the most significant impact on the difference between the two indexes. The housing index increase was larger than that of the All-items index, while its expenditure weight in the low-income index is larger than that in the official CPI. The impact of these factors, in combination, would increase the low-income CPI at a faster rate than that of the official CPI. Furthermore, the housing index increase in the low-income index was larger than it was in the official CPI, thereby exerting an even stronger influence on the low-income index relative to the official CPI. Given that the expenditure weights of the remaining major components are relatively small and that their annual price movements were not much larger than that of the official CPI, with the exception of tobacco and alcohol, the upward impact of these components on the low-income CPI relative to the official CPI was marginal.

It should be noted that, since the 1974-1978-weighted indexes have been linked, contributions to the aggregate price change cannot be unequivocally estimated. Since "linked" or chain indexes are computed using more than one "basket," there can be no single expression of the importance of each particular sub-aggregate.<sup>5</sup> The above analysis of the year 1983 over 1982, therefore, can only depict the general direction of sub-aggregates in relation to the overall level of the All-items index. This is due to the fact that the first three months of 1982 incorporated the 1974-weighted basket, whereas the other months in 1982 and all the months in 1983 utilized the 1978-weighted basket. Any month after March 1982 can be directly compared to any other month after this date because these months are contained in the 1978-weighted basket. It is therefore possible to do a quantitative analysis of the difference between the two All-items indexes of December 1983 compared to the same month one year earlier, as follows.

Between December 1982 and December 1983 the All-items low-income CPI increased by 4.3%, compared to an advance of 4.5% registered for the official CPI. Among the seven major components, the Food component was the only one responsible for slowing down the increase between December 1982 and December 1983 in the low-income CPI relative to the official CPI, as explained earlier.

personnels; loisirs, lecture et formation; tabacs et boissons alcoolisées) ont contribué à faire avancer l'indice des ménages à faible revenu plus rapidement que l'IPC officiel. Parmi ces composantes, l'habitation a été celle qui a le plus contribué à creuser l'écart entre les deux indices. La progression de l'indice de l'habitation a dépassé celle de l'indice d'ensemble, alors que le poids des dépenses d'habitation est plus élevé dans l'indice des faibles revenus que dans l'IPC officiel. La conjugaison de ces facteurs est de nature à faire augmenter l'IPC des faibles revenus plus vite que l'IPC officiel. De plus, la composante de l'habitation a avancé plus vite dans l'indice des faibles revenus que dans l'IPC officiel, donnant par le fait même encore plus d'impulsion à l'indice des faibles revenus. Quant aux autres composantes, leurs poids sont relativement faibles et leurs mouvements de prix annuels ne dépassent guère celui de l'IPC officiel (à l'exception des tabacs et boissons alcoolisées), de sorte que la poussée qu'elles ont exercée sur l'IPC des faibles revenus par rapport à l'IPC officiel a été minime.

On doit noter que puisque les indices pondérés sur l'année 1974 et ceux pondérés sur l'année 1978 ont été enchaînés, leurs contributions à un mouvement de prix agrégé ne peuvent être évaluées. Puisque les indices-chaines sont calculés d'après plusieurs "paniers", il n'existe pas de formule unique pour exprimer l'importance relative de chaque sous-agrégat. L'analyse qui précède de l'année 1983 par rapport à l'année 1982 ne peut donc qu'illustrer la tendance générale des sous-agrégats par rapport au niveau global de l'indice d'ensemble. Ceci est dû au fait que les trois premiers mois de 1982 sont incorporés dans le panier pondéré de 1974 tandis que les autres mois de 1982 et 1983 sont utilisés dans le panier pondéré de 1978. Tout mois après mars 1982, peut se comparer exactement à n'importe quel autre mois après cette date, puisque ces mois sont pris en compte dans le panier pondéré de 1978. Cela a rendu possible l'analyse quantitative suivante qui se penche sur les différences entre les deux indices d'ensemble de décembre 1983 par rapport à ceux du mois correspondant un an plus tôt.

Entre décembre 1982 et décembre 1983, l'IPC d'ensemble des faibles revenus a gagné 4.8 %, comparativement à une avance de 4.5 % enregistrée pour l'IPC officiel. Sur les sept composantes, la composante des aliments a été la seule à freiner l'augmentation entre décembre 1982 et décembre 1983 de l'IPC des ménages à faible revenu par rapport à l'IPC officiel, comme il est expliqué plus tôt.

<sup>5</sup> See Section 6.5 of The Consumer Price Index Reference Paper, Concepts and Procedures - Updating Based on 1978 Expenditures, Statistics Canada, Catalogue 62-553.

<sup>5</sup> Voir la section 6.5 du Document de référence de l'indice des prix à la consommation: Concepts et procédés, mise à jour fondée sur les dépenses de 1978, Statistique Canada n° 62-553 au Catalogue.

The Housing component was the major component principally responsible for the higher increase between December 1982 and December 1983 in the low-income CPI relative to the increase in the official CPI. There are two reasons why the Housing component had this impact. Firstly, its increase was larger than that of the All-items index and its weight is larger in the low-income index, and, secondly, its increase was also larger in the low-income CPI than it was in the official CPI index. This latter result was largely attributable to "rent", which has a substantially larger weight in the low-income index than it has in the official CPI.

The rates of increase for both the Clothing and Transportation were lower than that registered in the All-items index; while the expenditure shares for these components in the low-income CPI are less than the corresponding shares in the official CPI. These two factors, in conjunction, exerted less of a downward impact on the low-income CPI relative to the official index.

The Tobacco and alcohol component appears to contribute in moderating the increase in the low-income CPI relative to the official index. The increase in the Tobacco and alcohol component is greater than that of the All-items index, while its expenditure weight is lower in the low-income index. These two factors, in combination, would have the effect of increasing the low-income CPI at a slower rate than that of the official CPI. The increase in the low-income Tobacco and alcohol component, however, is higher than the increase registered in the official Tobacco and alcohol component, with the net result that the Tobacco and alcohol component contributed to a higher increase in the low-income index relative to the official index.

Given that the expenditure weights of the remaining two major components (Health and personal care, and Recreation, reading and education) are quite small, their impact in pushing the increase in the low-income index above the official index was relatively minor.

## Conclusion

The annual increases registered in 1983 for the official CPI and the low-income CPI were virtually identical. These results are contrary to the widely-held opinion that those with low-incomes experience higher rates of general price change than those experienced by the population covered by the

La composante de l'habitation a été la principale responsable de l'augmentation plus rapide de l'IPC des faibles revenus comparativement à l'IPC officiel en décembre 1983, par rapport à décembre 1982. La poussée exercée par la composante l'habitation s'explique de deux façons. D'abord, cette composante a augmenté plus vite que l'indice d'ensemble et son poids est plus important dans l'indice des faibles revenus; ensuite, l'augmentation de cette composante dans l'IPC des faibles revenus a dépassé l'augmentation correspondante dans l'IPC officiel. Le résultat est surtout attribuable au "loyer" qui a un poids beaucoup plus important dans l'indice des faibles revenus que dans l'IPC officiel.

Les taux d'augmentation enregistrés pour l'habillement et les transports ont été moins élevés que celui de l'indice d'ensemble; alors que la part des pondérations de ces composantes est moins élevée dans l'IPC des faibles revenus que celle de l'IPC officiel. Ces deux facteurs, pris ensemble, ont exercé un effet modérateur moindre dans l'IPC des faibles revenus que dans l'IPC officiel.

La composante des tabacs et boissons alcoolisées a semblé contribuer à modérer l'augmentation de l'IPC des faibles revenus par rapport à l'IPC officiel. L'augmentation de la composante des tabacs et boissons alcoolisées est plus grande que celle de l'indice d'ensemble, alors que sa pondération est plus faible pour l'indice des faibles revenus. Ces deux facteurs combinés auraient comme effet d'augmenter l'IPC des faibles revenus à un rythme moins rapide que celui de l'IPC officiel. L'augmentation de la composante des tabacs et boissons alcoolisées a toutefois été plus élevée pour l'indice des faibles revenus que pour l'IPC officiel, si bien que la composante des tabacs et boissons alcoolisées a contribué à hausser la progression de l'indice des faibles revenus par rapport à l'indice officiel.

Puisque les pondérations sur les dépenses des deux autres composantes principales (santé et soins personnels et loisirs, lecture et formation) sont très faibles, elles ont eu un effet relativement peu important quant à la poussée qu'elles ont exercé pour rendre l'augmentation de l'indice des faibles revenus plus élevée que celle de l'IPC officiel.

## Conclusion

En 1983, l'IPC officiel et l'IPC des ménages à faible revenu ont enregistré une augmentation à peu près identique. Ces résultats contredisent l'opinion courante selon laquelle la hausse des prix frappe plus durement les ménages à faible revenu que l'ensemble de la population visée par l'IPC officiel. Toutefois, compte tenu de

Official CPI. Given the source and nature of these changes, however, one index can be above or below the other during certain periods of time. Over the long run, however, it is expected that differences between these indexes would be minimal, as explained in "Supplementary Analysis of Index Differences".

In interpreting the results of the low-income indexes, it should be realized that there are limitations to the low-income index. These limitations prevent this analytical CPI from being as definitive a measure of consumer price changes for low-income families and unattached individuals as the official CPI is for all families and unattached individuals. One of the major limitations is that the prices used to calculate the low-income index are the same price series that are used in the official CPI. These prices may not necessarily be representative of the prices paid for purchases made by low-income families and unattached individuals. For example, changes in subsidized prices for such elements of the low-income budget as rents and pharmaceuticals may differ from changes in the market prices for the same items collected for the official CPI. In addition, it is quite possible that low-income groups purchase some goods and services in different types of retail outlets than those in which prices are collected for the official CPI; thus, the changes in prices in these outlets may be different from those used in the official CPI. Also, the low-income group might purchase commodities that are different in quality or unit of quantity. While it is not that these limitations do not invalidate the results of these experimental indexes, the fact remains that the magnitude of the impact of these limitations is unknown.

It should be emphasized that the results of this study are, in essence, statistical in nature. This study does not address the issue of the ability of various population groups to cope with the effects of inflation.

The Prices Division of Statistics Canada plans to continue its analytical work in the area of low-income CPI's. Resources permitting, it is hoped that such work will incorporate refinements that will lessen the limitations previously mentioned.

source et de la nature des changements de prix, un des deux indices peut se situer au dessus ou au dessous de l'autre au cours de certaines périodes. A long terme toutefois, on prévoit que les écarts entre les deux indices seront minimes comme expliqué dans "Analyse supplémentaire des écarts entre les indices".

L'interprétation des résultats doit tenir compte du fait que l'indice concernant les faibles revenus comporte certaines lacunes. A cause de ces lacunes, cet IPC analytique n'est pas une mesure aussi définitive des variations de prix à la consommation des familles et personnes seules à faible revenu que ne l'est l'IPC pour les variations de prix de l'ensemble des familles et des personnes seules. La principale lacune réside dans le fait que les prix servant à calculer l'indice portant sur les faibles revenus sont les mêmes que ceux utilisés pour l'IPC officiel. Or, ces prix ne sont pas forcément représentatifs de ceux effectivement payés par les familles et les personnes seules à faible revenu. Par exemple, les prix d'articles subventionnés pour les éléments du budget des faibles revenus tels que le loyer et les produits pharmaceutiques n'évoluent pas nécessairement comme les prix des mêmes articles recueillis sur le marché aux fins de l'IPC officiel. De plus, il est tout à fait possible que les personnes à bas revenu achètent certains biens et services dans des points de vente au détail différents de ceux où sont relevés les prix aux fins de l'IPC officiel; en conséquence, les variations de prix dans ces points de vente peuvent ne pas correspondre à celles de l'IPC officiel. De plus, les ménages à faible revenu peuvent acheter des produits différents en qualité et en quantité. Même si ces lacunes n'infirmement pas, à notre avis, les résultats de l'indice expérimental, toujours est-il que nous ne pouvons pas en déterminer l'incidence précise.

Il convient de souligner que les résultats de la présente étude sont essentiellement de nature statistique. On n'a pas cherché à mesurer l'aptitude de divers groupes de population à contrer les effets de l'inflation.

La division des prix de Statistique Canada a l'intention de poursuivre les études analytiques dans ce domaine. Si les ressources le lui permettent, elle introduira des éléments qui permettront de réduire les lacunes mentionnées plus haut.

## Supplementary Analysis of Index Differences

### Conditions Necessary for Obtaining Different Aggregate Price Indexes When Elementary Commodity Group Indexes Are the Same

In order for the aggregate indexes to be different, three conditions must then exist:<sup>6</sup>

price indexes must be different from each other, at least among some elementary commodity groups (consequently, these also must be different than the All-items index);

the alternative expenditure weights applied to the two indexes have to be different, at least for some elementary commodity groups;

the above differences must be correlated with each other in some specific manner.

The first two conditions are satisfied, as evidenced from Tables 1 and 2. The price index changes between 1982 and 1983 for most major components differ from the change in the All-items index. As well, the expenditure weights for most major components differ between the official and low-income CPI's. These differences are even more pronounced at the elementary commodity group level.

The third condition requires further elaboration. Some of the elementary commodity groups, precisely because of a particular conjunction between the expenditure weight and price index, tend to "push" the low-income index above the official index. This can only happen under two sets of circumstances:

if the price increase for a given elementary commodity group is higher than the All-items increase and the expenditure weight of this group is greater in the low-income CPI than it is in the official CPI (this case may be ascribed a "++" designation);

if the price increase for a given group is lower than the All-items increase and the expenditure weight of this group is less in the low-income index than it is in the official CPI (this case may be ascribed a "--" designation).

<sup>6</sup> For further elaboration on this subject, see Section 8.1, *The Consumer Price Index Reference Paper, Concepts and Procedures - Updating Based on 1978 Expenditures*, Statistics Canada, Catalogue 62-553.

## Analyse supplémentaire des écarts entre les indices

### Conditions requises pour obtenir des indices de prix agrégés distincts lorsque les indices de groupes élémentaires de produits sont identiques

Pour que les indices agrégés qui en résultent soient différents, il faut remplir trois conditions<sup>6</sup>:

les indices de prix doivent être différents les uns des autres, au moins en ce qui concerne certains groupes élémentaires de produits (par conséquent ils doivent aussi être différents de l'indice d'ensemble);

les répartitions des dépenses appliquées aux deux indices doivent différer, au moins en ce qui concerne certains groupes élémentaires de produits;

les différences notées plus haut doivent être corrélées les unes avec les autres d'une manière précise.

Les deux premières conditions sont satisfaites comme on peut le voir aux tableaux 1 et 2. Les indices de prix de la plupart des composantes principales ont fluctué, de 1982 à 1983, à un rythme différent de celui de l'indice d'ensemble. De plus, les schémas des dépenses pour la plupart des principales composantes varient entre l'IPC et l'IPC à faible revenu. Ces différences sont encore plus profondes au niveau des groupes élémentaires de produits.

Il convient d'explicitier davantage la troisième condition. Un certain nombre de groupes élémentaires de produits, précisément à cause d'une relation particulière entre leur pondération et l'indice de prix, ont tendance à "pousser" l'indice concerné au-dessus de l'indice officiel. Le phénomène ne peut se produire que dans les deux ensembles de circonstances suivantes:

si la hausse des prix d'un groupe élémentaire de produits donné dépasse celle de l'indice d'ensemble et la pondération dans l'indice des faibles revenus est supérieure à celle qu'il a dans l'IPC officiel (cette condition peut être cotée "++");

si la hausse des prix d'un groupe donné est inférieure à celle de l'indice d'ensemble et la pondération du groupe dans l'indice concernant les ménages à faible revenu est moins élevée que celle qu'il a dans l'IPC officiel (cette condition peut être cotée "--").

<sup>6</sup> Pour de plus amples détails, voir la section 8.1 du Document de référence de l'indice des prix à la consommation, Révision fondée sur les dépenses de 1978, Concepts et procédures, Statistique Canada n° 62-553 au Catalogue.

Other elementary commodity groups, on the other hand, tend to "pull" the low-income index below the official CPI. This can only happen under two sets of circumstances:

the prices increase for a given group is higher than that of the All-items CPI and the expenditure weight of this group is smaller than the low-income index than it is in the official CPI (this case may be ascribed a "+" designation);

the price increase for a given group is lower than the All-items increase and the expenditure weight of that group is larger in the low-income CPI than it is in the official index (this case may be ascribed a "-") designation).

At any level of aggregation, the differences in the rates of change between the low-income and official index must also be taken into account in order to identify the direction and degree of "influence" that a level of aggregation may exert. For instance, the major component "Tobacco and Alcohol" registered an increase between 1981 and 1982 which was greater than that of the All-items index; in addition, its expenditure weight in the low-income CPI is lower than in the official CPI. As a result, one might ascribe it a "+" designation. This would appear to suggest that this major component tended to "pull" the low-income CPI below the official CPI. In point of fact, the opposite was the case, because the component's increase was greater in the low-income CPI than it was in the official index, and this had an impact on the relationship between the All-items indexes.

It is possible to estimate, in a certain sense, the "influence" exerted by a given commodity on the difference between alternatively weighted CPI's, when it is known in which manner the expenditure weight and price movement are combined at this commodity level and also what the magnitudes of these differences are. A method for estimating this "influence" has been developed by the Prices Division, rendering it possible to rank elementary groups by the magnitude of the "influence" they exert.

In summary, it can be observed that the divergence existing between any two indexes is the result of differing "influences". The fact that the low-income CPI increased more than the official CPI between 1982 and 1983 signifies that those elementary commodity groups having a "pulling-up" effect on the low-income CPI were more predominant.

En revanche, d'autres groupes élémentaires de produits tendent à "tirer" l'indice concernant les faibles revenus au dessous de l'IPC officiel. Le phénomène ne peut se produire que dans les deux ensembles de circonstances suivantes:

si la hausse des prix d'un groupe donné dépasse celle de l'indice d'ensemble et la pondération du groupe dans l'indice des ménages à faible revenu est inférieure à celle qu'il a dans l'IPC officiel (cette condition peut être cotée "+");

si la hausse des prix d'un groupe donné est moins forte que celle de l'indice d'ensemble et la pondération du groupe dans l'indice concernant les ménages à faible revenu est supérieure à celle qu'il a dans l'IPC officiel (cette condition peut être cotée "-").

Quel que soit le niveau d'agrégation, les différences dans le taux de variation de l'indice des faibles revenus et de l'indice officiel doivent aussi être prises en considération pour mesurer la direction et le degré "d'influence" exercé par le niveau d'agrégation en cause. Par exemple, la composante principale "tabacs et boissons alcoolisées" a enregistré entre 1981 et 1982 une augmentation supérieure à celle de l'indice d'ensemble; de plus, sa part des dépenses est moindre dans l'IPC des faibles revenus que dans l'IPC officiel. On peut donc attribuer la cote "+" à cette composante, ce qui semble signifier que cette dernière aurait tendance à "tirer" l'indice concernant les faibles revenus au-dessous de l'IPC officiel. En réalité, le contraire s'est produit puisque la composante a progressé plus rapidement dans l'IPC des faibles revenus que dans l'indice officiel, ce qui a influé sur la relation entre les deux indices d'ensemble.

Il est possible d'estimer, dans une certaine mesure, l'"influence" qu'exerce un produit donné sur la différence entre deux IPC de pondération différente, à condition de connaître la manière dont les différences dans le mouvement de prix et dans la part des dépenses sont regroupées au niveau du produit et l'ampleur des différences. La Division des prix a mis au point une méthode pour estimer cette "influence" et permettre le classement des groupes élémentaires selon l'importance de l'"influence" qu'ils exercent.

En résumé, on peut observer que l'écart entre les deux indices est attribuable à des "influences" divergentes. Le fait que l'IPC des ménages à faible revenu ait augmenté plus vite que l'IPC officiel entre 1982 et 1983 signifie que les groupes élémentaires de produits ayant une incidence "à tirer" sur l'IPC des faibles revenus ont été prédominants.

Although the increase in the low-income CPI since September 1978 was less than that registered in the official CPI, it is unlikely that this situation would prevail consistently over time. More specifically, it is difficult to conceive that a situation could prevail where:

price increases would consistently and substantially be greater for those goods and services which are relatively more important in the expenditure pattern of one population group, while;

price increases would consistently and substantially be less for those goods and services which are relatively more important in the expenditure pattern of another population group.

This combination of phenomena is not likely to prevail for any considerable length of time. For this reason, a low-income index should not be expected to differ substantially from the index for the consumer population at large over an extended period of time.

Même si l'augmentation de l'IPC des faibles revenus depuis septembre 1978 a été moins forte que celle de l'IPC officiel, il est peu probable que cette situation persiste à long terme. Plus précisément, on peut difficilement imaginer une situation où:

la progression des prix serait régulièrement et considérablement supérieure dans le cas des biens et services qui tiennent une place relativement plus importante dans les habitudes des dépenses d'une partie de la population, alors que

cette progression serait régulièrement et considérablement inférieure dans le cas des biens et services qui tiennent une place relativement plus importante dans les habitudes des dépenses d'une autre partie de la population.

Comme de telles conditions ne pourraient vraisemblablement coexister pendant très longtemps, il ne faut pas s'attendre à ce que, pendant une longue période, l'indice concernant les ménages à faible revenu diffère sensiblement par rapport à celui qui vise l'ensemble des consommateurs.

<sup>1</sup> The 1974 classification definition ends with the March 1982 index and the 1978 classification definition begins with the April 1982 index; therefore, an annual average for 1982 could not be calculated. The historical series from September 1978 to March 1982 for the 1978 classification is available upon request.

<sup>1</sup> La définition de la classification de 1974 prend fin avec l'indice de mars 1982, tandis que la définition de la classification de 1978 commence avec l'indice d'avril 1982; donc, une moyenne annuelle ne peut être calculée. La série historique, de septembre 1978 à mars 1982 pour la classification de 1978 est disponible sur demande.

<sup>1</sup> The expenditure shares corresponding to the index changes between 1981 and 1982 and between 1982 and 1983 could not be calculated, because a new set of weights was introduced as of April 1982. This meant that 1981 and 1982 could not be used as the implicit time reference points for the changes that occurred between 1982 and 1981 and between 1983 and 1982. It was thus not possible to include the Table 4 that had been part of the Supplements included in the January-March 1981 and 1982 issues of the Consumer Prices and Price Indexes, (Catalogue 62-010).

<sup>1</sup> Les portions des dépenses qui correspondent aux changements de l'indice entre 1981 et 1982 et entre 1982 et 1983 n'ont pas pu être calculées à cause de l'introduction en avril 1982 d'un nouvel ensemble de pondérations. Ceci veut dire que 1981 et 1982 ne peuvent pas être utilisés comme termes de référence implicite pour les changements qui sont survenus entre 1982 et 1981 et entre 1983 et 1982. Il n'a donc pas été possible de présenter le tableau 4 qui apparaissait dans les suppléments de Prix et indices des prix à la consommation (Cat.62-010) éditions de Janvier-mars 1981 et 1982.

## Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Consumer Prices Section,  
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9606) or to the Statistics Canada reference centre in:

St. John's (772-4073)	Sturgeon Falls (753-4888)
Halifax (426-5331)	Winnipeg (949-4020)
Montréal (283-5725)	Regina (359-5405)
Ottawa (990-8116)	Edmonton (420-3027)
Toronto (966-6586)	Vancouver (666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

## How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

## Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des prix à la consommation,  
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9606) ou au centre de consultation de Statistique Canada à:

St. John's (772-4073)	Sturgeon Falls (753-4888)
Halifax (426-5331)	Winnipeg (949-4020)
Montréal (283-5725)	Regina (359-5405)
Ottawa (990-8116)	Edmonton (420-3027)
Toronto (966-6586)	Vancouver (666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

## Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series shown in the publication. For further information on CANSIM call (613) 990-8200 or write Cansim Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

**Denis J. Desjardins**, Director,  
Prices Division

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret

## NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 990-8200 écrire à, Division Cansim, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

Cette publication a été rédigée sous la direction de:

**Denis J. Desjardins**, directeur,  
Division des prix

## Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements for each of the three months in the reference quarter, at both the urban Canada and the regional cities' level. This is presented in the form of descriptive analysis supported by tabular and graphic information.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part IV of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

## Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation de chaque mois du trimestre pour le Canada et les agglomérations urbaines. Ces informations sont présentées sous la forme d'analyses descriptives appuyées de tableaux et de graphiques.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagréé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie IV de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthodologie des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

PRIL 1984

Canada

The Consumer Price Index (CPI) for Canada stood at 121.5 (1981=100) in April, up 0.2% from the March level of 121.2. The marginal increase in the latest month was spread throughout most major components with the exception of Clothing, which recorded a slight decline. The Food index advanced by 0.3% between March and April, down from the advance of 0.8% registered in March. The All-items excluding Food index advanced 0.2%, virtually unchanged from the increase of 0.1% recorded between February and March.

The year-over-year increase in the CPI, as measured by comparing the index of April 1984 to that of April 1983, was 4.9%, up from the advance of 4.7% registered between March 1983 and March 1984. The slight acceleration in the latest year-over-year increase was principally attributable to the downward impact that gasoline price wars had on the April 1983 index, price wars which were not in effect to the same extent in April 1984.

The increase of 0.3% in the Food index was largely attributable to higher fresh fruit prices, especially for bananas and grapefruit, and to a lesser extent, to increased prices for selected beef cuts, cooked meat products, and for restaurant meals. Dampening the overall impact of these price increases was a decline in fresh vegetable prices, which on average decreased by 5.6%. Within fresh vegetables, substantially lower prices were registered for most salad-type vegetables, as supplies from the Southern United States are returning to more seasonal levels following the effects of the mid-winter frosts. However, prices for storable-types of fresh vegetables continued to increase due to reduced domestic stocks and higher prices for imports. The Food Purchased from Stores index advanced 0.3% between March and April and was up 7.3% over its level of April 1983. The Food Purchased from Restaurants index increased 0.2% in April and was up 4.4% over its April 1983 level. As a result, the aggregate Food index rose 6.5% over its level of April 1983, down from the increase of 7.3% registered between March 1983 and March 1984.

The factors responsible for the 0.2% increase in the All-items excluding Food index were diverse, spread throughout all of the components making up this index, with the exception of the Clothing component, which recorded a marginal decline, reflecting seasonal specials. Within the Housing component, higher electricity charges were reported in New Brunswick, Manitoba and British Columbia while shelter charges rose in most cities across the country with the exception of those in Alberta. Within

AVRIL 1984

Canada

L'indice des prix à la consommation (IPC) pour le Canada s'est établi à 121.5 (1981=100) en avril, en hausse de 0.2% par rapport au niveau de 121.2 enregistré en mars. La faible progression au cours du mois écoulé a été répartie entre les différentes composantes, à l'exception de l'habillement qui a légèrement reculé. L'indice des aliments a avancé de 0.3% entre mars et avril, en baisse par rapport à la hausse de 0.8% observée en mars. L'indice d'ensemble sans les aliments a grimpé de 0.2%, soit une augmentation très proche du taux de 0.1% enregistré entre février et mars.

La progression d'une année à l'autre de l'IPC, calculé en comparant l'indice d'avril 1984 à celui d'avril 1983, a été de 4.9%, en hausse par rapport au taux d'accroissement de 4.7% enregistré entre mars 1983 et mars 1984. La légère accélération de la variation d'une année à l'autre s'explique principalement par les guerres de prix de l'essence, qui avaient exercé un effet modérateur sur l'indice d'avril 1983 mais qui s'étaient apaisées en avril 1984.

L'augmentation de 0.3% de l'indice des aliments est imputable au renchérissement des fruits frais, surtout les bananes et les pamplemousses, et, dans une mesure moindre, à l'augmentation des prix de certaines coupes de boeuf, des produits de viande cuite et des repas pris au restaurant. L'impact global de ces hausses de prix a été atténué par le recul des prix des légumes frais, qui ont diminué en moyenne de 5.6%. S'agissant des légumes frais, les prix de la plupart des légumes à salades ont baissé sensiblement, les approvisionnements du sud des États-Unis, qui avaient diminué sous l'effet des gels du milieu de l'hiver, étant revenu à leurs niveaux saisonniers normaux. Toutefois, les prix des légumes frais d'entreposage ont continué d'augmenter en raison d'une diminution des stocks canadiens et du renchérissement des importations. L'indice des aliments achetés au magasin a avancé de 0.3% entre mars et avril et dépassait de 7.3% son niveau d'avril 1983. L'indice des aliments achetés au restaurant a progressé de 0.2% en avril pour s'établir à un niveau dépassant de 4.4% celui d'avril 1983. En conséquence, l'indice agrégatif des aliments a gagné 6.5% sur son niveau d'avril 1983, en baisse par rapport à l'accroissement de 7.3% enregistré entre mars 1983 et mars 1984.

Les facteurs qui expliquent l'augmentation de 0.2% de l'indice d'ensemble sans les aliments sont nombreux et se retrouvent dans toutes les composantes de cet indice, sauf l'habillement, cette dernière composante ayant légèrement reculé sous l'effet des soldes saisonniers. Dans le cas de la composante de l'habitation, on note un accroissement des tarifs de l'électricité au Nouveau-Brunswick, au Manitoba et en Colombie-Britannique, et une progression des frais de logement dans la plupart des villes du pays sauf celles de l'Alberta. Quant à la composante des

Transportation, higher prices for new cars, motorcycles and gasoline, coupled with increased vehicle insurance premiums and registration fees in Québec and higher local bus fares in Québec City, Ottawa and Vancouver offset air fare declines on certain international routes. Higher dental care charges were reported across the country, while hotel/motel rates increased in many centres due to the introduction of new seasonal rates. Prices for tobacco products rose (most notably in Nova Scotia and Saskatchewan as higher provincial taxes on such products came into effect), while beer prices rose in Newfoundland and Québec. Between April 1983 and April 1984, the All-items excluding Food index advanced by 4.5%, up from the 4.0% increase registered between March 1983 and March 1984. The acceleration in the year-over-year change primarily reflected the downward impact of the April 1983 gasoline price wars on the index for that month.

Viewed in terms of goods and services, the price level for goods advanced 0.2% while that for services increased 0.3%. As a result, between April 1983 and April 1984, the price level for goods advanced by 5.6% while that for services increased by 4.0%.

On a seasonally-adjusted basis, the All-items index increased by 0.5%, as the Food index registered no overall change, while the All-items excluding Food index rose by 0.6%. During the three month period, January 1984 to April 1984, the All-items index rose at a seasonally-adjusted compounded annual rate of 3.6%, down from the increase of 4.9% registered in the three months ending March 1984. The improvement in this measure in the latest period reflected the slowdown in the rate of price increase for food.

### City Highlights

Between March and April, consumer price changes in cities for which CPI's are produced closely mirrored that for Canada with the exception of Charlottetown/Summerside and Thunder Bay where increases of 0.5% and 0.7% respectively were registered. The larger than national average increase in these two cities was largely due to higher food prices, in particular for fresh milk. Electricity charges advanced in Saint John, Winnipeg and Vancouver but, due to the removal of the provincial sales tax on this service, declined in Regina and Saskatoon. Local transit fares rose in Québec, Ottawa and Vancouver, while taxi fares advanced in Halifax. Cigarette prices rose in Halifax, Regina and Saskatoon, reflecting in part tax changes announced in provincial budgets.

transports, les hausses de prix des voitures neuves, des motocyclettes et de l'essence, l'augmentation des primes d'assurance-automobile et des droits d'immatriculation au Québec et le relèvement des tarifs du transport en commun local à Québec, Ottawa et Vancouver ont contrebalancé les baisses des tarifs aériens sur certains parcours internationaux. Les coûts des soins dentaires ont augmenté partout au pays, et les tarifs des chambres d'hôtel/de motel ont haussé dans de nombreux centres urbains en raison de l'introduction des nouveaux tarifs saisonniers. Les prix des produits du tabac ont été majorés (notamment en Nouvelle-Écosse et en Saskatchewan en raison de l'entrée en vigueur de taxes provinciales plus élevées sur ces produits), les prix de la bière ont par ailleurs haussé à Terre-Neuve et au Québec. Entre avril 1983 et avril 1984, l'indice d'ensemble sans les aliments a progressé de 4.5%, en hausse par rapport à l'augmentation de 4.0% observée entre mars 1983 et mars 1984. L'accélération du changement d'une année à l'autre reflète surtout les guerres de prix de l'essence qui avaient exercé un effet modérateur sur l'indice d'avril 1983.

Du point de vue des biens et des services, le prix ont augmenté de 0.2% pour les biens et de 0.3% pour les services. Le niveau des prix s'est donc élevé de 5.6% pour les biens et de 4.0% pour les services entre avril 1983 et avril 1984.

Après désaisonnalisation, l'indice d'ensemble a augmenté de 0.5%, l'indice des aliments étant demeuré globalement inchangé alors que l'indice d'ensemble sans les aliments a progressé de 0.6%. Au cours de la période de trois mois allant de janvier 1984 à avril 1984, l'indice d'ensemble a affiché un taux de progression annuel composé désaisonnalisé de 3.6%, en baisse par rapport au taux de 4.9% enregistré pour la période de trois mois terminée en mars 1984. L'amélioration de cette mesure au cours de la période écoulée reflète le ralentissement du taux d'augmentation des prix des aliments.

### Point saillants des indices des villes

Entre mars et avril, les prix à la consommation dans les villes pour lesquelles on produit un IPC ont affiché des taux de changement très proches de la moyenne nationale, sauf à Charlottetown/Summerside et à Thunder Bay où ils ont augmenté de 0.5% et de 0.7% respectivement. Si les prix ont augmenté plus vite que la moyenne nationale dans ces deux villes, c'est surtout en raison de la majoration des prix des aliments, en particulier du lait frais. Les tarifs de l'électricité ont haussé à Saint John, Winnipeg et Vancouver mais le retrait de la taxe de vente provinciale les a fait baisser à Regina et Saskatoon. Les tarifs du transport en commun local ont augmenté à Québec, Ottawa et à Vancouver alors que les tarifs du taxi ont haussé à Halifax. Les cigarettes coûtent plus cher à Halifax, Regina et à Saskatoon, en partie en raison des changements fiscaux annoncés dans les budgets provinciaux.

MAY 1984

Canada

The Consumer Price Index (CPI) for Canada reached a level of 121.7 in May, up 0.2% from its April level of 121.5. This marked the third consecutive month in which increases of considerably less than one-half of one percent have been registered. This latest moderate advance in the index was largely attributable to increases in the transportation and the Recreation, Reading and Education components and, to a lesser extent, to advances in the Housing and the Tobacco and Alcohol components. The impact of these increases was dampened by a 0.3% decline in the Food index. The All-items excluding Food index advanced 0.2% between April and May, a rise similar to that observed between March and April.

The year-over-year increase in the CPI, as measured by comparing the index for May 1984 to that for May 1983, was 4.8%, remaining in the same range of increases observed in April (4.9%) and March (4.7%).

The 0.3% decline in the Food index was largely attributable to lower prices for fresh vegetables, down 9.8% on average between April and May, and, to a lesser extent, to a decrease in beef prices, notably for ground beef and loin cuts. Prices for chicken also declined in the month. Partly offsetting the impact of these decreases were higher prices for dairy products, pork, turkey and fresh fruit. The index for Food Purchased from Stores decreased 0.4% between April and May, standing 4.6% higher than its year ago level, down considerably from the 7.3% registered in April. The Food Purchased from Restaurants index increased 0.2% and as up 4.1% over its May 1983 level. As a result, the aggregate Food index rose 4.5% over its level of May 1983, down from the 4.5% increase registered between April 1983 and April 1984.

The 0.2% advance in the All-items excluding Food index was attributable to a number of component index increases. Within the transportation component, air fares were higher on average and prices for certain imported automobiles also increased. Higher prices for seasonal recreation equipment, notably boats and travel trailers, and increased fees for recreational activities were largely responsible for the advance in the Recreation, Reading and Education component. In the Tobacco and Alcohol component, higher cigarette prices, reflecting the impact of increased manufacturers' selling prices as well as provincial tax changes in Saskatchewan, and increased prices for beer and liquor purchased in licensed premises were observed. Slightly higher shelter

MAY 1984

Canada

L'indice des prix à la consommation (IPC) pour le Canada s'est établi à 121.7 en mai, en hausse de 0.2% par rapport au niveau de 121.5 enregistré en avril. L'indice a donc affiché, pour un troisième mois d'affilée, une augmentation nettement inférieure à un demi de un pour cent. Cette faible progression est surtout imputable à des hausses pour la composante des transports et pour celle des loisirs, de la lecture et de la formation et, dans une mesure moindre, à des avances pour l'habitation et pour les tabacs et boissons alcoolisées. L'impact de ces hausses a été atténué par une diminution de 0.3% de l'indice des aliments. L'indice d'ensemble sans les aliments a avancé de 0.2% entre avril et mai, soit un taux de progression analogue à celui observé entre mars et avril.

La progression d'une année à l'autre de l'IPC, calculée en comparant l'indice de mai 1984 à celui de mai 1983, a été de 4.8%, soit une augmentation du même ordre que celles observées en avril (4.9%) et en mars (4.7%).

Le recul de 0.3% de l'indice des aliments est attribuable principalement aux prix des légumes frais, qui ont baissé de 9.8% en moyenne entre avril et mai, et dans une mesure moindre, aux prix du boeuf, notamment ceux du boeuf haché et des coupes de longes. Les prix du poulet ont également baissé au cours du mois. Ces diminutions ont été contrebalancées en partie par le renchérissement des produits laitiers, du porc, de la dinde et des fruits frais. L'indice des aliments achetés au magasin a reculé de 0.4% entre avril et mai pour s'établir à un niveau dépassant de 4.6% celui d'il y a un an mais tout de même très inférieur au taux de 7.3% enregistré en avril. L'indice des aliments achetés au restaurant a progressé de 0.2% pour dépasser de 4.1% son niveau de mai 1983. En conséquence, l'indice agrégatif des aliments a gagné 4.5% sur son niveau de mai 1983, en baisse par rapport à l'accroissement de 6.5% enregistré entre avril 1983 et avril 1984.

L'avance de 0.2% de l'indice d'ensemble sans les aliments est attribuable aux augmentations de prix d'un certain nombre de composantes. S'agissant de la composante des transports, les tarifs aériens ont augmenté en moyenne et les prix de certaines voitures importées ont également été majorées. Le renchérissement du matériel récréatif saisonnier, notamment des bateaux et des roulottes, et l'augmentation des dépenses de loisirs expliquent dans une large mesure la montée de la composante des loisirs, de la lecture et de la formation. Quant à la composante des tabacs et des boissons alcoolisées, elle a progressé sous l'effet de la majoration des prix des cigarettes (en raison de l'accroissement des prix de vente des fabricants et des changements touchant la taxe provinciale en Saskatchewan) et de l'augmentation des prix de la

charges were responsible for the marginal increase in the Housing component. Between May 1983 and May 1984, the All-items excluding Food index increased by 4.9%, up from the 4.5% rise registered between April 1983 and April 1984. The acceleration in the year-over-year change principally reflected the downward impact that lower gasoline prices had on the level of the May 1983 index.

Viewed in terms of goods and services, the price level for goods declined by 0.1% while that for services increased by 0.5%. As a result, between May 1983 and May 1984, the price level for goods advanced by 5.3% while that for services rose by 4.1%.

On a seasonally-adjusted basis, the All-items index remained unchanged overall as the 0.9% decline in the Food index offset the 0.1% increase in the All-items excluding Food index. During the three-month period, February 1984 to May 1984, the All-items index rose at a seasonally adjusted compounded annual rate of 1.6%, down from the 3.6% rate observed in the three-month period ending April 1984. The improvement in this measure in the latest period was a reflection of both this month's decline in food prices and the deceleration observed in the rate of change in the All-items excluding Food index.

### City Highlights

Between April and May, consumer price changes in cities for which CPI's are produced ranged from a decline of 0.1% in Thunder Bay, Edmonton and Calgary to an increase of 0.5% in Québec. The monthly changes in most of the other cities closely paralleled those of the national aggregate index. The lower than national average change recorded in Thunder Bay and Edmonton was due to a large extent to lower gasoline prices, while the larger than national average increase reported in Québec was due mainly to higher gasoline prices reflecting a return to regular prices following "price war" levels reported in April. In Calgary, lower prices for furniture and shelter were mainly responsible for the overall decline. Variation in food price changes, ranging from a decline of 0.8% in Ottawa to an advance of 1.0% in Winnipeg and Regina, was also responsible for the differing overall rates of price change among cities.

Between May 1983 and May 1984, consumer price increases ranged from 1.5% in Calgary to 7.1% in Thunder Bay.

bière et des spiritueux achetés dans des débits. Des frais de logement légèrement en hausse expliquent la modeste augmentation de la composante de l'habitation. Entre mai 1983 et mai 1984, l'indice d'ensemble sans les aliments a progressé de 4.9%, en hausse par rapport à l'augmentation de 4.5% observée entre avril 1983 et avril 1984. L'accélération du changement d'une année à l'autre reflète surtout les guerres de prix de l'essence qui avaient exercé un effet modérateur sur l'indice de mai 1983.

Du point de vue des biens et des services, les prix ont diminué de 0.1% pour les biens et ont augmenté de 0.5% pour les services. Le niveau des prix s'est donc élevé de 5.3% pour les biens et de 4.1% pour les services entre mai 1983 et mai 1984.

Après désaisonnalisation, l'indice d'ensemble est resté inchangé dans l'ensemble, la baisse de 0.9% de l'indice des aliments ayant annulé l'augmentation de 0.1% de l'indice d'ensemble sans les aliments. Au cours de la période de trois mois allant de février 1984 à mai 1984, l'indice d'ensemble a affiché un taux de progression annuelle composé désaisonnalisé de 1.6%, en baisse par rapport au taux de 3.6% enregistré pour la période de trois mois précédente terminée en avril 1984. L'amélioration de cette mesure au cours de la période écoulée traduit la baisse des prix des aliments ce mois-ci ainsi que le ralentissement du taux d'augmentation de l'indice d'ensemble sans les aliments.

### Points saillants des indices des villes

Entre avril et mai, les changements des prix à la consommation dans les villes pour lesquelles on produit un IPC se sont échelonnés entre une baisse de 0.1% à Thunder Bay, Edmonton et Calgary et une augmentation de 0.5% à Québec. Les changements mensuels dans la plupart des autres villes sont très proches de ceux affichés par l'indice agrégatif national. Si les prix ont augmenté moins vite que la moyenne nationale à Thunder Bay et à Edmonton, c'est surtout en raison de la baisse des prix de l'essence, alors que l'augmentation plus rapide que la moyenne nationale à Québec s'explique par le renchérissement de l'essence en raison du retour à des prix réguliers après les guerres de prix d'avril. À Calgary, la baisse des prix des meubles et les diminutions des frais de logement expliquent la diminution globale. Les variations des prix des aliments, depuis une diminution de 0.8% à Ottawa jusqu'à une augmentation de 1.0% à Winnipeg et Regina, expliquent également la différence des taux de variation des prix dans l'ensemble d'une ville à l'autre.

Entre mai 1983 et mai 1984, les augmentations des prix à la consommation ont varié de 1.5% à Calgary à 7.1% à Thunder Bay.

JUNE 1984

Canada

The Consumer Price Index (CPI) for Canada (1981=100) attained a level of 122.2 in June, an increase of 0.4% over its May level of 121.7. This latest moderate advance in the index was virtually entirely attributable to increases in the Food and Transportation components which rose 1.3% and 1.1% respectively. Dampening the impact of these increases were marginal declines in the Housing and Recreation, Reading and Education indexes coupled with no overall change in the Clothing and Health and Personal Care components. The All-items excluding Food index rose 0.2% in June, the third consecutive month in which an increase of this moderate order has been registered.

The year-over-year increase in the CPI, as measured by comparing the index for June 1984 to that for June 1983, was 4.1%, down considerably from the 4.7% to 4.9% range observed in the previous three months. This marked deceleration in the year-over-year measure was principally attributable to the downward impact that the temporary end of gasoline price wars had on the June 1983 index, an impact not repeated to the same extent in June 1984.

The 1.3% increase in the Food index was largely attributable to higher prices for fresh fruit, notably bananas and citrus fruit. Also contributing to this advance were higher prices for pork, beef, poultry, dairy products and for certain vegetables, notably potatoes. The index for Food Purchased from Stores increased 1.6% between May and June, standing 6.1% above its June 1983 level, up from the 4.6% rate registered in the twelve-month period ending in May. The Food Purchased from Restaurants index increased 0.2% and was up 4.2% over its June 1983 level. As a result, the aggregate Food index rose 5.6% over its level of June 1983, down from the 4.5% increase recorded in May but lower than what had been registered in the three months previous to then.

The 0.2% advance in the All-items excluding Food index was largely attributable to the 1.1% rise in the Transportation component, two factors being mainly responsible for this increase. Firstly, air fares on many selected and transborder flights increased from their discounted levels and secondly, gasoline prices rose in some cities in southwestern Ontario. Contributing to a much lesser extent were higher prices for cigarettes resulting from budgetary tax measures in the provinces of Quebec and Manitoba. Dampening the impact of these

JUIN 1984

Canada

L'indice des prix à la consommation (IPC) pour le Canada (1981 = 100) s'est établi à 122.2 en juin, en hausse de 0.4% par rapport au niveau de 121.7 enregistré en mai. Cette modeste avance de l'indice est attribuable en quasi-totalité aux composantes des aliments et des transports, qui ont augmenté respectivement de 1.3% et de 1.1%. L'effet de ces hausses a été atténué par de faibles diminutions pour l'indice de l'habitation et pour celui des loisirs, de la lecture et de la formation, et par l'absence de changement pour les composantes de l'habillement et de la santé et des soins personnels. Pour un troisième mois d'affilée, l'indice d'ensemble sans les aliments a affiché une modeste progression, ayant augmenté de 0.2% en juin.

La progression d'une année à l'autre de l'IPC, calculée en comparant l'indice de juin 1984 à celui de juin 1983, a été de 4.1%, soit une nette diminution par rapport aux augmentations de l'ordre de 4.7% à 4.9% observées au cours des trois mois précédents. Ce ralentissement marqué du mouvement d'une année à l'autre est attribuable principalement à l'interruption momentanée des guerres de prix de l'essence qui avait fait monter l'indice de juin 1983, un phénomène qui ne s'est pas fait sentir autant en juin 1984.

L'augmentation de 1.3% de l'indice des aliments est attribuable dans une large mesure au renchérissement des fruits frais, notamment des bananes et des agrumes. De plus, la progression a été alimentée par les majorations des prix du porc, du boeuf, de la volaille, des produits laitiers et de certains légumes, notamment les pommes de terre. L'indice des aliments achetés au magasin a augmenté de 1.6% entre mai et juin pour s'établir à un niveau dépassant de 6.1% celui de juin 1983, soit une augmentation par rapport au taux de 4.6% enregistré pour la période de 12 mois précédente terminée en mai. L'indice des aliments achetés au restaurant a progressé de 0.2% pour dépasser de 4.2% son niveau de juin 1983. En conséquence, l'indice agrégatif des aliments a gagné 5.6% sur son niveau de juin 1983, en hausse par rapport à l'accroissement de 4.5% enregistré en mai mais en baisse par rapport à ce qui avait été enregistré dans chacun des trois mois précédents.

L'avance de 0.2% de l'indice d'ensemble sans les aliments est attribuable principalement à la montée de 1.1% de la composante des transports, augmentation elle-même imputable à deux facteurs principaux. Premièrement, les tarifs aériens pour beaucoup de destinations et de vols transfrontaliers ont augmenté après la fin des rabais et deuxièmement, les prix de l'essence ont été majorés dans certaines villes du sud-ouest de l'Ontario. Le renchérissement des cigarettes en raison des mesures fiscales prévues dans les budgets du Québec et du Manitoba a contribué à la montée des prix, mais dans une mesure nettement moindre.

increases were a decline in the Housing component, principally the result of promotional sales for furniture and appliances, and a decrease in the Recreation, Reading and Education index, largely attributable to sale prices for home entertainment equipment. Between June 1983 and June 1984, the index for All-items excluding Food increased by 3.7%, down markedly from the 4.9% recorded in May.

Viewed in terms of goods and services, the price level for goods increased 0.5% while that for services rose by 0.3%. As a result, between June 1983 and June 1984, the price level for goods advanced by 4.2% while that for services rose by 3.9%.

On a seasonally-adjusted basis, the All-items index decreased by 0.1% between May and June: the Food index increased 0.5% while the All-items excluding Food index rose 0.1% (see footnote). During the three-month period, March 1984 to June 1984, the All-items index rose at a seasonally adjusted compounded annual rate of 1.6%, unchanged from that observed for the three-month period ending May 1984.

### City Highlights

Between May and June, consumer price changes in cities for which CPI's are published ranged from a decline of 0.2% in both Québec and Thunder Bay to an increase of 0.8% in Winnipeg. The lower than national average increase in Québec was due primarily to a decline of 0.6% in food prices; in Thunder Bay, a sharp fall in gasoline prices (price-wars) was largely responsible for the overall decline. By contrast, the overall price increase in Winnipeg was substantially higher than the national average mainly because gasoline price wars ended.

### Footnote

This situation where the two component indexes increase while their aggregate decreases is an anomaly which may occasionally appear with the use of the direct seasonal adjustment approach. In this approach, as documented in Appendix 3 of Consumer Prices and Price Indexes (Cat. 62-010), each of the component and aggregate indexes is adjusted independently. Other approaches to seasonal adjustment do exist. One such approach is the indirect seasonal adjustment method where the weighted component indexes are aggregated to a total. Using this approach, the seasonally-adjusted percentage change for the All-items index in June would have been 0.2%, as derived from the increase of 0.5% for the Food index and the rise of 0.1% for the All-items excluding Food index. The associated seasonally-adjusted compounded annual rate of change would have been 2.4%.

L'effet de ces hausses a été atténué par le fléchissement de la composante de l'habitation en raison principalement des soldes de meubles et d'appareils ménagers, et par le recul de l'indice des loisirs, de la lecture et de la formation attribuable surtout aux soldes pour le matériel de détente au foyer. Entre juin 1983 et juin 1984, l'indice d'ensemble sans les aliments a augmenté de 3.7%, soit un ralentissement marqué par rapport au taux de 4.9% enregistré en mai.

Du point de vue des biens et des services, les prix ont augmenté de 0.5% pour les biens et de 0.3% pour les services. Le niveau des prix s'est donc élevé de 4.2% pour les biens et de 3.9% pour les services entre juin 1983 et juin 1984.

Après désaisonnalisation, l'indice d'ensemble a diminué de 0.1% entre mai et juin, l'indice des aliments ayant augmenté de 0.5% alors que l'indice d'ensemble sans les aliments grimpait de 0.1% (voir note). Au cours de la période de trois mois allant de mars 1984 à juin 1984, l'indice d'ensemble a affiché un taux de progression annuel composé désaisonnalisé de 1.6%, soit un taux identique à celui observé pour la période de trois mois terminée en mai 1984.

### Points saillants des indices des villes

Entre mai et juin, les changements des prix de la consommation dans les villes pour lesquelles on publie un IPC se sont échelonnés entre une baisse de 0.2% à Québec et à Thunder Bay et une hausse de 0.8% à Winnipeg. L'augmentation inférieure à la moyenne nationale à Québec est due principalement au recul de 0.6% des prix de produits alimentaires; à Thunder Bay, la chute des prix de l'essence (guerres de prix) est la grande responsable de la diminution globale. Par contre, l'augmentation globale des prix à Winnipeg dépasse sensiblement la moyenne nationale parce que les guerres de prix de l'essence sont terminées.

### Note

La diminution de l'indice agrégatif malgré l'augmentation des indices de ses deux composantes est une anomalie qui s'observe à l'occasion dans la méthode de la désaisonnalisation directe. Suivant cette méthode, expliquée en détail à l'appendice 3 du bulletin Prix à la consommation et indices de prix (n° 62-010 et catalogue), les indices de chaque composante et l'indice agrégatif sont désaisonnalisés séparément. Il existe d'autres méthodes de désaisonnalisation. L'une d'entre elles est la méthode de la désaisonnalisation indirecte qui consiste à agréger en un total les indices pondérés des composantes. Selon cette méthode, le changement désaisonnalisé en pourcentage de l'indice d'ensemble en juin aurait été de 0.2%, compte tenu de l'augmentation de 0.5% de l'indice des aliments et de la montée de 0.1% de l'indice d'ensemble sans les aliments. Le taux de progression annuel composé désaisonnalisé correspondant aurait été de 2.4%.

## April, May and June in Retrospect

Between March and June 1984 (second quarter) the All-items Consumer Price Index (CPI) for Canada rose by 0.8% from a level of 121.2 (1981=100) registered in March to that of 122.2 reached in June. The increase in this latest quarter represented a significant deceleration over the rise of 1.3% reported in the first quarter 1984. The latest rise was also considerably lower than the advance of 1.4% reported in the corresponding second quarter of 1983.

Over one-third of the 0.8% increase reported in the All-items index in the latest quarter was attributable to higher transportation charges, up 1.6% in the quarter. Another three-tenths of the increase was associated with higher Food prices which advanced by 1.3%. Higher housing charges, which increased by a moderate 0.2%, and increased Tobacco and Alcohol prices, up by 1.4%, together accounted for a further one-fifth of the overall increase in the All-items index in the second quarter.

The rise of 1.3% in the Food index for the second quarter was considerably lower than the 3.8% increase reported in the first quarter. The latest rise resulted from advances of 1.4% and 0.7% respectively in the prices of Food Purchased from Stores and Food Purchased from Restaurants. A considerable proportion of the latest increase was attributable to higher prices for fresh fruit while the impact of higher prices for pork, cooked meat, selected dairy products, coffee and tea was also very evident. At the same time, fresh vegetable prices fell on average as they adjusted to more normal levels following the abnormally high levels reached in the first quarter.

The All-items excluding Food index rose by 0.7% in the second quarter, matching the increase reported in the previous quarter. Approximately one-half of the increase in this index in the latest quarter originated from higher Transportation charges (up 1.6%) while significant proportions of the increase were also attributable to higher housing charges (up 0.2%), increased Tobacco and Alcohol prices (up 1.4%) and higher charges related to Recreation, Reading and Education (up 0.8%).

The Transportation index rose by 1.6% in the second quarter compared to an advance of 0.1% reported in the previous quarter. Higher air-fares resulting in part from a termination of "seat-sales" on selected routes accompanied by a rise in fares on other routes, were the dominant cause for the latest change. In addition, gasoline

## Avril, mai et juin en rétrospective

L'indice d'ensemble des prix à la consommation (IPC) pour le Canada a augmenté de 0.8% de mars à juin 1984 (deuxième trimestre), passant de 121.2 (1981=100) en mars à 122.2 en juin. La progression du trimestre écoulé représente un ralentissement notable par rapport à la montée de 1.3% enregistrée au premier trimestre de 1984. La dernière avance est également nettement inférieure à celle de 1.4% observée au deuxième trimestre de 1983.

Plus du tiers de l'accroissement de 0.8% de l'indice d'ensemble au cours du trimestre écoulé est attribuable à la montée des frais de transports, en hausse de 1.6%. Un autre trois dixièmes de l'augmentation découle du renchérissement des aliments, en hausse de 1.3%. Le faible relèvement de 0.2% des frais d'habitation et la majoration de 1.4% des prix des tabacs et boissons alcoolisées ont compté ensemble pour un autre cinquième de l'augmentation globale de l'indice d'ensemble au deuxième trimestre.

L'indice des aliments a progressé de 1.3% au deuxième trimestre, soit nettement moins qu'au premier trimestre alors qu'il avait augmenté de 3.8%. La dernière montée est le résultat de l'avance de 1.4% des prix des aliments achetés au magasin et de la progression de 0.7% de ceux des aliments achetés au restaurant. Ces hausses sont attribuables dans une large mesure au renchérissement des fruits frais et, dans une mesure un peu moindre, à la majoration des prix du porc, des viandes cuites, de certains produits laitiers, du café et du thé. Par ailleurs, les prix des légumes frais ont baissé en moyenne pour revenir à des niveaux plus normaux, après avoir atteint des sommets inhabituels au premier trimestre.

L'indice d'ensemble sans les aliments a grimpé de 0.7% au deuxième trimestre, soit un taux de progression identique à celui du trimestre précédent. La moitié environ de la progression de cet indice au cours du dernier trimestre découle de l'accroissement des frais de transports (plus 1.6%), alors que les hausses des frais d'habitation (plus 0.2%), des prix des tabacs et boissons alcoolisées (plus 1.4%) et des dépenses de loisirs, de lecture et de formation (plus 0.8%) y ont également contribué puissamment.

L'indice des transports a affiché une progression de 1.6% au deuxième trimestre, comparative à une avance de 0.1% au trimestre précédent. La hausse des tarifs aériens, en partie sous l'effet de la fin des "soldes de places" sur certains parcours et de l'accroissement des tarifs sur d'autres parcours, explique en grande partie le dernier mouvement de l'indice. En

prices also rose reflecting the ending of "price wars" in many cities. Over the course of the second quarter, higher prices for imported cars were also reported along with increased local bus fares, higher charges for rented and leased vehicles and advances in vehicle registration and driving permit fees.

The Tobacco and Alcohol index rose by 1.4% following a moderate 0.6% rise reported in the first quarter. Higher prices for tobacco products, resulting largely from provincial tax increases in Nova Scotia, Saskatchewan, Québec and Manitoba, contributed significantly to the latest increase. Part of the quarterly increase in tobacco prices was also associated with higher manufacturer's costs. The prices for most alcoholic beverages purchased in stores as well as in licensed premises also advanced over the second quarter.

The Housing index rose a marginal 0.2% in the second quarter compared to an increase of 0.9% reported in the first quarter. Higher shelter, electricity and child-care charges accounted for the upward movement in this index while price declines for household cleaning supplies, furniture and appliances moderated the overall impact of the increase to a considerable extent.

The impact of the remaining three major components on the All-items index was less notable. The Recreation, Reading and Education index, up 0.8%, was largely attributable to higher prices for selected outdoor recreational equipment, to advances in fees and dues for recreational activities and to higher charges for recreational shelter and motel accommodation. The Health and Personal Care index rose 1.3% due mainly to increased dental care charges and higher prices for selected personal care supplies. Clothing prices reported no overall change in the second quarter as the impact of higher prices for women's suits and dresses was completely offset by lower prices for women's jewellery and men's suits.

outre, les prix de l'essence ont augmenté en raison de la fin des "guerres de prix" dans beaucoup de villes. Au cours du deuxième trimestre, les prix des voitures importées ont également augmenté de même que les tarifs du transport en commun local, les frais de location à court et à long terme de véhicules et les frais d'immatriculation et de permis de conduire.

L'indice des tabacs et boissons alcoolisées a grimpé de 1.4% après avoir augmenté de 0.6% en fin de première trimestre. L'augmentation des prix des produits du tabac, en raison surtout du relèvement des taxes provinciales en Nouvelle-Écosse, en Saskatchewan, au Québec et au Manitoba, a puissamment contribué à la dernière avance. Une partie de la progression trimestrielle des prix des tabacs découle par ailleurs de l'augmentation des coûts des fabricants. Les prix de la plupart des boissons alcoolisées achetées au magasin et dans les débits ont également haussé au deuxième trimestre.

L'indice de l'habitation a affiché une légère augmentation de 0.2% au deuxième trimestre comparativement à une hausse de 0.9% au premier trimestre. La montée des frais de logement, des tarifs de l'électricité et des frais de garde d'enfants explique le mouvement à la hausse de cet indice, alors que les diminutions des prix des produits d'entretien ménager, des meubles et des appareils ménagers ont exercé un effet modérateur important.

L'effet des trois dernières composantes sur le mouvement de l'indice d'ensemble a été moins marqué. La hausse de 0.8% de l'indice des loisirs, de la lecture et de la formation est attribuable principalement à la montée des prix de certains articles récréatifs d'extérieur, des frais et cotisations pour les activités de loisir ainsi que des frais d'hébergement et des prix des chambres de motel. L'indice de la santé et des soins personnels a haussé de 1.3% en raison surtout de l'accroissement des coûts des soins dentaires et du renchérissement de certains produits de soins personnels. Les prix des vêtements sont demeurés inchangés dans l'ensemble au deuxième trimestre et l'effet de la majoration des prix des tailleurs et robes pour femmes a été complètement annulé par la baisse des prix des bijoux pour femmes et des complets pour hommes.

(1) Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.

(2) Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.

(3) Whitehorse n'est pas inclus dans les moyennes pondérées des villes.

(4) Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.

(5) Les prix du haut de ronde sont relevés à St.-John's, Toronto, London, Saskatoon, Vancouver et Victoria.

(6) Chicoutimi (450 g), Québec (900 g).

## Appendix 1

### THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e. price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for twenty-six cities are available at present in Part IV of this publication. Inter-spatial indexes covering approximately two-thirds of the CPI basket for a selected number of cities are also available in this section.

#### Coverage

Beginning with the March to April 1982 price change, the weights used in the Consumer Price Index are those pertaining to 1978 expenditure patterns. Data used for establishing these patterns were obtained through the 1978 Family Expenditure Surveys. The expenditures are those reported by all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1978 revealed 64 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 64 urban centres into 31 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

## Appendice 1

### L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour vingt-six villes, à la Partie IV de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

#### Champ d'observation

À compter d'avril 1982, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1978. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1978. Les dépenses sont celles qu'ont déclarées tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1978, 64 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 64 centres urbains en 31 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 15 of these centres which, together, accounted for approximately 70% of the total 1978 current consumption expenditures reported in the 64 centres. These 15 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 400 commodities are priced in each of these 15 cities while in the remaining 49 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

## Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

## Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 15 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1978 par les 64 centres. Les 15 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 400 produits dans chacune des 15 villes; ce nombre est plus faible dans les 49 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

## Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

## Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1974 family expenditure patterns were used to compile the CPI from October 1978 to March 1982. In April 1982 the 1974 weights were replaced by those derived from the expenditure patterns of 1978. With the introduction of the 1974 weights, Statistics Canada adopted a policy to update weights on a regular four-year cycle.

La composition des dépenses des familles de 1974 a servi au calcul de l'IPC à partir d'octobre 1978 jusqu'à mars 1982. En avril 1982, les pondérations de 1974 ont été remplacées par d'autres dérivées de la composition des dépenses de 1978. Depuis l'introduction des pondérations de 1974, Statistique Canada a comme politique de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE 1. Comparison of 1974 and 1978 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF 1. Comparaison des pondérations des dépenses de 1974 et de 1978 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components Composantes principales	Weights 1974 Pondérations	Weights 1978 Pondérations
All-items - Ensemble	100.00 <sup>1</sup>	100.00 <sup>1</sup>
Food - Aliments	21.49	21.11
Housing - Habitation	34.06	35.37
Clothing - Habillement	10.12	9.55
Transportation - Transports	15.84	16.26
Health and personal care - Santé et soins personnels	3.96	3.71
Recreation, reading and education - Loisirs, lecture et formation	8.29	8.61
Tobacco and alcohol - Tabacs et boissons alcoolisées	6.24	5.39

Figures may not add up due to rounding.

<sup>1</sup> Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table 1 represent expenditures in 1974 (1974 quantities valued in 1974 prices) and in 1978 (1978 quantities valued in 1978 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981=100 time base. The methodology required to permit such a re-aggregation can be obtained on request by contacting the:

Consumer Prices Section  
Prices Division, Statistics Canada  
Ottawa, Ontario  
K1A 0T6  
(Telephone: (613) 990-9606)

Les pondérations du tableau explicatif 1 représentent les dépenses en 1974 (quantités et prix de 1974) et en 1978 (quantités et prix de 1978). Elles ne peuvent servir à reconstituer ni à composer des indices sur la base de 1981=100. La méthode à suivre pour une telle reconstitution peut être obtenue sur demande auprès de la:

Section des prix à la consommation  
Division des prix, Statistique Canada  
Ottawa (Ontario)  
K1A 0T6  
(Téléphone: (613) 990-9606)

The indexes based on 1978 weights were linked or connected in March 1982 to the appropriate indexes based on 1974 weights which had been in use since October 1978. This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Les indices fondés sur les pondérations de 1978 ont été enchaînés ou raccordés en mars 1982 aux indices correspondants fondés sur les pondérations de 1974, en usage depuis octobre 1978. Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

## Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981=100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981=100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every ten years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971=100 or 1981=100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights, which will continue to relate to 1978. Furthermore, the method employed in converting to the 1981=100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

## Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 3 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level and raising it to an annual rate (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", *Retail Prices and Living Costs - Service Bulletin* (Catalogue 62-005), Vol. 4, No. 4, April 1975.

## Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981=100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981=100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les dix ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971=100 et 1981=100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base, qui resteront celles de 1978. De plus, la méthode de conversion selon la base 1981=100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

## Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 3 consiste à prendre un taux de croissance composé sur le niveau désaisonné des trois derniers mois et à le porter à un taux annuel (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", *Prix de détail et coût de la vie - Bulletin de service* (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

## Reconstructed Indexes

With the release of the April 1982 Consumer Price Index, certain series were reconstructed historically to reflect more closely the Standard Commodity Classification system and the Family Expenditure categories of Statistics Canada. For further details see *The Consumer Price Index Reference Paper, Concepts and Procedures, Updating based on 1978 Expenditure*, Catalogue 62-553 (occasional).

## Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

## Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978 (the current expenditure reference period for the official CPI), 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres are not included in the calculation of the official CPI for Canada. These two centres will be included in the next Updating of the CPI at which time the 1982 expenditure patterns will be incorporated.

## Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation d'octobre 1978, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent plus fidèlement le système de la Classification type des produits et les catégories des Dépenses des Familles établis par Statistique Canada. Pour plus de renseignements, voir le "Document de référence de l'indice des prix à la consommation, concepts et procédés, mise à jour fondée sur les dépenses de 1978, n° 62-553 au catalogue (hors-série).

## Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

## Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978 (année de référence actuelle des dépenses pour l'IPC officiel), les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains ne sont pas compris dans le calcul de l'IPC officiel pour le Canada. Ces deux centres seront pris en compte lors de la prochaine mise à jour, lorsque la composition des dépenses de 1982 sera incorporée à l'IPC.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the fifteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two month lag.

#### **Additional Information and Related Publications**

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1978 Expenditures, Concepts and Procedures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in three volumes: **Urban Family Food Expenditure, 1978**, Catalogue 62-548; **Family Expenditure in Canada, 1978**, Catalogue 62-550; and **Family Expenditure in Canada, All Canada, Urban and Rural, 1978**, Catalogue 62-551.

The latest information on the Consumer Price Index for Canada and fifteen cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available on request. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-990-9606 or 613-990-9607).

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des quinze autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

#### **Reenseignements supplémentaires et publications connexes**

Le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1978, concepts et procédés" (hors-série), n<sup>o</sup> 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans trois volumes distincts: **Dépenses alimentaires des familles urbaines, 1978**, n<sup>o</sup> 62-548 au catalogue; **Dépenses des familles au Canada, 1978**, n<sup>o</sup> 62-550 au catalogue; et **Dépenses des familles au Canada, ensemble du Canada: régions urbaines et rurales, 1978**, n<sup>o</sup> 62-551 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de quinze villes sont publiés dans le bulletin mensuel "**L'indice des prix à la consommation**", n<sup>o</sup> 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont offerts sur demande. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6, (613-990-9606 ou 613-990-9607).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3  $(100 \text{ cents} \times \frac{100.0}{114.6} = 87.3 \text{ cents})$ . This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 4) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents  $(100 \text{ cents} \times \frac{100.0}{114.6} = 87.3 \text{ cents})$ . Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (Tableau 4) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then returns to its original level. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement in one direction over a long period. It reflects continuing rather than changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the subject.<sup>1</sup> Rather than reiterating those texts, an outline of the methodologies

Appendice 3

LA DÉSÉASONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, puis revient à son niveau initial. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable orienté dans une même direction sur une longue période. Elle reflète la continuité de l'économie plutôt que l'évolution des facteurs économiques.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question<sup>1</sup>. Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des

employed in the derivation of seasonally-adjusted consumer price indexes for Canada is provided below.

Prior to the latest updating of expenditure patterns, seasonal adjustment of the Consumer Price Index was carried out at the item level using the ARIMA (Auto-Regressive Integrated Moving Average) model of the X-11 Seasonal Adjustment programme.<sup>2</sup> The resulting seasonally-adjusted item series were then analyzed to assess the quality of the seasonal adjustment process. Those series not satisfying the criteria for seasonal adjustment, as established by Statistics Canada, were left unadjusted. The seasonally-adjusted and unadjusted item series were then combined to obtain seasonally-adjusted aggregates. The weighting pattern used in this aggregation process related only to the most current reference period for expenditure weights. Monthly percent changes were published for three aggregates only, All-items, Food, All-items excluding Food, for the period commencing with the official introduction of the current expenditure weights.

The above procedure resulted in the All-items, Food and All-items excluding Food percentage changes being influenced by only a relatively small number of seasonally-adjusted item indexes as both the irregular component and the incidence of moving seasonality seriously affected the item indexes. Furthermore, with regular updating of expenditure patterns now occurring once every four years, the time series using "unlinked" indexes is too short for valid seasonal adjustment. As a result, a comprehensive review of the methodology to be used in the seasonal adjustment of the CPI is currently being undertaken. Pending the outcome of this review and in order to provide interested users with seasonally-adjusted percentage changes, seasonal adjustment using published unadjusted data for the period 1971 to present is being carried out "directly" for the All-items, Food and All-items excluding Food indexes. Users should note that this procedure may cause the change in the All-items index to fall slightly outside the range of the two component indexes.

The seasonal factors obtained by this method for those three series are shown in the following table starting in January 1975.

méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avant la dernière mise à jour de la composition des dépenses, la désaisonnalisation de l'indice des prix à la consommation a été réalisée au niveau de l'article grâce au modèle ARIMA (auto-régressif à moyenne mobile intégrée) du programme de désaisonnalisation X-11.<sup>2</sup> Les séries d'articles ainsi obtenues ont ensuite été analysées pour évaluer la qualité du processus de désaisonnalisation. Les séries qui ne répondaient pas aux critères de désaisonnalisation, établis par Statistique Canada, n'ont pas été désaisonnalisées. Les séries désaisonnalisées et non désaisonnalisées ont ensuite été combinées pour obtenir des agrégats désaisonnalisés. Le schéma de pondération utilisé pour ce processus d'agrégation portait uniquement sur la période de référence la plus récente pour les pondérations des dépenses. Les variations mensuelles en pourcentage ont été publiées pour trois agrégats seulement, soit l'indice d'ensemble, l'indice des aliments et l'indice d'ensemble sans les aliments, pour la période débutant avec l'introduction officielle des pondérations des dépenses courantes.

En raison de la procédure susmentionnée, seulement un nombre relativement petit d'indices d'articles désaisonnalisés ont influé sur les variations en pourcentage de l'indice d'ensemble, de l'indice des aliments et de l'indice d'ensemble sans les aliments, les indices d'articles ayant été sensiblement affectés à la fois par les mouvements accidentels et par les fréquentes fluctuations saisonnières. De plus, puisque la mise à jour de la composition des dépenses doit désormais se faire à tous les quatre ans, la série chronologique utilisant des indices "non enchaînés" est trop brève pour permettre une désaisonnalisation valide. En conséquence, on est en train de revoir entièrement les méthodes qui seront utilisées pour la désaisonnalisation de l'IPC. En attendant le résultat de cette revue et afin de fournir aux utilisateurs intéressés des variations en pourcentage désaisonnalisées, la désaisonnalisation à l'aide des données non désaisonnalisées publiées pour la période de 1971 jusqu'à aujourd'hui est effectuée "directement" pour l'indice d'ensemble, l'indice des aliments et l'indice d'ensemble sans les aliments. Les utilisateurs doivent prendre note qu'en raison de cette procédure, la variation de l'indice d'ensemble peut tomber un peu à l'extérieur de l'étendue des deux indices composantes.

Les coefficients saisonniers obtenus par cette méthode pour ces trois séries figurent dans le tableau suivant à partir de janvier 1975.

) With the release of the December Consumer Price Index, the seasonal factors are revised for the previous five years.  
 ) À compter de l'émission de l'indice des prix à la consommation de décembre, les facteurs saisonniers sont révisés pour les cinq années précédentes.

## Appendix 4

### CITY AVERAGE RETAIL PRICES

#### 1. Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

Grocery stores are defined, for purposes of this Survey, as those with meat sales values at between 15% and 50% of total sales. Sales data are derived from Census of Merchandising information, updated, where necessary, by local advice from Statistics Canada Regional Offices.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

#### 2. Calculation Methodology

##### (a) City Prices

Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices

## Appendice 4

### PRIX DE DÉTAIL MOYENS PAR VILLE

#### 1. Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Aux fins de cette enquête, les épiceries étaient définies comme celles dont les ventes de viande représentaient entre 15% et 50% du total des ventes. Les données des ventes sont dérivées à partir des données du recensement des marchandises, mises à jour, lorsque nécessaire, sur recommandation des bureaux régionaux de Statistique Canada.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

#### 2. Méthode de calcul

##### a) Prix urbains

Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article

obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

#### **(b) Weighted City Averages**

A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

### **3. Item Specifications**

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

#### **b) Moyennes pondérées des villes**

Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

### **3. Spécification des articles**

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

**CITY AVERAGE RETAIL PRICES - ITEM SPECIFICATIONS**

**Detailed Specification**

**Beef**

**Sirloin steak.** Cut from section of hind quarter next to short loin, bone-in or bone-out, fresh, Canada A or B brand, 1 kg.

**Round steak.** Full cut of section of hind quarter next to rump, fresh, Canada A or B brand, boneless, 1 kg.

**Prime rib roast.** Standing, bone-in, short cut, any ribs within the first five of standard seven, fresh, Canada A or B brand, 1 kg.

**Blade roast (blade out).** Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

**Blade roast (blade in).** Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

**Stewing beef.** Boneless stewing beef, fresh, Canada A or B brand, 1 kg.

**Ground beef, regular.** Ground beef, with 24% to 30% fat content, fresh, 1 kg.

**Pork**

**Bacon.** Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line, 500 g.

**Pork, centre cut chops.** Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, 1 kg.

**Pork, butt roast.** Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boneless Butt**, 1 kg.

**Pork, butt roast.** Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boston Butt**, 1 kg.

**PRIX DE DÉTAIL MOYENS PAR VILLE - SPÉCIFICATIONS DES ARTICLES**

**Spécification détaillée**

**Boeuf**

**Bifteck de surlonge.** Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou désossé, frais, marque Canada A ou B, 1 kg.

**Bifteck dans la ronde.** Coupe entière d'une section du quartier de derrière voisine de la croupe, frais, marque Canada A ou B, désossé, 1 kg.

**Rôti de côtes de choix.** Nature, non désossé, coupe courte, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, 1 kg.

**Rôti de palette (désossé).** Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

**Rôti de palette (non désossé).** Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

**Boeuf à ragoût.** Désossé, boeuf à ragoût, frais, marque Canada A ou B, 1 kg.

**Boeuf haché régulier.** Boeuf haché, matières grasses: 24% à 30%, frais, 1 kg.

**Porc**

**Bacon.** Marques des fabricants largement distribuées (sauf les marques des magasins), bacon de flanc, fumé, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité, 500 g.

**Porc, côtelettes, partie du centre.** Coupe provenant du centre de la longe, fraîches, non désossées, parées, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, 1 kg.

**Porc, rôti de porc.** Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, rôti désossé, 1 kg.

**Porc, rôti de porc.** Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, "Boston Butt", 1 kg.

## Other Meat

**Wieners.** Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, 454 g.

## Poultry

**Chicken.** Eviscerated, fresh or frozen, broiler or fryer, whole, 1 to 2 kg, Grade A, price per kg.

## Fish

**Cod filets.** Generally available manufacturers' brands (store brands excluded), frozen, 454 g. package.

**Salmon.** Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 220 g. tin.

## Dairy Products

**Milk.** Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 litre.

**Milk 2%.** Fresh 2% M.F. partly skimmed milk, pasteurized and may contain vitamins "A" and "D". Disposable carton of 1 litre.

**Butter.** Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 454 g.

**Cheese.** Generally available manufacturers' brands (store brands excluded), process cheese food square slices, with skim milk powder and/or whey powder added, plain without seasoning or condiments, individually wrapped, 250 g.

**Powdered milk.** Generally available manufacturers' brands (store brands excluded), powdered skim milk, 1.5 kg. card-board package, may be pasteurized or vitaminized.

**Evaporated milk.** Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 ml. can.

**Eggs.** Large eggs, Grade A, in a carton of 1 dozen.

## Autre viande

**Saucisses de Francfort.** Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, 454 g.

## Volaille

**Poulet.** Vidé, frais ou congelé, à griller ou à frire, entier, de 1 à 2 kg, catégorie A, vendu au kg.

## Poisson

**Filets de morue.** Marques des fabricants largement distribuées (sauf les marques des magasins), congelés, paquet de 454 g.

**Saumon.** Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 220 g.

## Produits laitiers

**Lait.** Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 litre (en carton), non consigné.

**Lait 2%.** Lait frais, partiellement écrémé, 2% de matières grasses de lait, pasteurisé, pouvant être additionné de vitamines A ou D. Contenant de 1 litre (en carton), non consigné.

**Beurre.** Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 454 g.

**Fromage.** Marques des fabricants largement distribuées (sauf les marques des magasins), préparation de fromage fondu, tranches carrées avec lait écrémé en poudre et (ou) poudre de lactosérum, sans assaisonnement, ni condiment, enveloppées individuellement, 250 g.

**Lait en poudre.** Marques des fabricants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 1.5 kg, peut être pasteurisé ou vitaminé.

**Lait évaporé.** Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 ml.

**Oeufs.** Oeufs de grosse taille, catégorie A, en boîte de 12.

## Bakery and Cereal Products

**Flour, 2.5 kg.** Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types.

**Macaroni.** Generally available manufacturers' brands (store brands excluded) dry, tubular shape macaroni, 500 g package.

**Corn flakes.** Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package.

**Bread.** Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

**Bread.** Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

**Soda crackers.** Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 450 g.

## Fruit

**Bananas.** First grade, price per kg.

**Grapefruit.** United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per kg.

**Oranges.** California, medium size (138 or 113) price per kg.

**Orange juice.** Generally available manufacturers' brands (store brands excluded), unsweetened or 5% sugar added, 1.36 litre.

## Vegetables

**Cabbage.** Fresh, domestic or imported, green cabbage, good quality, price per kg of an average size head.

**Carrots.** Tops completely removed, good quality, in plastic or cellophane packages price per kg.

**Celery.** Celery stalks, green, fresh, may be trimmed or clipped, price per kg.

**Lettuce.** Fresh head, green, good quality, average size head, price per kg.

**Onions.** Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages price per kg.

## Céréales et produits de boulangerie

**Farine, 2.5 kg.** Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prêtamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine.

**Macaroni.** Marques des fabricants largement distribuées (sauf les marques des magasins), macaroni, forme tubulaire, paquet de 500 g.

**Flocons de maïs.** Marques des fabricants largement distribuées (sauf les marques des magasins), maïs en flocons, paquet de 675 g.

**Pain.** Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

**Pain.** Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

**Biscuits soda.** Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 450 g.

## Fruits

**Bananes.** Première qualité, vendues au kg.

**Pamplemousses.** Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix au kg.

**Oranges.** De Californie, grosseur moyenne (138 ou 113) prix au kg.

**Jus d'orange.** Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré ou additionné de 5% de sucre, boîte de 1.36 litre.

## Légumes

**Choux.** Frais, variété canadienne ou importée, choux vert, bonne qualité, prix au kg d'un chou de grosseur moyenne.

**Carottes.** Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane, vendues au kg.

**Céleri.** Pieds de céleri, verts, frais, peuvent être taillés, prix au kg.

**Laitue.** Fraîche, verte, bonne qualité, taille moyenne, prix au kg.

**Oignons.** Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane, vendus au kg.

## Vegetables - Concluded

**Potatoes.** Table potatoes, white, Canada No. 1, 4.54 kg.

**Turnips.** May be waxed, good quality, price per kg.

**French fried potatoes.** Generally available manufacturers' brands (store brands excluded), frozen, straight or regular cut, grade A or fancy, 1 kg. poly bag.

**Beans.** Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 398 ml.

**Tomatoes, canned.** Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 796 ml.

**Tomato juice.** Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 1.36 litre.

## Sugar and Sweets

**Sugar.** White, granulated, cane or beet sugar, bag of 2 kg.

## Beverages

**Coffee, roasted.** Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 369 g. bag.

**Coffee, instant.** Generally available manufacturers' brands (store brands excluded), dried coffee, extract soluble, pure or may have added dextrin, dextrose or maltose, 283 g.

**Tea bags.** Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 60 two-cup paper bags (227 g.).

## Fats

**Shortening.** Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 454 g.

## Légumes - fin

**Pommes de terre.** Pommes de terre de table, à chair blanche, catégorie Canada n<sup>o</sup> 1, sac de 4.54 kg.

**Navets.** Peuvent être cirés, bonne qualité, prix au kg.

**Pommes de terre frites.** Marques des fabricants largement distribuées (sauf les marques des magasins), congelées, coupe ordinaire ou droite, catégorie A ou de fantaisie, sac de 1 kg. en matière plastique.

**Fèves au lard.** Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 398 ml.

**Tomates, en conserve.** Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 796 ml.

**Jus de tomates.** Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 1.36 litre.

## Sucre et produits sucrés

**Sucre.** Blanc, cristallisé, de canne ou de betterave, sac de 2 kg.

## Boissons

**Café torréfié.** Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sac de 369 g.

**Café instantané.** Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 283 g.

**Thé en sachets.** Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 60 sachets de papier pour deux tasses chacun (227 g.).

## Matières grasses

**Graisse végétale.** Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100%. Peut être partiellement hydrogénée, carton de 454 g.

## Miscellaneous Groceries

**Tomato ketchup.** Generally available manufacturers' brands (store brands excluded), made from juice of ripe tomatoes, sugar, vinegar and seasonings, 1 litre bottle.

**Soup.** Generally available manufacturers' brands (store brands excluded) of vegetable soup, 284 ml.

**Infants' food.** Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 128 ml.

**Peanut butter.** Generally available manufacturers' brands (store brands excluded), made from roasted peanuts; may be labelled smooth or creamy, 500 g.

**Starch powder.** Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 85 g.

**Soft drinks.** Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. On bottle of 750 ml.

## Appliances and Personal Care Items

**Synthetic detergent powder.** Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 6 litres.

**Facial Tissue.** Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 10.6 cm x 23.9 cm.

**Bedroom Tissue.** Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, one or two ply sheets. Units of 4, about 600 to 650 sheets per roll, approx. 10.6 cm x 12.7 cm, wrapped in poly.

**Toothpaste.** Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 100 ml.

**Bar soap.** Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in multiple units of three or four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

## Articles divers d'épicerie

**Ketchup aux tomates.** Marques des fabricants largement distribuées (sauf les marques des magasins), fait de jus de tomates mûres, de sucre, de vinaigre et d'assaisonnements, bouteille de 1 litre.

**Soupe.** Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte de 284 ml.

**Nourriture pour bébés.** Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 128 ml.

**Beurre d'arachides.** Marques des fabricants largement distribuées (sauf les marques des magasins), fait à partir d'arachides torréfiées; l'étiquette peut porter la mention "crèmeux", 500 g.

**Poudre à gelée.** Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 85 g.

**Boissons gazeuses.** Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 ml.

## Fournitures et articles de soins personnels

**Détergent synthétique en poudre.** Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 6 litres.

**Papier mouchoir.** Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double épaisseur, taille approximative de 20.6 cm x 23.9 cm.

**Papier hygiénique.** Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, simple ou double épaisseur. Paquets de 4, d'environ 600 à 650 feuilles par rouleau, 10.16 cm x 12.7 cm, enveloppés dans du polyéthylène.

**Pâte dentifrice.** Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 100 ml.

**Savon de toilette.** Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en groupe de trois ou quatre pains par paquet. Les savons de taille pour invité ou de bain, de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

## Supplies and Personal Care Items - Concluded

### Tobacco

**Cigarettes.** Generally available popular brands, king size, filter tip, carton of 200.

#### 4. Average Retail Prices for Gasoline

Tables 14 through 19 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the fifteen urban centres for which Consumer Price Indexes are produced and cover the time period January 1982 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

#### 5. Average Retail Prices for Fuel Oil

Table 20 presents average retail prices for fuel oil. The information is collected four times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 20 are confined to the fifteen urban centres for which Consumer Price Indexes are produced and for the time period January 1982 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

## Fournitures et articles de soins personnels - fin

### Tabacs

**Cigarettes.** Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

#### 4. Prix de détail moyens de l'essence

Les tableaux 14 à 19 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux quinze centres urbains pour lesquels on produit un I.P.C. pour la période allant de janvier 1982 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

#### 5. Prix de détail moyens du mazout

Le tableau 20 présente les prix de détail moyens du mazout. Cette information est relevée quatre fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 20 se limitent aux quinze centres urbains pour lesquels on produit un I.P.C. pour la période allant de janvier 1982 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

## Appendix 5

### CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 21 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.<sup>1</sup>

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

## Appendice 5

### COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 21 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville<sup>1</sup> pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

<sup>1</sup> See Table 13 and Appendix 4.

<sup>1</sup> Voir tableau 13 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

#### FOOTNOTES FOR TABLE 21

(2) The weights shown are rounded 1978 weights as contained in the report *The Consumer Price Index, Reference Paper, Updating Based on 1978 Expenditures, Concepts and Procedures, (Occasional), Catalogue 62-553*. They are provided for illustration only: the weights actually used are combined cities weights with adjustments for price change since 1978.

(3) Does not include water, fuel and electricity.

#### NOTES POUR LE TABLEAU 21

(2) Les poids indiqués sont les poids pour 1978 figurant dans *L'Indice des prix à la consommation, document de référence, mise à jour fondée sur les dépenses de 1978, concepts et procédés (hors-série), n° 62-553 au catalogue*. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinées ajustés en fonction des variations des prix observées depuis 1978.

(3) Ne comprend pas l'eau, le combustible et l'électricité.

## INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110, for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison, because the federal government compensates for excess costs of these

## COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post index should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens, la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays, des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée à moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme l

For the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22

indices de poste concernant un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada.

## Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Consumer Prices Section,  
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (telephone: 990-9606) or to the Statistics Canada reference centre in:

St. John's (772-4073)	Sturgeon Falls (753-4888)
Halifax (426-5331)	Winnipeg (949-4020)
Montréal (283-5725)	Regina (359-5405)
Ottawa (990-8116)	Edmonton (420-3027)
Toronto (966-6586)	Vancouver (666-3691)

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

Northwest Territories (area served by NorthwTel Inc.)	Zenith 2-2015

## How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

## Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographique sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des prix à la consommation,  
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9606) ou au centre de consultation de Statistique Canada à:

St. John's (772-4073)	Sturgeon Falls (753-4888)
Halifax (426-5331)	Winnipeg (949-4020)
Montréal (283-5725)	Regina (359-5405)
Ottawa (990-8116)	Edmonton (420-3027)
Toronto (966-6586)	Vancouver (666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres régionaux de consultation.

Terre-Neuve et Labrador	Zénith 0-7037
Nouvelle-Écosse, Nouveau-Brunswick et Île-du-Prince-Édouard	1-800-565-7192

## Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series shown in the publication. For further information on CANSIM call (613) 990-8200 or write Cansim Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

**Denis J. Desjardins**, Director,  
Prices Division

**J. Arthur Ridgeway**, Chief,  
Consumer Prices Section

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret

## NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 990-8200 ou écrire à, Division Cansim, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

Cette publication a été rédigée sous la direction de:

**Denis J. Desjardins**, directeur,  
Division des prix

**J. Arthur Ridgeway**, chef  
Section des prix à la consommation

## Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, *The Consumer Price Index*, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements for each of the three months in the reference quarter, at both the urban Canada and the regional cities' level. This is presented in the form of descriptive analysis supported by tabular and graphic information.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part IV of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

## Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, *L'indice des prix à la consommation*, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation de chaque mois du trimestre pour le Canada et les agglomérations urbaines. Ces informations sont présentées sous la forme d'analyses descriptives appuyées de tableaux et de graphiques.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagregé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie IV de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthodologie des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

JULY 1984

## Canada

The Consumer Price Index (CPI) for Canada (1981=100) rose to a level of 122.9 in July, an increase of 0.6% over its June level of 122.2. This latest advance in the index was largely attributable to increases in the Transportation and Food components which rose 1.0% and 0.9% respectively. Contributing to a lesser extent to this latest increase were advances of 1.3% in the Recreation, reading and education index and 0.2% in the Housing component. Changes in the other three components only had a marginal impact on the All-items index. The All-items excluding Food index advanced by 0.5% in July.

The year-over-year increase in the CPI, as measured by comparing the index level for July 1984 to that of July 1983, was 4.2%, up marginally from the 4.1% observed in June.

The 0.9% increase in the Food index, following a rise of 1.3% in the previous month, was largely the result of higher prices for fresh vegetables (notably potatoes), fresh fruit, pork products and chicken. Dampening the impact of these increases was a price decline for beef products, ground beef in particular. The index for Food Purchased from Stores increased 1.1% in July, following a rise of 1.6% in June. This index now stands 6.6% above its July 1983 level, up from the 6.1% rate registered in June. The Food Purchased from Restaurants index increased 0.4% and was up 3.9% over its July 1983 level. As a result, the aggregate Food index rose 5.9% over its level of July 1983, up from the 5.6% registered in June.

The 0.5% advance observed in the All-items excluding Food index was largely attributable to the 1.0% rise in the Transportation component. Higher gasoline prices, reflecting both the end of price wars in certain cities and a general increase in prices, combined with seasonal fare increases for transatlantic flights, were principally responsible for the rise in the index. Contributing to a much lesser extent was an advance in the Housing component, resulting from moderate increases for shelter and household operation charges, as well as seasonally higher rates for hotel/motel accommodation. Dampening the impact of these increases was a decline in the Clothing component. Between July 1983 and July 1984, the index for All-items excluding Food has increased by 3.8%, largely unchanged from the 3.7% registered in June.

JUILLET 1984

## Canada

L'indice des prix à la consommation (IPC) pour le Canada (1981=100) s'est établi à 122.9 en juillet, en hausse de 0.6% par rapport au niveau de 122.2 enregistré en juin. La dernière avance de l'indice est en grande partie attribuable aux composantes des transports et des aliments, qui ont augmenté respectivement de 1.0% et 0.9%. La composante des loisirs, de la lecture et de la formation, avec un gain de 1.3%, et la composante de l'habitation, en hausse de 0.2%, ont également contribué à la dernière augmentation mais dans une moindre mesure. Les changements observés pour les trois autres composantes n'ont guère influé sur le mouvement de l'indice d'ensemble. L'indice d'ensemble sans les aliments a avancé de 0.5% en juillet.

La progression d'une année à l'autre de l'IPC, calculée en comparant l'indice de juillet 1984 à celui de juillet 1983, a été de 4.2%, soit une légère augmentation par rapport à celle de 4.1% observée en juin.

La progression de 0.9% de l'indice des aliments, qui survient après un gain de 1.3% enregistré au mois précédent, résulte surtout du renchérissement des légumes frais, notamment des pommes de terre, et de la majoration des prix des fruits frais, des produits du porc et du poulet. Ces hausses ont été tempérées par la baisse des prix des produits du boeuf, notamment le boeuf haché. L'indice des aliments achetés au magasin a progressé de 1.1% en juillet, après avoir augmenté de 1.6% en juin. Cet indice dépasse maintenant de 6.6% son niveau de juillet 1983, ce qui représente une augmentation par rapport au taux de progression de 6.1% enregistré en juin. L'indice des aliments achetés au restaurant a progressé de 0.4% pour dépasser de 3.9% son niveau de juillet 1983. En conséquence, l'indice agrégatif des aliments a gagné 5.9% sur son niveau de juillet 1983, en hausse par rapport à l'accroissement de 5.6% enregistré en juin.

L'avance de 0.5% observée pour l'indice d'ensemble sans les aliments est attribuable principalement à la montée de 1.0% de la composante des transports. Les hausses des prix de l'essence, sous l'effet de la fin des guerres de prix dans certaines villes et d'un relèvement général des prix, conjuguées aux augmentations saisonnières des tarifs aériens sur les vols transatlantiques, ont été les grandes responsables de cette progression. La hausse de l'indice de la composante de l'habitation, en raison de la progression modérée des frais de logement et des dépenses de ménage, conjuguée à la hausse saisonnière des tarifs des chambres d'hôtels et de motels ont aussi contribué, mais dans une mesure beaucoup moindre. L'effet de ces hausses a été atténué par le fléchissement de la composante de l'habillement. Entre juillet 1983 et juillet 1984, l'indice d'ensemble sans les aliments a augmenté de 3.8%, pratiquement inchangé par rapport au taux de 3.7% enregistré en juin.

Viewed in terms of goods and services, the price level for goods increased 0.6% as did the index for services. As a result, between July 1983 and July 1984, the price level for goods advanced 4.4% while that for services rose by 4.0%.

On a seasonally adjusted basis, the All-items index increased by 0.7% between June and July comprising increases of 0.3% in the Food component and 0.6% in the All-items excluding Food index (see footnote). During the three-month period May 1984 to July 1984, the All-items index rose at a seasonally adjusted compounded annual rate of change of 2.4%, up from the 1.6% rate registered in both previous three-month periods ending in June and May 1984.

### City Highlights

Between June and July, consumer price changes in cities for which CPI's are published ranged from a decline of 0.4% in Saskatoon to a rise of 1.2% in Edmonton. The price decline in Saskatoon resulted largely from lower food prices (reflecting the impact of a supermarket price-war), while the increase in Edmonton was largely attributable to higher gasoline prices which reflected a return to pre-"price-war" levels. Much of the variation in city price movements resulted from varying rates of change associated with food and gasoline prices. Eleven of the fifteen cities recorded food price increases in excess of one percent while, except for Québec, all the other cities reported advances in gasoline prices.

### Footnote

This situation where the increase in the total index falls outside the range of the increases of its two component indexes is an anomaly which may occasionally appear with the use of the direct seasonal adjustment approach. In this approach, as documented in Appendix 3 of Consumer Prices and Price Indexes (Cat. 62-010), each of the component and aggregate indexes is adjusted independently; in other words, the seasonally-adjusted aggregate index is not the weighted average of its seasonally-adjusted component indexes. Other approaches to seasonal adjustment do exist. One such approach is the indirect seasonal adjustment method where the weighted component indexes are aggregated to a total. Using this approach, the seasonally-adjusted percentage change for the All-items index in July would have been 0.5%, as derived from the increase of 0.3% for the Food index and the rise of 0.6% for the All-items excluding Food index. The associated seasonally-adjusted compounded annual rate of change would have been 2.4%.

Du point de vue des biens et des services, les prix ont augmenté de 0.6% pour les biens comme les services. Le niveau des prix s'est donc élevé de 4.4% pour les biens et de 4.0% pour les services entre juillet 1983 et juillet 1984.

Après désaisonnalisation, l'indice d'ensemble a augmenté de 0.7% entre juin et juillet, l'indice des aliments ayant haussé de 0.3% alors que l'indice d'ensemble sans les aliments grimpait de 0.6% (voir note). Au cours de la période de trois mois allant de mai 1984 à juillet 1984, l'indice d'ensemble a affiché un taux de progression annuel composé désaisonnalisé de 2.4%, en hausse par rapport au taux de 1.6% enregistré au cours des deux périodes de trois mois précédentes terminées en juin et en mai 1984.

### Points saillants des indices des villes

Entre juin et juillet, les changements des prix à la consommation dans les villes pour lesquelles on publie un IPC se sont échelonnés entre une baisse de 0.4% à Saskatoon et une hausse de 1.2% à Edmonton. Le recul des prix à Saskatoon est imputable surtout à la baisse des prix des aliments (sous l'effet des guerres de prix dans les supermarchés), alors que l'avance à Edmonton découle principalement du renchérissement de l'essence dont les prix sont revenus à leurs niveaux d'avant les "guerres de prix". Les différents taux de variation des prix d'une ville à l'autre sont imputables principalement au mouvement inégal des prix des aliments et de l'essence. Onze villes sur quinze ont enregistré des hausses de plus de un pour cent dans les prix des aliments alors que toutes les villes, sauf Québec, signalaient un relèvement des prix de l'essence.

### Note

La situation selon laquelle l'augmentation de l'indice total se situe à l'extérieur de l'étendue de l'augmentation des indices de ses deux composantes est une anomalie qui s'observe à l'occasion dans la méthode de désaisonnalisation directe. Suivant cette méthode, expliquée en détail à l'appendice 3 de Prix à la consommation et indices de prix (n° 62-010 au catalogue), les indices de chaque composante et l'indice agrégatif sont désaisonnalisés séparément; autrement dit, l'indice agrégatif désaisonnalisé n'est pas la moyenne pondérée des indices désaisonnalisés de ses composantes. Il existe d'autres méthodes de désaisonnalisation. L'une d'entre elles est la méthode de la désaisonnalisation indirecte qui consiste à agréger en un total les indices pondérés des composantes. Selon cette méthode, le changement désaisonnalisé en pourcentage de l'indice d'ensemble en juillet aurait été de 0.5%, compte tenu de l'augmentation de 0.3% de l'indice des aliments et de la montée de 0.6% de l'indice d'ensemble sans les aliments. Le taux de progression annuel composé désaisonnalisé correspondant aurait été de 2.4%.

AUGUST 1984

Canada

The Consumer Price Index (CPI) for Canada (1981=100) registered no overall change between July and August, remaining at the index level of 122.9 recorded in the month previous. Price decreases of 0.8% in the Food component and 0.5% in the Transportation index were offset by price increases in the other five components, notably a 0.2% rise in the Housing index. While the Food index declined by 0.8%, the All-items excluding Food index rose by a moderate 0.2%.

The year-over-year increase in the CPI, as measured by comparing the index level for August 1984 to that of August 1983, was 5.7%, down from the 4.2% increase registered in July and the lowest year-over-year rise since October 1971 when it stood at 3.6%. This marked deceleration in the year-over-year increase was attributable to the large decline in the Food index in August relative to the more moderate decrease in August 1983, particularly for fresh vegetables; in addition, in August 1983, the Transportation component registered an increase while a decrease was observed in August 1984.

The 0.8% decrease in the Food index was largely the result of seasonally lower prices for fresh vegetables, those for potatoes having had the most significant downward impact. Lower prices for chicken, bread, sugar and soft drinks for home consumption also contributed to the decline in the Food index. Partially offsetting the impact of these decreases were higher prices for pork, milk and restaurant meals. The index for Food Purchased from Stores increased by 1.1% in August, following increases of 1.1% and 1.6% in July and June respectively. This index now stands 5.7% higher than its August 1983 level, down from the 6.6% observed in July. The Food Purchased from Restaurants index increased 0.4% in August and was up 4.1% over its August 1983 level. As a result, the aggregate Food index rose 0.2% over its level of August 1983, down from the 0.9% registered in July.

The 0.2% increase in the Housing component, attributable principally to a 1.1% rise in the Rent index, and this mainly observable in Quebec urban centres, was the single most important contributing factor in the 0.2% increase in the All-items excluding Food index. Price increases for women's wear items, cigarettes in Ontario, beer and liquor served in licensed premises and certain recreational items also contributed

AOÛT 1984

Canada

L'indice des prix à la consommation (IPC) pour le Canada (1981=100) est demeuré globalement inchangé en août, s'établissant toujours à 122.9 comme en juillet. La baisse de 0.8% de la composante des aliments et le recul de 0.5% de l'indice des transports ont été contrebalancés par les progressions des cinq autres composantes, notamment l'indice de l'habitation qui a grimpé de 0.2%. L'indice des aliments a diminué de 0.8%, alors que l'indice d'ensemble sans les aliments a enregistré une hausse modérée de 0.2%.

La progression d'une année à l'autre de l'IPC, calculée en comparant l'indice d'août 1984 à celui d'août 1983, a été de 3.7%, en baisse par rapport au taux de 4.2% enregistré en juillet et la plus faible progression d'une année à l'autre depuis octobre 1971 alors qu'on avait observé un taux de 3.6%. Ce ralentissement marqué de l'augmentation d'une année à l'autre est imputable à l'indice des aliments, qui a fortement diminué en août, beaucoup plus qu'en août 1983, notamment dans le cas des prix des légumes frais. En outre, la composante des transports, qui avait augmenté en août 1983, a diminué en août 1984.

La diminution de 0.8% de l'indice des aliments résulte dans une large mesure des baisses de prix saisonnières pour les légumes frais, les prix des pommes de terre ayant exercé l'effet modérateur le plus important. Les baisses de prix pour le poulet, le pain, le sucre et les boissons gazeuses consommées à la maison ont également contribué au recul de l'indice des aliments. L'impact de ces diminutions a été atténué par le renchérissement du porc, du lait et des repas pris au restaurant. L'indice des aliments achetés au magasin a reculé de 1.1% en août, alors qu'il avait augmenté de 1.1% et de 1.6% en juillet et en juin respectivement. Cet indice dépasse maintenant de 5.7% son niveau d'août 1983, en baisse par rapport au taux de 6.6% observé en juillet. L'indice des aliments achetés au restaurant a augmenté de 0.4% en août pour dépasser de 4.1% le niveau atteint en août 1983. En conséquence, l'indice agrégatif des aliments a gagné 0.2% sur son niveau d'août 1983, en baisse par rapport à l'accroissement de 0.9% enregistré en juillet.

L'augmentation de 0.2% de la composante de l'habitation, attribuable principalement à la montée de 1.1% de l'indice du loyer que l'on a pu observer principalement dans les centres urbains du Québec, a été le facteur le plus important de l'augmentation de 0.2% de l'indice d'ensemble sans les aliments. Les majorations des vêtements pour femmes, des cigarettes en Ontario, de la bière et des spiritueux consommés dans les débits et de certains articles récréatifs ont également

to this advance. Partially offsetting the impact of these price increases were lower prices for gasoline resulting from "price wars" in many Ontario urban centres. Between August 1983 and August 1984, the index for All-items excluding Food increased by 3.3%, down considerably from the 3.8% observed in July.

Viewed in terms of goods and services, the price level for goods declined by 0.3% and that for services increased by 0.4% between July and August. As a result, between August 1983 and August 1984, the price level for goods advanced by 3.6% while that for services rose by 3.8%.

On a seasonally-adjusted basis, the All-items index increased by 0.2% between July and August, comprising a decrease of 0.1% in the Food component and a 0.2% rise in the All-items excluding Food index. During the three-month period May to August, the All-items index rose at a seasonally-adjusted compounded annual rate of change of 2.8%, the fourth consecutive month in which this rate has been below 3%.

### City Highlights

Between July and August, consumer price changes in cities for which CPI's are published ranged from a decline of 0.6% in Québec and Montréal to a rise of 0.8% in Thunder Bay. The overall price decline observed in Québec and Montréal was largely attributable to significant declines in the prices of Food purchased from Stores (the result of a supermarket "price war"). The substantially higher than average increase reported in Thunder Bay resulted largely from higher gasoline and food prices. Eleven of the fifteen cities reported monthly overall increases of 0.1% or less.

Over the 12-month period August 1983 to August 1984, the increases in city CPI's varied from 2.0% in Saskatoon to 4.3% in Thunder Bay.

contribué à l'avance. Les effets de ces hausses de prix ont été modérés par la baisse des prix de l'essence découlant des "guerres de prix" dans plusieurs centres urbains de l'Ontario. Entre août 1983 et août 1984, l'indice d'ensemble sans les aliments a augmenté de 3.3%, soit une diminution importante par rapport au taux de 3.8% observé en juillet.

Du point de vue des biens et des services, les prix ont diminué de 0.3% pour les biens et ont augmenté de 0.4% pour les services entre juillet et août. Le niveau des prix s'est donc élevé de 3.6% pour les biens et de 3.8% pour les services entre août 1983 et août 1984.

Après désaisonnalisation, l'indice d'ensemble a augmenté de 0.2% entre juillet et août, la composante des aliments ayant diminué de 0.1% alors que l'indice d'ensemble sans les aliments grimpait de 0.2%. Au cours de la période de trois mois allant de mai à août, l'indice d'ensemble a affiché un taux de progression annuel composé désaisonnalisé de 2.8%, soit le quatrième mois de suite qui affiche un taux inférieur à 3%.

### Points saillants des indices des villes

Entre juillet et août, les changements des prix à la consommation dans les villes pour lesquelles on publie un IPC se sont échelonnés entre une baisse de 0.6% à Québec et Montréal et une hausse de 0.8% à Thunder Bay. La baisse globale des prix observée à Québec et à Montréal est largement attribuable à la forte diminution des prix des aliments achetés au magasin (en raison d'une "guerre de prix" dans les supermarchés). L'augmentation très supérieure à la moyenne nationale à Thunder Bay s'explique dans une large mesure par la majoration des prix de l'essence et des aliments. Onze des quinze villes ont signalé des augmentations mensuelles globales de 0.1% ou moins.

Au cours de la période de douze mois allant d'août 1983 à août 1984, les augmentations dans les villes visées par un IPC ont été comprises entre 2.0% à Saskatoon et 4.3% à Thunder Bay.

SEPTEMBER 1984

## Canada

The Consumer Price Index (CPI) for Canada (1981=100) rose to a level of 123.0 in September, a modest increase of 0.1% over its August level of 122.9. This rise reflected the largely offsetting impact of a 0.7% decrease in the Food component combined with generally moderate increases in five of the other six components, most importantly a 0.3% rise in the Housing index. The Transportation index remained unchanged overall as increases in Private Transportation costs were offset by a decline in the Public transportation index. While the Food index decreased 0.7%, the All-items excluding Food index rose by 0.3%.

The year-to-year increase in the CPI, as measured by comparing the index level for September 1984 to that of September 1983, was 3.8%, virtually unchanged from the 3.7% increase in August.

The 0.7% decrease in the Food index was largely due to the continuing seasonal price reductions for most vegetables, with potato and tomato prices having the greatest downward impact. Lower prices for fresh fruit and for certain beef cuts also contributed to this decline. Price increases for chicken, dairy products and restaurant meals only partially offset the impact of these declines on the Food index. The Food Purchased from Stores index decreased a further 0.0% in September following a 1.1% decrease in August. This index now stands at a level 0.1% above its September 1983 level. The Food Purchased from Restaurants index increased 0.2% in September and was up 4.1% over its September 1983 level, the same increase as observed in August. As a result, the aggregate Food index stood 5.6% higher than its September 1983 level, up from the 5.2% recorded in August.

The 0.3% increase in the Housing component, largely the result of higher prices for household furnishings and equipment and increases in the rent and fuel oil indexes, was the most important contributing factor to the 0.3% rise in the All-items excluding Food index. Other significant contributing factors to the increase in this index were higher prices for women's wear and, to a lesser extent, for men's wear as well as higher post-secondary tuition fees in most provinces. Higher prices for gasoline, the result of the end of "price wars" in certain states, combined with the termination of specials for rented automobiles, resulted in

SEPTEMBRE 1984

## Canada

L'indice des prix à la consommation (IPC) pour le Canada (1981=100) s'est établi à 123.0 en septembre, affichant ainsi une modeste augmentation de 0.1% par rapport au niveau de 122.9 enregistré en août. Cette progression résulte principalement de la diminution de 0.7% de la composante des aliments qui a exercé un effet modérateur important sur les hausses généralement modestes, observées pour cinq des six autres composantes, notamment un gain de 0.3% de l'indice de l'habitation. L'indice des transports est demeuré globalement inchangé, l'augmentation des coûts du transport privé ayant été annulée par une diminution de l'indice des transports publics. L'indice des aliments a reculé de 0.7%, mais l'indice d'ensemble sans les aliments a grimpé de 0.3%.

La progression d'une année à l'autre de l'IPC, calculée en comparant l'indice de septembre 1984 à celui de septembre 1983, a été de 3.8%, soit pratiquement le même taux de progression qu'en août (3.7%).

Le fléchissement de 0.7% de l'indice des aliments est imputable surtout à de nouvelles baisses de prix saisonnières pour la plupart des légumes, les prix des pommes de terre et des tomates ayant exercé l'effet modérateur le plus important. La diminution des prix des fruits frais et de certaines coupes de boeuf a également contribué au recul. Les majorations de prix du poulet, des produits laitiers et des repas pris au restaurant n'ont que partiellement compensées l'impact de ces diminutions sur l'indice des aliments. L'indice des aliments achetés au magasin a encore fléchi de 1.0% en septembre, après avoir reculé de 1.1% en août. Cet indice dépasse maintenant de 6.1% son niveau de septembre 1983. L'indice des aliments achetés au restaurant a augmenté de 0.2% en septembre, pour dépasser de 4.1% son niveau de septembre 1983, soit un taux de progression identique à celui d'août. En conséquence, l'indice agrégatif des aliments a gagné 5.6% sur son niveau de septembre 1983, en hausse par rapport à l'accroissement de 5.2% enregistré en août.

La composante de l'habitation, qui a augmenté de 0.3% sous l'effet surtout du renchérissement des articles d'ameublement et accessoires et du relèvement des indices du loyer et du mazout, est la grande responsable de la montée de 0.3% de l'indice d'ensemble sans les aliments. Le renchérissement des vêtements pour femmes et, dans une mesure moindre, des vêtements pour hommes et l'augmentation des frais de scolarité au niveau postsecondaire dans la plupart des provinces ont également grandement contribué à la progression de cet indice. Les prix de l'essence ont augmenté en raison de la fin des "guerres de prix" dans certaines villes, et les frais de location d'automobiles ont haussé en raison de la fin des

an increase of 0.2% in the Private Transportation index, but this was offset by a decrease in the Public Transportation index due to lower air fares. Between September 1983 and September 1984, the index for All-items excluding Food increased by 3.3%, unchanged from the rise observed in August.

Viewed in terms of goods and services, the price level for goods remained unchanged overall in September and that for services increased 0.3%. Between September 1983 and September 1984, the price level for goods rose by 3.7% while that for services increased 4.0%.

On a seasonally-adjusted basis, the All-items index increased by 0.2% between August and September, comprising an increase of 0.4% in the Food component and rise of 0.1% in the All-items excluding Food index. During the three-month period June to September, the All-items index rose at a seasonally-adjusted compounded annual rate of change of 4.1%, up from the 2.8% observed for the three-month period ending in August.

### City Highlights

Between August and September, consumer price changes in cities for which CPI's are published ranged from declines of 0.2% in St. John's, Saint John and Thunder Bay to a rise of 0.7% in Québec. The overall price declines in St. John's and Saint John were primarily due to lower prices for food, notably fruit and vegetables, while the declines in Thunder Bay and Winnipeg were due to lower gasoline prices. The higher than average rise in Québec resulted largely from higher gasoline price increases while the higher than average rise in Saskatoon resulted from more pronounced food price increases. Twelve of the fifteen cities reported monthly overall increases of 0.2% or less.

solides, ce qui a entraîné une augmentation de 0.2% de l'indice du transport privé qui a cependant été contrebalancée par une diminution de l'indice du transport public en raison de la baisse des tarifs aériens. Entre septembre 1983 et septembre 1984, l'indice d'ensemble sans les aliments a avancé de 3.3%, soit un taux de progression identique à celui observé en août.

Du point de vue des biens et des services, le prix des biens sont demeurés inchangés dans l'ensemble en septembre alors que ceux des services gagnaient 0.3%. Le niveau des prix s'est donc élevé de 3.7% pour les biens et de 4.0% pour les services entre septembre 1983 et septembre 1984.

Après désaisonnalisation, l'indice d'ensemble a augmenté de 0.2% entre août et septembre sous l'effet d'une augmentation de 0.4% de la composante des aliments et d'un gain de 0.1% de l'indice d'ensemble sans les aliments. Au cours de la période de trois mois allant de juin à septembre, l'indice d'ensemble a affiché un taux de progression annuel composé désaisonnalisé de 4.1%, en hausse par rapport à l'augmentation de 2.8% observée pour la période de trois mois terminée en août.

### Points saillants des indices des villes

Entre août et septembre, les changements des prix à la consommation dans les villes pour lesquelles on publie un IPC se sont échelonnés entre des baisses de 0.2% à St. John's, Saint John et Thunder Bay et une augmentation de 0.7% à Québec. La baisse globale des prix à St. John's et à Saint John est imputable surtout aux diminutions des prix des aliments, notamment ceux de fruits et légumes, alors que les reculs à Thunder Bay et à Winnipeg sont imputables aux diminutions des prix de l'essence. L'augmentation supérieure à la moyenne à Québec est le résultat principalement de la majoration des prix de l'essence, alors que l'augmentation supérieure à la moyenne à Saskatoon découle des hausses plus marquées des prix des aliments. Douze des quinze villes ont signalé des augmentations mensuelles globales de 0.2% ou moins.

## July, August and September in Retrospect

The All-items Consumer Price Index (CPI) for Canada advanced by 0.7% between June and September 1984 (third quarter), from a level of 122.2 (1981=100) posted in June to 123.0 reached in September. The increase in this latest period was marginally lower than the advance of 0.8% reported in the second quarter 1984 and the 0.9% increase reported in the corresponding third quarter 1983.

The latest 0.7% rise in the All-items index in the third quarter was attributable, in the main, to an advance of 1.0% in the All-items excluding Food index, as the Food index fell by 0.5%. A considerable proportion of the latest rise in the All-items index originated from higher Housing charges (up 0.8%), followed by increases in Recreation, Reading and Education (up 2.4%). Less conspicuous but nonetheless noticeable contributors were also generated by advances in the Transportation index (up 0.6%), the Tobacco and Alcohol index (up 1.2%) and the Clothing index (up 0.8%).

The decline of 0.5% on average in Food prices in the latest period was a reversal following the rise of 1.3% reported in the second quarter. In the latest quarter, the prices of Food Purchased from Stores fell by 1.0%, while prices of Food Purchased from Restaurants advanced by 1.1%. Seasonally lower prices for fresh vegetables accounted for the bulk of the decline in prices for food bought from grocery stores. Some price declines were also registered for beef products, chicken and soft drinks. Higher prices for pork, other meat products, eggs, fresh fruit and fats and oils partially offset these declines in food prices.

The All-items excluding Food index advanced by 1.0% in the third quarter, up somewhat from the increase of 0.7% reported in the second quarter. Approximately two fifths of the latest increase in this index was associated with higher Housing charges (up 0.8%), while an additional one quarter of the advance resulted from increased charges associated with Recreation, Reading and Education (up 2.4%). Significant proportions of the increase in the non-food index were also attributable to higher Transportation costs (up 0.6%) and increased prices for Tobacco and Alcohol products (up 1.2%).

The Housing index rose by 0.8% in the third quarter, representing a noticeable acceleration over the 0.2% increase observed in the second quarter. In the latest quarter, rented accommodation charges rose noticeably (particularly in the province of Québec). Higher charges were also associated with owned accommodation, except in

## Juillet, août et septembre en rétrospective

L'indice d'ensemble des prix à la consommation (IPC) pour le Canada a progressé de 0.7% entre juin et septembre 1984 (troisième trimestre), passant de 122.2 (1981=100) en juin à 123.0 en septembre. L'augmentation au cours de cette dernière période est légèrement inférieure à l'avance de 0.8% signalée pour le deuxième trimestre de 1984, et à la progression de 0.9% observée au troisième trimestre de 1983.

La dernière montée de 0.7% de l'indice d'ensemble au troisième trimestre est attribuable surtout à l'avance de 1.0% de l'indice d'ensemble sans les aliments, l'indice des aliments ayant chuté de 0.5%. La récente hausse de l'indice d'ensemble est en grande partie imputable aux hausses des frais d'habitation (plus 0.8%) et aux augmentations des dépenses de loisirs, de lecture et de formation (plus 2.4%). Les hausses de l'indice des transports (plus 0.6%), de l'indice des tabacs et des boissons alcoolisées (plus 1.2%) et de l'indice de l'habillement (plus 0.8%) ont également contribué de façon moins marquée mais néanmoins appréciable.

La baisse de 0.5% des aliments en moyenne au cours de la dernière période représente un ralentissement considérable par rapport au gain de 1.3% observé au deuxième trimestre. Les prix des aliments achetés au magasin ont chuté de 1.0% au troisième trimestre, alors que ceux des aliments achetés au restaurant avançaient de 1.1%. Des baisses de prix saisonnières pour les légumes frais expliquent en grande partie le déclin des prix des aliments achetés dans les épiceries. D'autres baisses ont été observées pour le boeuf, le poulet et les boissons gazeuses. Les majorations des prix du porc, des autres viandes, des oeufs, des fruits frais et des huiles et corps gras ont partiellement annulé la baisse des prix des aliments.

L'indice d'ensemble sans les aliments a avancé de 1.0% au troisième trimestre, ce qui représente une légère augmentation par rapport au relèvement de 0.7% signalé au deuxième trimestre. Environ deux cinquièmes de la dernière hausse de cet indice sont liés à l'accroissement des frais d'habitation (plus 0.8%) alors qu'un autre quart résulte de la progression des dépenses de loisirs, de lecture et de formation (plus 2.4%). Les hausses des frais de transport (plus 0.6%) et des prix des tabacs et des boissons alcoolisées (plus 1.2%) ont également contribué notablement à l'augmentation de l'indice d'ensemble sans les aliments.

L'indice de l'habitation a gagné 0.8% au troisième trimestre, soit un taux de progression très supérieur à celui de 0.2% observé au deuxième trimestre. Au troisième trimestre, les frais de logement en location ont fortement augmenté (surtout au Québec). Le logement en propriété a également augmenté, sauf à Calgary et à Edmonton où des baisses ont été observées. Il y a eu une

Calgary and Edmonton where declines were observed. In September, fuel oil prices registered a noticeable rise, while charges related to piped gas, water and telephone services posted small gains. Prices for furniture and household appliances also registered modest price advances between June and September.

The Recreation, Reading and Education index rose by a sharp 2.4% in the third quarter, following an increase of 0.8% posted in the second quarter. Higher accommodation charges related to hotel and motel and other recreational shelter rose sharply, partly as a result of seasonal influences. Post-secondary tuition fees rose across all provinces (except Québec) in addition to a rise in reading charges. Less noticeable price advances were also reported for selected home entertainment equipment.

Transportation costs in the third quarter rose by an average of 0.6%, posting a sharp deceleration compared to the rise of 1.6% reported in the preceding quarter. Gasoline prices fluctuated on a month to month basis, mainly as a result of "price war" activities in different parts of the country. By September 1984, the gasoline index had risen 0.9% over that of June 1984, but was 0.4% lower than in September 1983. The modest rise in the Transportation index in the latest quarter was also attributable to advances in air fares, rented vehicle charges and automobile repair charges. Prices for new automobiles declined marginally as a result of promotional sales activity in that market.

Prices of Tobacco and Alcohol products rose by 1.2% in the third quarter compared to a rise of 1.4% in the second quarter. The latest advance was largely attributable to the indexed rise (effective September 1<sup>st</sup>) in the Federal Excise Taxes on such products. Price advances for beer purchased from stores in some provinces were also due to higher brewery charges, while cigarette prices advanced in Québec (July) and in Ontario (August) primarily due to a rise in provincial taxes associated with that commodity.

Among the remaining major components, the Clothing index rose by 0.8% in the third quarter, largely due to higher prices associated with selected women's wear items. In addition, the Health and Personal Care index increased 0.7% as higher dental care charges and for medical supplies and pharmaceuticals were reported.

augmentation importante des prix du mazout en septembre, et des hausses plus modestes des tarifs du gaz canalisé, de la taxe d'eau et des tarifs du téléphone. Les prix des meubles et des appareils ménagers ont également quelque peu augmenté entre juin et septembre.

L'indice des loisirs, de la lecture et de la formation a fait un bond de 2.4% au troisième trimestre, comparativement à une progression de 0.8% au deuxième trimestre. Les prix des chambres d'hôtel et de motel et d'autres frais d'hébergement ont fortement augmenté, ce qui est en partie imputable à la saison estivale. Les frais de scolarité au niveau postsecondaire ont grimpé dans toutes les provinces (sauf au Québec), et il y a eu en plus hausse des dépenses de lecture. Des majorations moins importantes des prix ont également été observées pour certains appareils de détente au foyer.

Les frais de transport au troisième trimestre ont grimpé de 0.6% en moyenne, un ralentissement sensible par rapport à la hausse de 1.6% observée au trimestre précédent. Les prix de l'essence ont fluctué d'un mois à l'autre, surtout en raison des "guerres de prix" dans diverses régions du pays. En septembre 1984, l'indice de l'essence avait gagné 0.9% par rapport à juin 1984 mais avait perdu 0.4% par rapport à septembre 1983. La modeste hausse de l'indice des transports au troisième trimestre s'explique également par le relèvement des tarifs aériens, des frais de location de véhicules et des frais de réparation d'automobiles. Les prix des voitures neuves ont quelque peu diminué en raison des efforts de promotion sur ce marché.

Les prix des tabacs et des boissons alcoolisées ont grimpé de 1.2% au troisième trimestre, alors qu'ils avaient gagné 1.4% au deuxième trimestre. La dernière avance est attribuable dans une large mesure à l'augmentation indexée (à compter du 1<sup>er</sup> septembre) des taxes d'accise fédérales sur ces produits. Le renchérissement de la bière achetée au magasin dans certaines provinces est également dû à l'accroissement des frais des brasseries, alors que la majoration des prix des cigarettes au Québec (en juillet) et en Ontario (en août) est due principalement au relèvement des taxes provinciales sur ce produit.

Parmi les autres composantes, l'indice de l'habillement a grimpé de 0.8% au troisième trimestre sous l'effet surtout de la montée des prix de certains vêtements pour femmes. En outre, l'indice de la santé et des soins personnels a gagné 0.7%, les tarifs pour les soins dentaires et les prix des articles médicaux et des produits pharmaceutiques ayant augmenté.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e. price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for twenty-six cities are available at present in Part IV of this publication. Inter-spatial indexes covering approximately two-thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the March to April 1982 price change, the weights used in the Consumer Price Index are those pertaining to 1978 expenditure patterns. Data used for establishing these patterns were obtained through the 1978 Family Expenditure Surveys. The expenditures are those reported by all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1978 revealed 64 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 64 urban centres into 31 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour vingt-six villes, à la Partie IV de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter d'avril 1982, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1978. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1978. Les dépenses sont celles qu'ont déclarées tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1978, 64 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 64 centres urbains en 31 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 15 of these centres which, together, accounted for approximately 70% of the total 1978 current consumption expenditures reported in the 64 centres. These 15 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 400 commodities are priced in each of these 15 cities while in the remaining 49 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

## Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

## Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 15 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1978 par les 64 centres. Les 15 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 400 produits dans chacune des 15 villes; ce nombre est plus faible dans les 49 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

## Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

## Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1974 family expenditure patterns were used to compile the CPI from October 1978 to March 1982. In April 1982 the 1974 weights were replaced by those derived from the expenditure patterns of 1978. With the introduction of the 1974 weights, Statistics Canada adopted a policy to update weights on a regular four-year cycle.

La composition des dépenses des familles de 1974 a servi au calcul de l'IPC à partir d'octobre 1978 jusqu'à mars 1982. En avril 1982, les pondérations de 1974 ont été remplacées par d'autres dérivées de la composition des dépenses de 1978. Depuis l'introduction des pondérations de 1974, Statistique Canada a comme politique de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE 1. Comparison of 1974 and 1978 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF 1. Comparaison des pondérations des dépenses de 1974 et de 1978 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components Composantes principales	Weights 1974 Pondérations	Weights 1978 Pondérations
All-items - Ensemble	100.00 <sup>1</sup>	100.00 <sup>1</sup>
Food - Aliments	21.49	21.11
Housing - Habitation	34.06	35.37
Clothing - Habillement	10.12	9.55
Transportation - Transports	15.84	16.26
Health and personal care - Santé et soins personnels	3.96	3.71
Recreation, reading and education - Loisirs, lecture et formation	8.29	8.61
Tobacco and alcohol - Tabacs et boissons alcoolisées	6.24	5.39

<sup>1</sup> Figures may not add up due to rounding.

<sup>1</sup> Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table 1 represent expenditures in 1974 (1974 quantities valued in 1974 prices) and in 1978 (1978 quantities valued in 1978 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981=100 time base. The methodology required to permit such a re-aggregation can be obtained on request by contacting the:

Consumer Prices Section  
Prices Division, Statistics Canada  
Ottawa, Ontario  
K1A 0T6  
(Telephone: (613) 990-9606)

Les pondérations du tableau explicatif 1 représentent les dépenses en 1974 (quantités et prix de 1974) et en 1978 (quantités et prix de 1978). Elles ne peuvent servir à reconstituer ni à composer des indices sur la base de 1981=100. La méthode à suivre pour une telle reconstitution peut être obtenue sur demande auprès de la:

Section des prix à la consommation  
Division des prix, Statistique Canada  
Ottawa (Ontario)  
K1A 0T6  
(Téléphone: (613) 990-9606)

The indexes based on 1978 weights were linked or connected in March 1982 to the appropriate indexes based on 1974 weights which had been in use since October 1978. This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Les indices fondés sur les pondérations de 1978 ont été enchaînés ou raccordés en mars 1982 aux indices correspondants fondés sur les pondérations de 1974, en usage depuis octobre 1978. Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

## Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981=100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981=100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every ten years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971=100 or 1981=100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights, which will continue to relate to 1978. Furthermore, the method employed in converting to the 1981=100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

## Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 3 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level and raising it to an annual rate (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", *Retail Prices and Living Costs* - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

## Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981=100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981=100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les dix ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971=100 et 1981=100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base, qui resteront celles de 1978. De plus, la méthode de conversion selon la base 1981=100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

## Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 3 consiste à prendre un taux de croissance composé sur le niveau désaisonné des trois derniers mois et à le porter à un taux annuel (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", *Prix de détail et coût de la vie* - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

## Reconstructed Indexes

With the release of the April 1982 Consumer Price Index, certain series were reconstructed historically to reflect more closely the Standard Commodity Classification system and the Family Expenditure categories of Statistics Canada. For further details see **The Consumer Price Index Reference Paper, Concepts and Procedures, Updating based on 1978 Expenditure**, Catalogue 62-553 (occasional).

## Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

## Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978 (the current expenditure reference period for the official CPI), 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres are not included in the calculation of the official CPI for Canada. These two centres will be included in the next Updating of the CPI at which time the 1982 expenditure patterns will be incorporated.

## Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation d'octobre 1978, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent plus fidèlement le système de la Classification type des produits et les catégories des Dépenses des Familles établis par Statistique Canada. Pour plus de renseignements, voir le **"Document de référence de l'indice des prix à la consommation, concepts et procédés, mise à jour fondée sur les dépenses de 1978, n° 62-553 au catalogue (hors-série)**.

## Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

## Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978 (année de référence actuelle des dépenses pour l'IPC officiel), les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains ne sont pas compris dans le calcul de l'IPC officiel pour le Canada. Ces deux centres seront pris en compte lors de la prochaine mise à jour, lorsque la composition des dépenses de 1982 sera incorporée à l'IPC.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the fifteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two month lag.

#### **Additional Information and Related Publications**

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1978 Expenditures, Concepts and Procedures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in three volumes: **Urban Family Food Expenditure, 1978**, Catalogue 62-548; **Family Expenditure in Canada, 1978**, Catalogue 62-550; and **Family Expenditure in Canada, All Canada, Urban and Rural, 1978**, Catalogue 62-551.

The latest information on the Consumer Price Index for Canada and fifteen cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available on request. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-990-9606 or 613-990-9607).

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des quinze autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

#### **Renseignements supplémentaires et publications connexes**

Le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1978, concepts et procédés" (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans trois volumes distincts: **Dépenses alimentaires des familles urbaines, 1978**, n° 62-548 au catalogue; **Dépenses des familles au Canada, 1978**, n° 62-550 au catalogue; et **Dépenses des familles au Canada, ensemble du Canada: régions urbaines et rurales, 1978**, n° 62-551 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de quinze villes sont publiés dans le bulletin mensuel "**L'indice des prix à la consommation**", n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont offerts sur demande. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6, (613-990-9606 ou 613-990-9607).

## Appendix 2

### THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 ( $100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$  cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 4) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

## Appendice 2

### LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents ( $100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$  cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (Tableau 4) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

## Appendix 3

### SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then returns to its original level. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement in one direction over a long period. It reflects continuing rather than changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the subject.<sup>1</sup> Rather than reiterating those texts, an outline of the methodologies

## Appendice 3

### LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, puis revient à son niveau initial. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable orienté dans une même direction sur une longue période. Elle reflète la continuité de l'économie plutôt que l'évolution des facteurs économiques.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question<sup>1</sup>. Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des

employed in the derivation of seasonally-adjusted consumer price indexes for Canada is provided below.

Prior to the latest updating of expenditure patterns, seasonal adjustment of the Consumer Price Index was carried out at the item level using the ARIMA (Auto-Regressive Integrated Moving Average) model of the X-11 Seasonal Adjustment programme.<sup>2</sup> The resulting seasonally-adjusted item series were then analyzed to assess the quality of the seasonal adjustment process. Those series not satisfying the criteria for seasonal adjustment, as established by Statistics Canada, were left unadjusted. The seasonally-adjusted and unadjusted item series were then combined to obtain seasonally-adjusted aggregates. The weighting pattern used in this aggregation process related only to the most current reference period for expenditure weights. Monthly percent changes were published for three aggregates only, All-items, Food, All-items excluding Food, for the period commencing with the official introduction of the current expenditure weights.

The above procedure resulted in the All-items, Food and All-items excluding Food percentage changes being influenced by only a relatively small number of seasonally-adjusted item indexes as both the irregular component and the incidence of moving seasonality seriously affected the item indexes. Furthermore, with regular updating of expenditure patterns now occurring once every four years, the time series using "unlinked" indexes is too short for valid seasonal adjustment. As a result, a comprehensive review of the methodology to be used in the seasonal adjustment of the CPI is currently being undertaken. Pending the outcome of this review and in order to provide interested users with seasonally-adjusted percentage changes, seasonal adjustment using published unadjusted data for the period 1971 to present is being carried out "directly" for the All-items, Food and All-items excluding Food indexes. Users should note that this procedure may cause the change in the All-items index to fall slightly outside the range of the two component indexes.

The seasonal factors obtained by this method for those three series are shown in the following table starting in January 1975.

méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avant la dernière mise à jour de la composition des dépenses, la désaisonnalisation de l'indice des prix à la consommation a été réalisée au niveau de l'article grâce au modèle ARIMA (auto-régressif à moyenne mobile intégrée) du programme de désaisonnalisation X-11.<sup>2</sup> Les séries d'articles ainsi obtenues ont ensuite été analysées pour évaluer la qualité du processus de désaisonnalisation. Les séries qui ne répondaient pas aux critères de désaisonnalisation, établis par Statistique Canada, n'ont pas été désaisonnalisées. Les séries désaisonnalisées et non désaisonnalisées ont ensuite été combinées pour obtenir des agrégats désaisonnalisés. Le schéma de pondération utilisé pour ce processus d'agrégation portait uniquement sur la période de référence la plus récente pour les pondérations des dépenses. Les variations mensuelles en pourcentage ont été publiées pour trois agrégats seulement, soit l'indice d'ensemble, l'indice des aliments et l'indice d'ensemble sans les aliments, pour la période débutant avec l'introduction officielle des pondérations des dépenses courantes.

En raison de la procédure susmentionnée, seulement un nombre relativement petit d'indices d'articles désaisonnalisés ont influé sur les variations en pourcentage de l'indice d'ensemble, de l'indice des aliments et de l'indice d'ensemble sans les aliments, les indices d'articles ayant été sensiblement affectés à la fois par les mouvements accidentels et par les fréquentes fluctuations saisonnières. De plus, puisque la mise à jour de la composition des dépenses doit désormais se faire à tous les quatre ans, la série chronologique utilisant des indices "non enchaînés" est trop brève pour permettre une désaisonnalisation valide. En conséquence, on est en train de revoir entièrement les méthodes qui seront utilisées pour la désaisonnalisation de l'IPC. En attendant le résultat de cette revue et afin de fournir aux utilisateurs intéressés des variations en pourcentage désaisonnalisées, la désaisonnalisation à l'aide des données non désaisonnalisées publiées pour la période de 1971 jusqu'à aujourd'hui est effectuée "directement" pour l'indice d'ensemble, l'indice des aliments et l'indice d'ensemble sans les aliments. Les utilisateurs doivent prendre note qu'en raison de cette procédure, la variation de l'indice d'ensemble peut tomber un peu à l'extérieur de l'étendue des deux indices composantes.

Les coefficients saisonniers obtenus par cette méthode pour ces trois séries figurent dans le tableau suivant à partir de janvier 1975.

<sup>1</sup> Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

1) With the release of the December Consumer Price Index, the seasonal factors are revised for the previous five years.

1) À compter de l'émission de l'indice des prix à la consommation de décembre, les facteurs saisonniers sont révisés pour les cinq années précédentes.

## Appendix 4

### CITY AVERAGE RETAIL PRICES

#### 1. Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

Grocery stores are defined, for purposes of this Survey, as those with meat sales values at between 15% and 50% of total sales. Sales data are derived from Census of Merchandising information, updated, where necessary, by local advice from Statistics Canada Regional Offices.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

#### 2. Calculation Methodology

##### (a) City Prices

Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices

## Appendice 4

### PRIX DE DÉTAIL MOYENS PAR VILLE

#### 1. Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Aux fins de cette enquête, les épiceries étaient définies comme celles dont les ventes de viande représentaient entre 15% et 50% du total des ventes. Les données des ventes sont dérivées à partir des données du recensement des marchandises, mises à jour, lorsque nécessaire, sur recommandation des bureaux régionaux de Statistique Canada.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

#### 2. Méthode de calcul

##### a) Prix urbains

Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article

obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

#### **(b) Weighted City Averages**

A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

### **3. Item Specifications**

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas de ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut; ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

#### **b) Moyennes pondérées des villes**

Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

### **3. Spécification des articles**

Les pages qui suivent, présentent une description de quelques 60 articles contenus dans l'enquête des prix moyens.

**CITY AVERAGE RETAIL PRICES - ITEM SPECIFICATIONS**

**Detailed Specification**

**Beef**

**Sirloin steak.** Cut from section of hind quarter next to short loin, bone-in or bone-out, fresh, Canada A or B brand, 1 kg.

**Round steak.** Cut from the inside part of the round in the hip section, fresh, Canada A or B brand, 1 kg.

**Prime rib roast.** Standing, bone-in, short cut, any ribs within the first five of standard seven, fresh, Canada A or B brand, 1 kg.

**Blade roast (blade out).** Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

**Blade roast (blade in).** Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

**Stewing beef.** Boneless stewing beef, fresh, Canada A or B brand, 1 kg.

**Ground beef, regular.** Ground beef, with 24% to 30% fat content, fresh, 1 kg.

**Pork**

**Bacon.** Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line, 500 g.

**Pork, centre cut chops.** Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, 1 kg.

**Pork, butt roast.** Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boneless Butt**, 1 kg.

**Pork, butt roast.** Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boston Butt**, 1 kg.

**PRIX DE DÉTAIL MOYENS PAR VILLE - SPÉCIFICATIONS DES ARTICLES**

**Spécification détaillée**

**Boeuf**

**Bifteck de surlonge.** Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou désossé, frais, marque Canada A ou B, 1 kg.

**Bifteck dans la ronde.** Coupé dans la partie de la ronde, située à l'intérieur de la cuisse de l'animal, frais, marque Canada A ou B, 1 kg.

**Rôti de côtes de choix.** Nature, non désossé, coupe courte, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, 1 kg.

**Rôti de palette (désossé).** Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

**Rôti de palette (non désossé).** Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

**Boeuf à ragoût.** Désossé, boeuf à ragoût, frais, marque Canada A ou B, 1 kg.

**Boeuf haché régulier.** Boeuf haché, matières grasses: 24% à 30%, frais, 1 kg.

**Porc**

**Bacon.** Marques des fabricants largement distribuées (sauf les marques des magasins), bacon de flanc, fumé, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité, 500 g.

**Porc, côtelettes, partie du centre.** Coupe provenant du centre de la longe, fraîches, non désossées, parées, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, 1 kg.

**Porc, rôti de porc.** Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, rôti désossé, 1 kg.

**Porc, rôti de porc.** Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, "**Boston Butt**", 1 kg.

## Other Meat

**Wieners.** Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, 454 g.

## Poultry

**Chicken.** Eviscerated, fresh or frozen, broiler or fryer, whole, 1 to 2 kg, Grade A, price per kg.

## Fish

**Cod filets.** Generally available manufacturers' brands (store brands excluded), frozen, 454 g. package.

**Salmon.** Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 220 g. tin.

## Dairy Products

**Milk.** Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 litre.

**Milk 2%.** Fresh 2% M.F. partly skimmed milk, pasteurized and may contain vitamins "A" and "D". Disposable carton of 1 litre.

**Butter.** Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 454 g.

**Cheese.** Generally available manufacturers' brands (store brands excluded), process cheese food square slices, with skim milk powder and/or whey powder added, plain without seasoning or condiments, individually wrapped, 250 g.

**Powdered milk.** Generally available manufacturers' brands (store brands excluded), powdered skim milk, 1.5 kg. card-board package, may be pasteurized or vitaminized.

**Evaporated milk.** Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 ml. can.

**Eggs.** Large eggs, Grade A, in a carton of 1 dozen.

## Autre viande

**Saucisses de Francfort.** Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, 454 g.

## Volaille

**Poulet.** Vidé, frais ou congelé, à griller ou à frire, entier, de 1 à 2 kg, catégorie A, vendu au kg.

## Poisson

**Filets de morue.** Marques des fabricants largement distribuées (sauf les marques des magasins), congelés, paquet de 454 g.

**Saumon.** Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 220 g.

## Produits laitiers

**Lait.** Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 litre (en carton), non consigné.

**Lait 2%.** Lait frais, partiellement écrémé, 2% de matières grasses de lait, pasteurisé, pouvant être additionné de vitamines A ou D. Contenant de 1 litre (en carton), non consigné.

**Beurre.** Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 454 g.

**Fromage.** Marques des fabricants largement distribuées (sauf les marques des magasins), préparation de fromage fondu, tranches carrées avec lait écrémé en poudre et (ou) poudre de lactosérum, sans assaisonnement, ni condiment, enveloppées individuellement, 250 g.

**Lait en poudre.** Marques des fabricants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 1.5 kg, peut être pasteurisé ou vitaminé.

**Lait évaporé.** Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 ml.

**Oeufs.** Oeufs de grosse taille, catégorie A, en boîte de 12.

## Bakery and Cereal Products

**Flour, 2.5 kg.** Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types.

**Macaroni.** Generally available manufacturers' brands (store brands excluded) dry, tubular shape macaroni, 500 g package.

**Corn flakes.** Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package.

**Bread.** Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

**Bread.** Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

**Soda crackers.** Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 450 g.

## Fruit

**Bananas.** First grade, price per kg.

**Grapefruit.** United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per kg.

**Oranges.** California, medium size (138 or 113) price per kg.

**Orange juice.** Generally available manufacturers' brands (store brands excluded), unsweetened or 5% sugar added, 1.36 litre.

## Vegetables

**Cabbage.** Fresh, domestic or imported, green cabbage, good quality, price per kg of an average size head.

**Carrots.** Tops completely removed, good quality, in plastic or cellophane packages price per kg.

**Celery.** Celery stalks, green, fresh, may be trimmed or clipped, price per kg.

**Lettuce.** Fresh head, green, good quality, average size head, price per kg.

**Onions.** Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages price per kg.

## Céréales et produits de boulangerie

**Farine, 2.5 kg.** Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prêtamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine.

**Macaroni.** Marques des fabricants largement distribuées (sauf les marques des magasins), macaroni, forme tubulaire, paquet de 500 g.

**Flocons de maïs.** Marques des fabricants largement distribuées (sauf les marques des magasins), maïs en flocons, paquet de 675 g.

**Pain.** Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

**Pain.** Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

**Biscuits soda.** Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 450 g.

## Fruits

**Bananes.** Première qualité, vendues au kg.

**Pamplemousses.** Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix au kg.

**Oranges.** De Californie, grosseur moyenne (138 ou 113) prix au kg.

**Jus d'orange.** Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré ou additionné de 5% de sucre, boîte de 1.36 litre.

## Légumes

**Choux.** Frais, variété canadienne ou importée, choux vert, bonne qualité, prix au kg d'un chou de grosseur moyenne.

**Carottes.** Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane, vendues au kg.

**Céleri.** Pieds de céleri, verts, frais, peuvent être taillés, prix au kg.

**Laitue.** Fraîche, verte, bonne qualité, taille moyenne, prix au kg.

**Oignons.** Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane, vendus au kg.

## Vegetables - Concluded

**Potatoes.** Table potatoes, white, Canada No. 1, 4.54 kg.

**Turnips.** May be waxed, good quality, price per kg.

**French fried potatoes.** Generally available manufacturers' brands (store brands excluded), frozen, straight or regular cut, grade A or fancy, 1 kg. poly bag.

**Beans.** Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 398 ml.

**Tomatoes, canned.** Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 796 ml.

**Tomato juice.** Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 1.36 litre.

## Sugar and Sweets

**Sugar.** White, granulated, cane or beet sugar, bag of 2 kg.

## Beverages

**Coffee, roasted.** Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 369 g. bag.

**Coffee, instant.** Generally available manufacturers' brands (store brands excluded), dried coffee, extract soluble, pure or may have added dextrin, dextrose or maltose, 283 g.

**Tea bags.** Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 60 two-cup paper bags (227 g.).

## Fats

**Shortening.** Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 454 g.

## Légumes - fin

**Pommes de terre.** Pommes de terre de table, à chair blanche, catégorie Canada n<sup>o</sup> 1, sac de 4.54 kg.

**Navets.** Peuvent être cirés, bonne qualité, prix au kg.

**Pommes de terre frites.** Marques des fabricants largement distribuées (sauf les marques des magasins), congelées, coupe ordinaire ou droite, catégorie A ou de fantaisie, sac de 1 kg. en matière plastique.

**Fèves au lard.** Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 398 ml.

**Tomates, en conserve.** Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 796 ml.

**Jus de tomates.** Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 1.36 litre.

## Sucre et produits sucrés

**Sucre.** Blanc, cristallisé, de canne ou de betterave, sac de 2 kg.

## Boissons

**Café torréfié.** Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers; ordinaire ou moulu "tout usage", bonne qualité, sac de 369 g.

**Café instantané.** Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 283 g.

**Thé en sachets.** Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 60 sachets de papier pour deux tasses chacun (227 g.).

## Matières grasses

**Graisse végétale.** Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100%. Peut être partiellement hydrogénée, carton de 454 g.

## Miscellaneous Groceries

**Tomato ketchup.** Generally available manufacturers' brands (store brands excluded), made from juice of ripe tomatoes, sugar, vinegar and seasonings, 1 litre bottle.

**Soup.** Generally available manufacturers' brands (store brands excluded) of vegetable soup, 284 ml.

**Infants' food.** Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 128 ml.

**Peanut butter.** Generally available manufacturers' brands (store brands excluded), made from roasted peanuts; may be labelled smooth or creamy, 500 g.

**Jelly powder.** Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 85 g.

**Soft drinks.** Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. On bottle of 750 ml.

## Supplies and Personal Care Items

**Synthetic detergent powder.** Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 6 litres.

**Facial Tissue.** Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 20.6 cm x 23.9 cm.

**Bathroom Tissue.** Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, one or two ply sheets. Units of 4, about 600 to 650 sheets per roll, approx. 10.16 cm x 12.7 cm, wrapped in poly.

**Toothpaste.** Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 100 ml.

**Toilet soap.** Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in multiple units of three or four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

## Articles divers d'épicerie

**Ketchup aux tomates.** Marques des fabricants largement distribuées (sauf les marques des magasins), fait de jus de tomates mûres, de sucre, de vinaigre et d'assaisonnements, bouteille de 1 litre.

**Soupe.** Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte de 284 ml.

**Nourriture pour bébés.** Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 128 ml.

**Beurre d'arachides.** Marques des fabricants largement distribuées (sauf les marques des magasins), fait à partir d'arachides torréfiées; l'étiquette peut porter la mention "crémeux", 500 g.

**Poudre à gelée.** Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 85 g.

**Boissons gazeuses.** Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 ml.

## Fournitures et articles de soins personnels

**Détergent synthétique en poudre.** Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 6 litres.

**Papier mouchoir.** Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double épaisseur, taille approximative de 20.6 cm x 23.9 cm.

**Papier hygiénique.** Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, simple ou double épaisseur. Paquets de 4, d'environ 600 à 650 feuilles par rouleau, 10.16 cm x 12.7 cm, enveloppés dans du polyéthylène.

**Pâte dentifrice.** Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 100 ml.

**Savon de toilette.** Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en groupe de trois ou quatre pains par paquet. Les savons de taille pour invité ou de bain, de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

## Supplies and Personal Care Items - Concluded

### Tobacco

**Cigarettes.** Generally available popular brands, king size, filter tip, carton of 200.

#### 4. Average Retail Prices for Gasoline

Tables 14 through 19 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the fifteen urban centres for which Consumer Price Indexes are produced and cover the time period January 1982 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

#### 5. Average Retail Prices for Fuel Oil

Table 20 presents average retail prices for fuel oil. The information is collected four times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 20 are confined to the fifteen urban centres for which Consumer Price Indexes are produced and for the time period January 1982 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

## Fournitures et articles de soins personnels - fin

### Tabacs

**Cigarettes.** Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

#### 4. Prix de détail moyens de l'essence

Les tableaux 14 à 19 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux quinze centres urbains pour lesquels on produit un I.P.C. pour la période allant de janvier 1982 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

#### 5. Prix de détail moyens du mazout

Le tableau 20 présente les prix de détail moyens du mazout. Cette information est relevée quatre fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 20 se limitent aux quinze centres urbains pour lesquels on produit un I.P.C. pour la période allant de janvier 1982 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

## Appendix 5

### CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 21 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.<sup>1</sup>

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

## Appendice 5

### COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 21 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville<sup>1</sup> pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

<sup>1</sup> See Table 13 and Appendix 4.

<sup>1</sup> Voir tableau 13 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

#### FOOTNOTES FOR TABLE 21

- (2) The weights shown are rounded 1978 weights as contained in the report *The Consumer Price Index, Reference Paper, Updating Based on 1978 Expenditures, Concepts and Procedures, (Occasional), Catalogue 62-553*. They are provided for illustration only: the weights actually used are combined cities weights with adjustments for price change since 1978.
- (3) Does not include water, fuel and electricity.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

#### NOTES POUR LE TABLEAU 21

- (2) Les poids indiqués sont les poids pour 1978 figurant dans *L'Indice des prix à la consommation, document de référence, mise à jour fondée sur les dépenses de 1978, concepts et procédés (hors-série), n° 62-553* au catalogue. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinées ajustés en fonction des variations des prix observées depuis 1978.
- (3) Ne comprend pas l'eau, le combustible et l'électricité.

## Appendix 6

### INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

## Appendice 6

### COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post index should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

For the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada.

Groupe principal de produits	Nombre d'articles dont le prix est relevé (lorsque disponibles)

## Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Consumer Prices Section,  
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9606) or to the Statistics Canada reference centre in:

St. John's (772-4073)	Sturgeon Falls (753-4888)
Halifax (426-5331)	Winnipeg (949-4020)
Montréal (283-5725)	Regina (359-5405)
Ottawa (990-8116)	Edmonton (420-3027)
Toronto (966-6586)	Vancouver (666-3691)

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

## How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

## Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingué et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des prix à la consommation,  
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9606) ou au centre de consultation de Statistique Canada à:

St. John's (772-4073)	Sturgeon Falls (753-4888)
Halifax (426-5331)	Winnipeg (949-4020)
Montréal (283-5725)	Regina (359-5405)
Ottawa (990-8116)	Edmonton (420-3027)
Toronto (966-6586)	Vancouver (666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux utilisateurs qui habitent à l'extérieur des zones de communication locale des centres régionaux de consultation.

## Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

## NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series shown in the publication. For further information on CANSIM call (613) 990-8200 or write Cansim Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

**Denis J. Desjardins**, Director,  
Prices Division

**J. Arthur Ridgeway**, Chief,  
Consumer Prices Section

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

## NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 990-8200 ou écrire à, Division Cansim, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

Cette publication a été rédigée sous la direction de:

**Denis J. Desjardins**, directeur,  
Division des prix

**J. Arthur Ridgeway**, chef  
Section des prix à la consommation

## Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements for each of the three months in the reference quarter, at both the urban Canada and the regional cities' level. This is presented in the form of descriptive analysis supported by tabular and graphic information.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part IV of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

## Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation de chaque mois du trimestre pour le Canada et les agglomérations urbaines. Ces informations sont présentées sous la forme d'analyses descriptives appuyées de tableaux et de graphiques.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégré.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie IV de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes.

Les appendices servent de référence aux données statistique présentées, dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthodologie des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

OCTOBER 1984

## Canada

The Consumer Price Index (CPI) for Canada (1981=100) rose 0.2% to a level of 123.2 in October, thereby further extending the trend of moderate increases which has generally been observed during the course of 1984. This rise largely resulted from a 0.7% increase in the Housing index and a 1.5% increase in the Tobacco and Alcohol index, these increases having been only partially offset by a 1.1% decrease in the Transportation index. The Food index remained unchanged overall in October while the All-items excluding Food index rose by 0.2%.

The year-to-year increase in the CPI, as measured by comparing the index level for October 1984 to that of October 1983, was 3.4%, down from the 3.8% increase in September and the lowest year-over-year rise registered since August and September 1971 when it also stood at 3.4%. This decline in the year-over-year change was largely the result of the Food index having remained unchanged overall this October whereas it had risen by 1.1% in October 1983.

The Food index remained unchanged overall between September and October, as a 0.2% decrease in the index for Food Purchased from Stores was offset by a 0.4% increase in the index for Food Purchased from Restaurants. In the Food Purchased from Stores index, decreases in fruit prices, notably for apples, combined with lower prices for poultry, primarily turkeys, completely offset increases in the prices of beef, milk and vegetables. The index for Food Purchased from Stores now stands 4.6% above its level of October 1983 while the index for Food Purchased from Restaurants is 3.9% higher than it was in October 1983. As a result, the aggregate Food index stood 4.4% higher than its October 1983 level. This rate was down from the year-over-year increase of 5.6% recorded in September.

The 0.2% increase in the All-items excluding Food index was largely attributable to higher property taxes and increased prices for Tobacco and Alcohol products. Property taxes, adjusted once a year, advanced on average by 5.6% in 1984. (The education component of property taxes for urban centres in the province of Québec can only be determined later in the year and as a result will only be reflected in early 1985). An increase of 1.5% in the Tobacco and Alcohol index, primarily due to the delayed impact of the September 1st increase in the federal excise tax as well as some provincial tax increases, also contributed to the advance in the All-items excluding

OCTOBRE 1984

## Canada

L'indice des prix à la consommation (IPC) pour le Canada (1981=100) a progressé de 0.2% en octobre pour s'établir à 123.2, poursuivant ainsi la tendance aux hausses modérées qui a généralement été observée au cours de 1984. Cette augmentation est principalement le résultat des hausses de 0.7% de l'indice de l'habitation et de 1.5% de l'indice des tabacs et des boissons alcoolisées, ces hausses n'ayant été qu'en partie compensées par la baisse de 1.1% de l'indice des transports. L'indice des aliments n'a affiché aucun changement global en octobre, alors que l'indice d'ensemble sans les aliments a gagné 0.2%.

La progression d'une année à l'autre de l'IPC, calculée en comparant l'indice d'octobre 1984 à celui d'octobre 1983, a été de 3.4%, en baisse par rapport au taux de progression de 3.8% enregistré en septembre et la plus faible augmentation d'une année à l'autre depuis août et septembre 1971, qui était aussi de 3.4%. Ce fléchissement du taux de progression d'une année à l'autre est surtout attribuable à l'indice des aliments qui est resté globalement inchangé en octobre 1984, alors qu'il avait haussé de 1.1% en octobre 1983.

L'indice des aliments n'a affiché aucun changement global en octobre, la diminution de 0.2% de l'indice des aliments achetés au magasin ayant été contrebalancée par l'augmentation de 0.4% de l'indice des aliments achetés au restaurant. S'agissant de l'indice des aliments achetés au magasin, les diminutions de prix pour les fruits, notamment pour les pommes, conjuguées à la baisse des prix de la volaille, surtout ceux de la dinde, ont complètement annulé les hausses des prix du boeuf, du lait et des légumes. L'indice des aliments achetés au magasin dépasse maintenant de 4.6% son niveau d'octobre 1983, alors que l'indice des aliments achetés au restaurant s'établit à un niveau supérieur de 3.9% à celui d'octobre 1983. En conséquence, l'indice agrégatif des aliments a gagné 4.4% sur son niveau d'octobre 1983, en baisse par rapport à l'accroissement de 5.6% enregistré en septembre.

L'augmentation de 0.2% de l'indice d'ensemble sans les aliments est attribuable surtout à la montée des impôts fonciers et au renchérissement des tabacs et des boissons alcoolisées. Les impôts fonciers ont augmenté en moyenne de 5.6% en 1984. (Les impôts fonciers sont relevés une fois par année, les changements étant incorporés à l'indice d'octobre. Pour ce qui est des centres urbains de la province de Québec, la partie des impôts fonciers touchant le domaine scolaire est incorporée au début de l'année suivante). Une augmentation de 1.5% de l'indice des tabacs et des boissons alcoolisées, à cause principalement de l'effet à retardement de la hausse de la taxe d'accise fédérale du 1<sup>er</sup> septembre ainsi que du relèvement de certaines

Food index. Other notable price increases included those for furniture, clothing and admissions to sports events. A significant decrease in air fares, in part the result of "seat sales" in effect in October, partially offset the impact of these increases. Between October 1983 and October 1984, the index for All-items excluding Food increased by 3.1%, down from the increase of 3.3% observed in September.

Viewed in terms of goods and services, the price level for goods rose 0.3% in October while that for services remained unchanged overall. Between October 1983 and October 1984, the price level for goods rose 3.5%, virtually the same rate as the 3.4% increase for services.

On a seasonally-adjusted basis, the All-items index increased by 0.1% between September and October, with the Food index and the All-items excluding Food index each having risen by 0.2% (this apparent anomaly is due to rounding). During the three-month period July to October, the All-items index rose at a seasonally-adjusted compounded annual rate of change of 1.6%.

### City Highlights

Between September and October, consumer price changes in cities for which CPI's are published ranged from a decline of 0.5% in Calgary to an increase of 0.8% in Winnipeg. The decline in Calgary was due to lower beef prices and lower transportation costs as prices for gasoline and air travel decreased. The higher than average rise in Winnipeg was largely the result of higher increases for gasoline due to the end of "price wars".

taxes provinciales a également contribué à l'avance de l'indice d'ensemble sans les aliments. Parmi les autres augmentations de prix notables, mentionnons celles de l'ameublement, de l'habillement et de l'entrée aux activités sportives. Une diminution significative des tarifs aériens, en partie à cause des soldes de places en octobre, a partiellement compensé ces hausses. Entre octobre 1983 et octobre 1984, l'indice d'ensemble sans les aliments a avancé de 3.1%, en baisse par rapport au taux de 3.3% observé en septembre.

Du point de vue des biens et des services, les prix des biens ont augmenté de 0.3% en octobre alors que ceux de services demeuraient globalement inchangés. Entre octobre 1983 et octobre 1984, les prix des biens ont gagné 3.5%, soit un taux de progression pratiquement identique à celui des services (3.4%).

Après désaisonnalisation, l'indice d'ensemble a augmenté de 0.1% entre septembre et octobre sous l'effet d'un accroissement de 0.2% pour l'indice des aliments de même que pour l'indice d'ensemble sans les aliments (cette anomalie apparente est due à l'arrondissement). Au cours de la période de trois mois allant de juillet à octobre, l'indice d'ensemble a affiché un taux de progression annuel composé désaisonnalisé de 1.6%.

### Points saillants des indices des villes

Entre septembre et octobre, les changements des prix à la consommation dans les villes pour lesquelles on publie un IPC se sont échelonnés entre une baisse de 0.5% à Calgary et une augmentation de 0.8% à Winnipeg. Le recul à Calgary est imputable à la diminution des prix du boeuf et à la baisse des frais de transport, les prix de l'essence et les tarifs aériens ayant fléchi. L'augmentation supérieure à la moyenne à Winnipeg est principalement due aux majorations des prix de l'essence en raison de la fin des "guerres de prix".

## Canada

The Consumer Price Index (CPI) for Canada (1981=100) rose 0.6% to a level of 124.0 in November. This rise was principally attributable to a 2.1% increase in the Transportation index, largely resulting from higher prices for new automobiles and for gasoline. The Food index remained unchanged overall for the second consecutive month, while the All-items excluding Food index rose by 0.7%.

The year-to-year increase in the CPI, as measured by comparing the index level for November 1984 to that of November 1983, was 4.0%, up from the 3.4% increase registered in October. This rise in the year-to-year increase in the index was largely attributable to the fact that, in November 1983, the Food index declined as did gasoline and fuel oil prices, while in November 1984, the Food index remained unchanged and gasoline and fuel oil prices rose significantly.

The Food index remained unchanged overall in November as a slight decline of 0.1% in the index for Food Purchased from Stores was offset by an increase of 0.2% in the index for Food Purchased from Restaurants. In the Food Purchased from Stores index, price decreases for fresh fruit, beef and pork products were largely offset by higher prices for fresh vegetables, notably lettuce, and for milk, eggs and poultry, primarily turkeys. The index for Food Purchased from Stores now stands 5.4% above its level of November 1983 while the index for Food Purchased from Restaurants is 3.9% higher than it was in November 1983. The resulting year-to-year increase in the aggregate Food index was 5.0%, up from the 4.4% recorded in October.

The 0.7% increase in the All-items excluding Food index was largely the result of a 2.4% increase in the index for Private Transportation. This increase was principally due to two factors. First, after adjustment for quality change, 1985 new car prices rose an average of 3.0% over the 1984 model car prices prevailing in October. Secondly, gasoline prices rose 3.7% on average, the combined result of price increases emerging from the end of "price wars" in many southern Ontario urban centres and a general rise in prices following the increase in the Petroleum Compensation Charge announced in the Economic Statement of November 8th. The increase in the Petroleum Compensation Charge also led to a 5.5% increase in fuel oil prices. Other notable price increases were also observed for women's and men's wear items as well as for

## Canada

L'indice des prix à la consommation (IPC) pour le Canada (1981=100) a progressé de 0.6% en novembre pour s'établir à 124.0. Cette augmentation est avant tout le résultat d'une hausse de 2.1% de l'indice des transports, principalement attribuable à la hausse du prix des nouvelles automobiles et de l'essence. L'indice des aliments n'a affiché aucun changement global pour le deuxième mois consécutif, alors que l'indice d'ensemble sans les aliments gagnait 0.7%.

La progression d'une année à l'autre de l'IPC, calculée en comparant l'indice de novembre 1984 à celui de novembre 1983, a été de 4.0%, en hausse par rapport à l'augmentation de 3.4% enregistrée en octobre. Cette accélération de l'augmentation d'une année à l'autre de l'indice est en grande partie attribuable à ce qu'en novembre 1983, l'indice des aliments avait baissé, comme les prix de l'essence et du mazout, alors qu'en novembre 1984, l'indice des aliments n'a pas varié et les prix de l'essence et du mazout ont augmenté de façon significative.

L'indice des aliments n'a affiché aucun changement en novembre, la légère diminution de 0.1% de l'indice des aliments achetés au magasin ayant été contrebalancée par l'augmentation de 0.2% de l'indice des aliments achetés au restaurant. S'agissant de l'indice des aliments achetés au magasin, les diminutions de prix des fruits frais et des produits du boeuf et du porc ont en grande partie été contrebalancées par la hausse des prix des légumes frais, notamment de la laitue, et du lait, des oeufs et de la volaille, surtout la dinde. L'indice des aliments achetés au magasin dépasse maintenant de 5.4% son niveau de novembre 1983, alors que l'indice des aliments achetés au restaurant s'établit à un niveau supérieur de 3.9% à celui de novembre 1983. En conséquence, l'indice agrégatif des aliments a gagné 5.0%, en hausse par rapport à l'augmentation de 4.4% en octobre.

L'augmentation de 0.7% de l'indice d'ensemble sans les aliments est surtout attribuable à une hausse de 2.4% de l'indice du transport privé. Elle s'explique principalement par deux facteurs. Premièrement, après ajustement pour le changement de la qualité, les prix des nouvelles automobiles de modèle 1985 ont augmenté de 3.0% par rapport à ceux observés en octobre pour les voitures de modèle 1984. Deuxièmement, les prix de l'essence ont progressé de 3.7% en moyenne, en raison de la fin des "guerres des prix" dans bon nombre de centres urbains du sud de l'Ontario et d'une hausse généralisée des prix découlant de l'augmentation de la taxe d'indemnisation pétrolière annoncée dans l'exposé économique du 8 novembre. L'augmentation de la taxe d'indemnisation pétrolière a aussi entraîné une hausse de 5.5% du prix du mazout. Parmi les autres augmentations notables de prix, mentionnons les vêtements pour hommes et pour femmes ainsi que

cigarettes and beer. Partially offsetting these increases were price declines for furniture and train and air fares. Between November 1983 and November 1984, the index for All-items excluding Food increased by 3.7%, up from the increase of 3.1% observed in October.

Viewed in terms of goods and services, the price level for goods rose 0.8% in November while that for services increased 0.2%. Between November 1983 and November 1984, the price level for goods increased 4.3% and that for services rose 3.5%.

On a seasonally-adjusted basis, the All-items index increased 0.7% between October and November, with the Food index and the All-items excluding Food index each having risen by 0.6% (this apparent anomaly is due to rounding). During the three-month period August to November, the All-items index rose at a seasonally-adjusted compounded annual rate of change of 4.1%.

#### City Highlights

Between October and November, consumer price changes in cities for which CPI's are published ranged from a decrease of 0.2% in Winnipeg to an increase of 0.7% in Halifax, Saint John, Ottawa and Saskatoon. The decline in Winnipeg was largely the result of "price wars" for gasoline. In November, 12 of the 15 cities had price increases in the range of 0.4% to 0.7%.

les cigarettes et la bière. Ces accroissements sont en partie compensés par la baisse de prix des meubles et des tarifs des voyages par train et par avion. Entre novembre 1983 et novembre 1984, l'indice d'ensemble sans les aliments a avancé de 3.7%, en hausse par rapport à l'augmentation de 3.1% observée en octobre.

Du point de vue des biens et des services, les prix des biens ont augmenté de 0.8% en novembre, alors que ceux des services ont augmenté de 0.2%. Entre novembre 1983 et novembre 1984, les prix des biens ont gagné 4.3% et ceux des services, 3.5%.

Après désaisonnalisation, l'indice d'ensemble a augmenté de 0.7% entre octobre et novembre sous l'effet d'un accroissement de 0.6% pour l'indice des aliments de même que pour l'indice d'ensemble sans les aliments (cette anomalie apparente est dûe à l'arrondissement). Au cours de la période de trois mois allant d'août à novembre, l'indice d'ensemble a affiché un taux de progression annuel composé désaisonnalisé de 4.1%.

#### Point saillants des indices des villes

Entre octobre et novembre, les changements des prix à la consommation dans les villes pour lesquelles ont publié un IPC se sont échelonnés entre une baisse de 0.2% à Winnipeg et une augmentation de 0.7% à Halifax, Saint John, Ottawa et Saskatoon. Le recul à Winnipeg est, en grande partie, imputable aux "guerres des prix" de l'essence. En novembre, 12 des 15 villes ont enregistré des hausses de prix comprises entre 0.4% et 0.7%.

## Canada

The Consumer Price Index (CPI) for Canada (1981=100) rose 0.1% to a level of 124.1 in December. This marginal increase reflected the net result of increases in the Housing and Transportation components having been almost completely offset by lower charges for clothing and recreational items. The Food index remained unchanged overall for the third consecutive month, while the All-items excluding Food index rose a marginal 0.1%.

The year-to-year increase in the CPI, as measured by comparing the index level of December 1984 to that of December 1983, was 3.8%, down from the 4.0% registered in November. On an annual average basis, i.e. comparing the average of the twelve monthly indexes for the years 1983 and 1984, the CPI increased by 4.4%, down from the 5.8% rise registered between 1982 and 1983, representing the smallest annual increase since 1971.

The Food index remained unchanged overall in December as a slight decline of 0.1% in the index for Food Purchased from Stores offset an increase of 0.4% in the index for Food Purchased from Restaurants. In the Food Purchased from Stores index, price decreases for poultry, fresh fruit (notably oranges), salad vegetables and soft drinks for home consumption were largely offset by price increases for beef, pork, dairy products and bread. The index for Food Purchased from Stores now stands 4.9% above its level of December 1983 while the index for Food Purchased from Restaurants is 4.1% higher than it was in December 1983. The resulting rise in the year-to-year increase in the aggregate Food index was 4.6%, down from the 5.0% recorded in November.

The marginal 0.1% increase in the All-items excluding Food index resulted from a number of significant but largely offsetting price changes. Higher prices for Housing resulted from increased charges for rent, cleaning supplies and furniture while the increase in the Transportation component was due to higher prices for gasoline and for overseas and southern holiday air fares. These price increases were largely offset by declines in the prices of men's and women's clothing and by lower prices for home entertainment equipment and hotel/motel accommodation rates. Between December 1983 and December 1984, the All-items excluding Food index rose by 3.5%, down from the increase of 3.7% observed in November.

## Canada

L'indice des prix à la consommation (IPC) pour le Canada (1981=100) a progressé de 0.1% pour s'établir à 124.1 en décembre. Cette faible augmentation est le résultat net des hausses des frais d'habitation et de transport, qui ont été pratiquement annulées par la baisse des prix des vêtements et des dépenses de loisirs. L'indice des aliments est demeuré globalement inchangé pour un troisième mois d'affilée, alors que l'indice d'ensemble sans les aliments n'augmentait que de 0.1%.

L'augmentation d'une année à l'autre de l'IPC, calculée en comparant l'indice de décembre 1984 à celui de décembre 1983, a été de 3.8%, en baisse par rapport au taux de progression de 4.0% enregistré en novembre. Sur la base d'une moyenne annuelle, c.-à-d. en comparant la moyenne des douzes indices mensuels de 1983 et de 1984, l'IPC a gagné 4.4%, soit une diminution par rapport à la montée de 5.8% enregistrée entre 1982 et 1983, la plus faible augmentation annuelle depuis 1971.

L'indice des aliments n'a affiché aucun changement global en décembre, la faible baisse de 0.1% de l'indice des aliments achetés au magasin ayant été contrebalancée par la hausse de 0.4% de l'indice des aliments achetés au restaurant. S'agissant de l'indice des aliments achetés au magasin, des diminutions de prix pour la volaille, les fruits frais (notamment les oranges), les légumes à salades et les boissons gazeuses consommées à la maison ont été grandement tempérées par les majorations des prix du boeuf, du porc, des produits laitiers et du pain. L'indice des aliments achetés au magasin dépasse maintenant de 4.9% son niveau de décembre 1983, alors que l'indice des aliments achetés au restaurant s'établit à 4.1% au-dessus du niveau de décembre 1983. En conséquence, l'augmentation d'une année à l'autre de l'indice agrégatif des aliments a été de 4.6%, en baisse par rapport au taux de 5.0% enregistré en novembre.

La modeste progression de 0.1% de l'indice d'ensemble sans les aliments est le résultat de plusieurs mouvements de prix importants mais en sens opposés. La montée des frais d'habitation découle de la hausse des prix des loyers, des produits de nettoyage et des meubles, alors que l'accroissement des frais de transport est le résultat du renchérissement de l'essence et des tarifs aériens relatifs aux voyages de vacances outre-mer et au sud. Ces hausses ont été largement compensées par les baisses de prix des vêtements pour femmes et pour hommes, du matériel de détente au foyer et des chambres d'hôtel/de motel. Entre décembre 1983 et décembre 1984, l'indice d'ensemble sans les aliments a avancé de 3.5%, en baisse par rapport à l'augmentation de 3.7% observée en novembre.

Viewed in terms of goods and services, the price level for goods remained unchanged overall in December while that for services rose 0.1%. Between December 1983 and December 1984, the price level for goods rose 4.0% and that for services rose 3.3%.

On a seasonally-adjusted basis, the All-items index increased 0.3% between November and December, with the Food index increasing 0.4% and the All-items excluding Food index rising 0.3%. During the three-month period September to December, the All-items index rose at a seasonally-adjusted compounded annual rate of change of 4.5%.

### City Highlights

Between November and December, consumer price changes in cities for which CPI's are published ranged from a decrease of 0.2% in Toronto and Winnipeg to an increase of 0.6% in St. John's. In November, 12 of the 15 cities had price increases in the range of -0.2% to 0.2%.

### Annual Averages

The Food index was the only major component that did not contribute to the deceleration in the rate of increase in the All-items index, from 5.8% in 1983 to 4.4% in 1984. The Food index accelerated to 5.6% from 3.7% between these two years, largely due to more rapid price increases for poultry, fruits and vegetables, coffee, tea and fats and oils. The major contributor to the deceleration in the All-items index was the slowing of the Housing index where smaller price increases for rent, mortgage interest, fuel oil and piped gas were major factors. Within the remaining five major components, notable contributions to the overall deceleration were made by lower rates of increase for gasoline, auto insurance premiums and tobacco products.

Du point de vue des biens et des services, les prix des biens sont demeurés inchangés globalement en décembre alors que ceux des services ont grimpé de 0.1%. Le niveau des prix s'est donc élevé de 4.0% pour les biens et de 3.3% pour les services entre décembre 1983 et décembre 1984.

Après désaisonnalisation, l'indice d'ensemble a augmenté de 0.3% entre novembre et décembre, l'indice des aliments ayant gagné 0.4% et l'indice d'ensemble sans les aliments, 0.3%. Au cours de la période de trois mois allant de septembre à décembre, l'indice d'ensemble a affiché un taux de progression annuel composé désaisonnalisé de 4.5%.

### Points saillants des indices des villes

Entre novembre et décembre, les changements des prix à la consommation dans les villes pour lesquelles on publie un IPC ont été comprises entre une diminution de 0.2% à Toronto et à Winnipeg et une augmentation de 0.6% à St. John's. En novembre, 12 des 15 villes ont affiché des augmentations variant entre -0.2% et 0.2%.

### Moyennes annuelles

L'indice des aliments est la seule grande composante à n'avoir pas contribué au ralentissement du taux de progression de l'indice d'ensemble, qui est passé de 5.8% en 1983 à 4.4% en 1984. Le taux d'accroissement de l'indice des aliments s'est accéléré, passant de 3.7% à 5.6% entre ces deux années, en raison surtout du renchérissement plus rapide de la volaille, des fruits et légumes, du café et du thé, et des huiles et corps gras. Le grand responsable du ralentissement de l'indice d'ensemble est l'indice de l'habitation, les principaux facteurs dans ce cas étant les faibles hausses des loyers, des taux hypothécaires, du mazout et du gaz canalisé. Parmi les cinq autres composantes principales, la diminution des taux d'augmentation de l'essence, des primes d'assurance-automobile et des prix de l'essence ont contribué de façon notable au ralentissement global.

#### Percentage Increase Based on Annual Averages (1984 over 1983) Augmentation en pourcentage fondée sur les moyennes annuelles (1984 par rapport à 1983)

Canada	4.4	Toronto	4.8
St. John's	4.4	Thunder Bay	4.9
Charlottetown/Summerside	4.3	Winnipeg	3.6
Halifax	4.4	Regina	4.4
Saint John	5.1	Saskatoon	3.5
Québec	3.7	Edmonton	2.7
Montréal	4.2	Calgary	2.5
Ottawa	5.0	Vancouver	4.0

## October, November and December in Retrospect

The All-items Consumer Price Index (CPI) for Canada rose by 0.9% between September and December 1984 (fourth quarter) reaching a level of 124.1 (1981=100) in December from 123.0 posted in September. The increase in the fourth quarter 1984 was slightly higher than the rise of 0.7% reported in the third quarter but was identical to the gain of 0.9% reported in the corresponding fourth quarter 1983.

The latest increase of 0.9% in the All-items index was entirely attributable to an advance of 1.0% in the All-items excluding Food index as the Food index recorded no overall change in this period. More than half of the increase in the All-items index was caused by higher Housing charges (up 1.3%) while an additional one third (approximately) originated from increases in the Transportation index (up 1.5%). A noticeable proportion of the overall increase was also traceable to higher prices for Tobacco and Alcohol products (up 2.0%).

The Food index registered no overall change in the fourth quarter following a decline of 0.5% reported in the third quarter. In the latest period the impact of a decline of 0.3% in the prices of Food Purchased from Stores was completely offset by a rise of 1.0% in the prices of Food Purchased from Restaurants. In the case of the former, the effect of seasonally lower prices for fresh fruit (mainly for oranges and grapefruit) combined with price declines for poultry, pork and soft drinks which were offset to a considerable extent by higher prices for beef, dairy products, bakery products and selected fresh vegetables.

The All-items excluding Food index rose by 1.0% in the fourth quarter equalling the gain registered in the previous quarter. Higher Housing charges (up 1.3%) followed by increased Transportation costs (up 1.5%) accounted for the bulk of the increase in this index. A significant part of the increase associated with these two indexes resulted from higher energy costs (up 3.9% in the fourth quarter compared to 0.9% in the previous quarter). This largely reflected the impact on the retail prices of gasoline and fuel oil of a rise of \$2.78 in the Petroleum Compensation Charge introduced on November 10. The influence exerted on the All-items excluding Food index due to a rise of 2.0% in the Tobacco and Alcohol index was also quite noticeable.

## Octobre, novembre et décembre en rétrospective

L'indice d'ensemble des prix à la consommation (IPC) pour le Canada a progressé de 0.9% entre septembre et décembre 1984 (quatrième trimestre), passant de 123.0 en septembre à 124.1 (1981=100) en décembre. L'augmentation au cours de cette dernière période est légèrement supérieure à celle de 0.7% enregistrée au troisième trimestre, mais elle est la même que la progression de 0.9% observée au quatrième trimestre de 1983.

La dernière augmentation de 0.9% de l'indice d'ensemble est entièrement attribuable à l'accroissement de 1.0% de l'indice d'ensemble sans les aliments, l'indice des aliments étant resté inchangé au cours de cette période. Plus de la moitié de l'augmentation de l'indice d'ensemble est due à la hausse des frais d'habitation (plus 1.3%) alors qu'un tiers (environ) est attribuable à l'accroissement de l'indice des transports (plus 1.5%). L'augmentation globale était également due en grande partie à la hausse du prix des tabacs et des boissons alcoolisées (plus 2.0%).

L'indice des aliments est resté dans l'ensemble inchangé au quatrième trimestre, après avoir baissé de 0.5% au troisième trimestre. Dans ce dernier cas, le recul de 0.3% du prix des aliments achetés au magasin a été entièrement annulé par la hausse de 1.0% du prix des aliments achetés au restaurant. Dans le premier cas, l'effet de la baisse saisonnière du prix des fruits frais (en particulier des oranges et des pamplemousses) ainsi que de la diminution du prix de la volaille, du porc et des boissons gazeuses était neutralisé dans une grande mesure par l'augmentation du prix du boeuf, des produits laitiers, de produits de boulangerie et de certains légumes frais.

L'indice d'ensemble sans les aliments a augmenté de 1.0% au quatrième trimestre, soit autant que le trimestre précédent. L'accroissement de cet indice est dû en grande partie à l'augmentation des frais d'habitation (plus 1.3%) et des frais de transport (plus 1.5%). La hausse de ces deux indices est essentiellement imputable à la montée du prix de l'énergie (plus 3.9%) au quatrième trimestre, contre 0.9% le trimestre précédent), la majoration de \$2.78 du prélèvement d'indemnisation pétrolière adoptée le 10 novembre s'étant répercutée sur le prix de détail de l'essence et du mazout. La progression de 2.0% de l'indice des tabacs et des boissons alcoolisées a également exercée une forte influence sur l'indice d'ensemble sans les aliments.

The Housing index rose by 1.3% in the fourth quarter posting a sharp acceleration over the 0.8% reported in the third quarter. Both rented and owned accommodation charges rose noticeably in the latest period, the latter being influenced to a large extent by an average annual increase (reported in the month of October) of 5.6% in property taxes. At the same time higher prices were reported for fuel oil, furniture and household cleaning supplies.

The Transportation index advanced by 1.5%, also up sharply from the increase of 0.6% reported in the previous quarter. The major part of this latest increase was associated with an advance in gasoline prices (up 5.4%) and higher prices for the 1985 model passenger cars. A considerable proportion of the overall increase in the Transportation index was weakened by a sharp decline in air fares largely the outcome of "seat-sales" and seasonal price declines in selected routes.

The Tobacco and Alcohol index climbed by 2.0% in the fourth quarter following a much smaller rise of 1.2% observed in the third quarter. Much of the explanation for the sharper rise in the latest period was related to the lagged impact of the September 1 rise in the indexed Federal Excise Taxes on such products.

Among the remaining major components, the Health and Personal Care index advanced by 0.5% with most of the increase concentrated in personal care services. The Clothing index was up by a marginal 0.2% as selected women's wear prices rose by 0.2% while men's wear prices fell on average by 0.4%. The Recreation, Reading and Education index fell by 0.1% as selected Recreation charges fell by 0.6% in response mainly to seasonal declines in hotel/motel accommodation charges. At the same time the Reading index rose by 2.2% as higher prices for newspapers and magazines were observed.

L'indice de l'habitation a avancé de 1.3% au quatrième trimestre, soit un taux de progression très supérieur à celui de 0.8% observé au troisième trimestre. Les frais de logement en location et de logement en propriété ont fortement augmenté au cours de la dernière période; dans le dernier cas, l'accroissement était dû en grande partie à la progression annuelle moyenne (enregistrée en octobre) de 5.6% de l'impôt foncier. Le prix du mazout, des meubles et des produits d'entretien ménager a également monté au cours de la même période.

L'indice des transports s'est accru de 1.5%, une croissance sensible par rapport à la hausse de 0.6% observée le trimestre précédent. Cette dernière majoration était essentiellement due à la montée en flèche du prix de l'essence (plus 5.4%) et de celui des voitures de 1985. La chute des tarifs aériens, essentiellement due aux "soldes de places" et à la baisse saisonnière des tarifs pour certaines destinations, a neutralisé une grande partie de la hausse de l'indice des transports.

L'indice des tabacs et des boissons alcoolisées a grimpé de 2.0% au quatrième trimestre, après une progression beaucoup plus faible de 1.2% au troisième trimestre. Cette augmentation substantielle au cours de la dernière période est imputable à l'effet retardé du relèvement, au 1<sup>er</sup> septembre, de la taxe d'accise fédérale indexée sur ces produits.

Pour ce qui est des autres composantes, l'indice de la santé et des soins personnels a gagné 0.5%, l'augmentation touchant surtout les services de soins personnels. L'indice de l'habillement a affiché une faible hausse de 0.2% en raison de l'augmentation de 0.2% du prix de certains vêtements pour femmes et de la baisse de 0.4% du prix des vêtements pour hommes. L'indice des loisirs, de la lecture et de la formation a fléchi de 0.1% en raison de la réduction de 0.6% des frais de certains loisirs, qui est essentiellement due à la baisse saisonnière des frais d'hôtel et de motel. Au cours de la même période, on a observé un accroissement de 2.2% de l'indice de la lecture en raison de la majoration du prix des journaux et des magazines.

(1) Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.

(2) Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.

(3) Whitehorse n'est pas inclus dans les moyennes pondérées des villes.

(4) Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.

(5) Chicoutimi (450 g), Québec (900 g).

## Appendix 1

### THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e. price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for twenty-six cities are available at present in Part IV of this publication. Inter-spatial indexes covering approximately two-thirds of the CPI basket for a selected number of cities are also available in this section.

#### Coverage

Beginning with the March to April 1982 price change, the weights used in the Consumer Price Index are those pertaining to 1978 expenditure patterns. Data used for establishing these patterns were obtained through the 1978 Family Expenditure Surveys. The expenditures are those reported by all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1978 revealed 64 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 64 urban centres into 31 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

## Appendice 1

### L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour vingt-six villes, à la Partie IV de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

#### Champ d'observation

À compter d'avril 1982, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1978. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1978. Les dépenses sont celles qu'ont déclarées tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1978, 64 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 64 centres urbains en 31 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 15 of these centres which, together, accounted for approximately 70% of the total 1978 current consumption expenditures reported in the 64 centres. These 15 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 400 commodities are priced in each of these 15 cities while in the remaining 49 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

### Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

### Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 15 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1978 par les 64 centres. Les 15 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 400 produits dans chacune des 15 villes; ce nombre est plus faible dans les 49 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

### Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

### Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1974 family expenditure patterns were used to compile the CPI from October 1978 to March 1982. In April 1982 the 1974 weights were replaced by those derived from the expenditure patterns of 1978. With the introduction of the 1974 weights, Statistics Canada adopted a policy to update weights on a regular four-year cycle.

La composition des dépenses des familles de 1974 a servi au calcul de l'IPC à partir d'octobre 1978 jusqu'à mars 1982. En avril 1982, les pondérations de 1974 ont été remplacées par d'autres dérivées de la composition des dépenses de 1978. Depuis l'introduction des pondérations de 1974, Statistique Canada a comme politique de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE 1. Comparison of 1974 and 1978 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF 1. Comparaison des pondérations des dépenses de 1974 et de 1978 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components Composantes principales	Weights 1974 Pondérations	Weights 1978 Pondérations
All-items - Ensemble	100.00 <sup>1</sup>	100.00 <sup>1</sup>
Food - Aliments	21.49	21.11
Housing - Habitation	34.06	35.37
Clothing - Habillement	10.12	9.55
Transportation - Transports	15.84	16.26
Health and personal care - Santé et soins personnels	3.96	3.71
Recreation, reading and education - Loisirs, lecture et formation	8.29	8.61
Tobacco and alcohol - Tabacs et boissons alcoolisées	6.24	5.39

<sup>1</sup> Figures may not add up due to rounding.

<sup>1</sup> Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table 1 represent expenditures in 1974 (1974 quantities valued in 1974 prices) and in 1978 (1978 quantities valued in 1978 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981=100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section  
Prices Division, Statistics Canada  
Ottawa, Ontario  
K1A 0T6  
(Telephone: (613) 990-9606)

Les pondérations du tableau explicatif 1 représentent les dépenses en 1974 (quantités et prix de 1974) et en 1978 (quantités et prix de 1978). Elles ne peuvent servir à reconstituer ni à composer des indices sur la base de 1981=100. La méthode à suivre pour une telle reconstitution peut être obtenue sur demande auprès de la:

Section des prix à la consommation  
Division des prix, Statistique Canada  
Ottawa (Ontario)  
K1A 0T6  
(Téléphone: (613) 990-9606)

The indexes based on 1978 weights were linked or connected in March 1982 to the appropriate indexes based on 1974 weights which had been in use since October 1978. This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Les indices fondés sur les pondérations de 1978 ont été enchaînés ou raccordés en mars 1982 aux indices correspondants fondés sur les pondérations de 1974, en usage depuis octobre 1978. Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

## Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981=100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981=100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every ten years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971=100 or 1981=100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights, which will continue to relate to 1978. Furthermore, the method employed in converting to the 1981=100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

## Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 3 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level and raising it to an annual rate (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

## Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981=100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981=100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les dix ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971=100 et 1981=100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base, qui resteront celles de 1978. De plus, la méthode de conversion selon la base 1981=100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

## Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 3 consiste à prendre un taux de croissance composé sur le niveau désaisonné des trois derniers mois et à le porter à un taux annuel (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

## Reconstructed Indexes

With the release of the April 1982 Consumer Price Index, certain series were reconstructed historically to reflect more closely the Standard Commodity Classification system and the Family Expenditure categories of Statistics Canada. For further details see *The Consumer Price Index Reference Paper, Concepts and Procedures, Updating based on 1978 Expenditure*, Catalogue 62-553 (occasional).

## Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

## Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978 (the current expenditure reference period for the official CPI), 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres are not included in the calculation of the official CPI for Canada. These two centres will be included in the next Updating of the CPI at which time the 1982 expenditure patterns will be incorporated.

## Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation d'octobre 1978, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent plus fidèlement le système de la Classification type des produits et les catégories des Dépenses des Familles établis par Statistique Canada. Pour plus de renseignements, voir le *Document de référence de l'indice des prix à la consommation, concepts et procédés, mise à jour fondée sur les dépenses de 1978*, n° 62-553 au catalogue (hors-série).

## Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

## Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978 (année de référence actuelle des dépenses pour l'IPC officiel), les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains ne sont pas compris dans le calcul de l'IPC officiel pour le Canada. Ces deux centres seront pris en compte lors de la prochaine mise à jour, lorsque la composition des dépenses de 1982 sera incorporée à l'IPC.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the fifteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two month lag.

#### **Additional Information and Related Publications**

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1978 Expenditures, Concepts and Procedures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in three volumes: **Urban Family Food Expenditure, 1978**, Catalogue 62-548; **Family Expenditure in Canada, 1978**, Catalogue 62-550; and **Family Expenditure in Canada, All Canada, Urban and Rural, 1978**, Catalogue 62-551.

The latest information on the Consumer Price Index for Canada and fifteen cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available on request. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-990-9606 or 613-990-9607).

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des quinze autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

#### **Renseignements supplémentaires et publications connexes**

Le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1978, concepts et procédés" (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans trois volumes distincts: **Dépenses alimentaires des familles urbaines, 1978**, n° 62-548 au catalogue; **Dépenses des familles au Canada, 1978**, n° 62-550 au catalogue; et **Dépenses des familles au Canada, ensemble du Canada: régions urbaines et rurales, 1978**, n° 62-551 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de quinze villes sont publiés dans le bulletin mensuel "**L'indice des prix à la consommation**", n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont offerts sur demande. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6, (613-990-9606 ou 613-990-9607).

## Appendix 2

### THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 (100 cents  $\times \frac{100.0}{114.6} = 87.3$  cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 4) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

## Appendice 2

### LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents (100 cents  $\times \frac{100.0}{114.6} = 87.3$  cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (Tableau 4) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

### Appendix 3

#### SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then returns to its original level. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement in one direction over a long period. It reflects continuing rather than changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the subject.<sup>1</sup> Rather than reiterating those texts, an outline of the methodologies

### Appendice 3

#### LA DÉSÉASONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, puis revient à son niveau initial. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable orienté dans une même direction sur une longue période. Elle reflète la continuité de l'économie plutôt que l'évolution des facteurs économiques.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question<sup>1</sup>. Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des

employed in the derivation of seasonally-adjusted consumer price indexes for Canada is provided below.

Prior to the latest updating of expenditure patterns, seasonal adjustment of the Consumer Price Index was carried out at the item level using the ARIMA (Auto-Regressive Integrated Moving Average) model of the X-11 Seasonal Adjustment programme.<sup>2</sup> The resulting seasonally-adjusted item series were then analyzed to assess the quality of the seasonal adjustment process. Those series not satisfying the criteria for seasonal adjustment, as established by Statistics Canada, were left unadjusted. The seasonally-adjusted and unadjusted item series were then combined to obtain seasonally-adjusted aggregates. The weighting pattern used in this aggregation process related only to the most current reference period for expenditure weights. Monthly percent changes were published for three aggregates only, All-items, Food, All-items excluding Food, for the period commencing with the official introduction of the current expenditure weights.

The above procedure resulted in the All-items, Food and All-items excluding Food percentage changes being influenced by only a relatively small number of seasonally-adjusted item indexes as both the irregular component and the incidence of moving seasonality seriously affected the item indexes. Furthermore, with regular updating of expenditure patterns now occurring once every four years, the time series using "unlinked" indexes is too short for valid seasonal adjustment. As a result, a comprehensive review of the methodology to be used in the seasonal adjustment of the CPI is currently being undertaken. Pending the outcome of this review and in order to provide interested users with seasonally-adjusted percentage changes, seasonal adjustment using published unadjusted data for the period 1971 to present is being carried out "directly" for the All-items, Food and All-items excluding Food indexes. Users should note that this procedure may cause the change in the All-items index to fall slightly outside the range of the two component indexes.

The seasonal factors obtained by this method for those three series are shown in the following table starting in January 1975.

<sup>1</sup> Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

<sup>2</sup> The X-11 ARIMA seasonal adjustment method. Statistics Canada Cat. 62-564.

méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avant la dernière mise à jour de la composition des dépenses, la désaisonnalisation de l'indice des prix à la consommation a été réalisée au niveau de l'article grâce au modèle ARIMA (auto-régressif à moyenne mobile intégrée) du programme de désaisonnalisation X-11.<sup>2</sup> Les séries d'articles ainsi obtenues ont ensuite été analysées pour évaluer la qualité du processus de désaisonnalisation. Les séries qui ne répondaient pas aux critères de désaisonnalisation, établis par Statistique Canada, n'ont pas été désaisonnalisées. Les séries désaisonnalisées et non désaisonnalisées ont ensuite été combinées pour obtenir des agrégats désaisonnalisés. Le schéma de pondération utilisé pour ce processus d'agrégation portait uniquement sur la période de référence la plus récente pour les pondérations des dépenses. Les variations mensuelles en pourcentage ont été publiées pour trois agrégats seulement, soit l'indice d'ensemble, l'indice des aliments et l'indice d'ensemble sans les aliments, pour la période débutant avec l'introduction officielle des pondérations des dépenses courantes.

En raison de la procédure susmentionnée, seulement un nombre relativement petit d'indices d'articles désaisonnalisés ont influé sur les variations en pourcentage de l'indice d'ensemble, de l'indice des aliments et de l'indice d'ensemble sans les aliments, les indices d'articles ayant été sensiblement affectés à la fois par les mouvements accidentels et par les fréquentes fluctuations saisonnières. De plus, puisque la mise à jour de la composition des dépenses doit désormais se faire à tous les quatre ans, la série chronologique utilisant des indices "non enchaînés" est trop brève pour permettre une désaisonnalisation valide. En conséquence, on est en train de revoir entièrement les méthodes qui seront utilisées pour la désaisonnalisation de l'IPC. En attendant le résultat de cette revue et afin de fournir aux utilisateurs intéressés des variations en pourcentage désaisonnalisées, la désaisonnalisation à l'aide des données non désaisonnalisées publiées pour la période de 1971 jusqu'à aujourd'hui est effectuée "directement" pour l'indice d'ensemble, l'indice des aliments et l'indice d'ensemble sans les aliments. Les utilisateurs doivent prendre note qu'en raison de cette procédure, la variation de l'indice d'ensemble peut tomber un peu à l'extérieur de l'étendue des deux indices omposantes.

Les coefficients saisonniers obtenus par cette méthode pour ces trois séries figurent dans le tableau suivant à partir de janvier 1975.

<sup>1</sup> L'étude technique n° 12 de Julius Shiskin et de Harry Eisenpress "Seasonal Adjustments by Electronic Computer Methods", National Bureau of Economic Research, New York, 1958.

Appendix 4

CITY AVERAGE RETAIL PRICES

1. Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

Grocery stores are defined, for purposes of this Survey, as those with meat sales values at between 15% and 50% of total sales. Sales data are derived from Census of Merchandising information, updated, where necessary, by local advice from Statistics Canada Regional Offices.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

2. Calculation Methodology

(a) City Prices

Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

1. Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Aux fins de cette enquête, les épiceries étaient définies comme celles dont les ventes de viande représentaient entre 15% et 50% du total des ventes. Les données des ventes sont dérivées à partir des données du recensement des marchandises, mises à jour, lorsque nécessaire, sur recommandation des bureaux régionaux de Statistique Canada.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

2. Méthode de calcul

a) Prix urbains

Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article

obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

#### **(b) Weighted City Averages**

A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

### **3. Item Specifications**

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut; ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

#### **b) Moyennes pondérées des villes**

Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

### **3. Spécification des articles**

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

CITY AVERAGE RETAIL PRICES - ITEM SPECIFICATIONS

Detailed Specification

Beef

**Sirloin steak.** Cut from section of hind quarter next to short loin, bone-in or bone-out, fresh, Canada A or B brand, 1 kg.

**Round steak.** Cut from the inside part of the round in the hip section, fresh, Canada A or B brand, 1 kg.

**Prime rib roast.** Standing, bone-in, short cut, any ribs within the first five of standard seven, fresh, Canada A or B brand, 1 kg.

**Blade roast (blade out).** Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

**Blade roast (blade in).** Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

**Stewing beef.** Boneless stewing beef, fresh, Canada A or B brand, 1 kg.

**Ground beef, regular.** Ground beef, with 24% to 30% fat content, fresh, 1 kg.

Pork

**Bacon.** Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line, 500 g.

**Pork, centre cut chops.** Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, 1 kg.

**Pork, butt roast.** Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boneless Butt**, 1 kg.

**Pork, butt roast.** Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boston Butt**, 1 kg.

PRIX DE DÉTAIL MOYENS PAR VILLE - SPÉCIFICATIONS DES ARTICLES

Spécification détaillée

Boeuf

**Bifteck de surlonge.** Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou désossé, frais, marque Canada A ou B, 1 kg.

**Bifteck dans la ronde.** Coupé dans la partie de la ronde, située à l'intérieur de la cuisse de l'animal, frais, marque Canada A ou B, 1 kg.

**Rôti de côtes de choix.** Nature, non désossé, coupe courte, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, 1 kg.

**Rôti de palette (désossé).** Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

**Rôti de palette (non désossé).** Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

**Boeuf à ragoût.** Désossé, boeuf à ragoût, frais, marque Canada A ou B, 1 kg.

**Boeuf haché régulier.** Boeuf haché, matières grasses: 24% à 30%, frais, 1 kg.

Porc

**Bacon.** Marques des fabricants largement distribuées (sauf les marques des magasins), bacon de flanc, fumé, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité, 500 g.

**Porc, côtelettes, partie du centre.** Coupe provenant du centre de la longe, fraîches, non désossées, parées, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, 1 kg.

**Porc, rôti de porc.** Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, **rôti désossé**, 1 kg.

**Porc, rôti de porc.** Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, **"Boston Butt"**, 1 kg.

## Other Meat

**Wieners.** Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, 454 g.

## Poultry

**Chicken.** Eviscerated, fresh or frozen, broiler or fryer, whole, 1 to 2 kg, Grade A, price per kg.

## Fish

**Cod fillets.** Generally available manufacturers' brands (store brands excluded), frozen, 454 g. package.

**Salmon.** Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 220 g. tin.

## Dairy Products

**Milk.** Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 litre.

**Milk 2%.** Fresh 2% M.F. partly skimmed milk, pasteurized and may contain vitamins "A" and "D". Disposable carton of 1 litre.

**Butter.** Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 454 g.

**Cheese.** Generally available manufacturers' brands (store brands excluded), process cheese food square slices, with skim milk powder and/or whey powder added, plain without seasoning or condiments, individually wrapped, 250 g.

**Powdered milk.** Generally available manufacturers' brands (store brands excluded), powdered skim milk, 1.5 kg. card-board package, may be pasteurized or vitaminized.

**Evaporated milk.** Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 ml. can.

**Eggs.** Large eggs, Grade A, in a carton of 1 dozen.

## Autre viande

**Saucisses de Francfort.** Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, 454 g.

## Volaille

**Poulet.** Vidé, frais ou congelé, à griller ou à frire, entier, de 1 à 2 kg, catégorie A, vendu au kg.

## Poisson

**Filets de morue.** Marques des fabricants largement distribuées (sauf les marques des magasins), congelés, paquet de 454 g.

**Saumon.** Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 220 g.

## Produits laitiers

**Lait.** Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 litre (en carton), non consigné.

**Lait 2%.** Lait frais, partiellement écrémé, 2% de matières grasses de lait, pasteurisé, pouvant être additionné de vitamines A ou D. Contenant de 1 litre (en carton), non consigné.

**Beurre.** Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 454 g.

**Fromage.** Marques des fabricants largement distribuées (sauf les marques des magasins), préparation de fromage fondu, tranches carrées avec lait écrémé en poudre et (ou) poudre de lactosérum, sans assaisonnement, ni condiment, enveloppées individuellement, 250 g.

**Lait en poudre.** Marques des fabricants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 1.5 kg, peut être pasteurisé ou vitaminé.

**Lait évaporé.** Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 ml.

**Oeufs.** Oeufs de grosse taille, catégorie A, en boîte de 12.

## Bakery and Cereal Products

**Flour, 2.5 kg.** Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types.

**Macaroni.** Generally available manufacturers' brands (store brands excluded) dry, tubular shape macaroni, 500 g package.

**Corn flakes.** Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package.

**Bread.** Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

**Bread.** Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

**Soda crackers.** Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 450 g.

## Fruit

**Bananas.** First grade, price per kg.

**Grapefruit.** United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per kg.

**Oranges.** California, medium size (138 or 113) price per kg.

**Orange juice.** Generally available manufacturers' brands (store brands excluded), unsweetened or 5% sugar added, 1.36 litre.

## Vegetables

**Cabbage.** Fresh, domestic or imported, green cabbage, good quality, price per kg of an average size head.

**Carrots.** Tops completely removed, good quality, in plastic or cellophane packages price per kg.

**Celery.** Celery stalks, green, fresh, may be trimmed or clipped, price per kg.

**Lettuce.** Fresh head, green, good quality, average size head, price per kg.

**Onions.** Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages price per kg.

## Céréales et produits de boulangerie

**Farine, 2.5 kg.** Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prêtamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine.

**Macaroni.** Marques des fabricants largement distribuées (sauf les marques des magasins), macaroni, forme tubulaire, paquet de 500 g.

**Flocons de maïs.** Marques des fabricants largement distribuées (sauf les marques des magasins), maïs en flocons, paquet de 675 g.

**Pain.** Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

**Pain.** Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

**Biscuits soda.** Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 450 g.

## Fruits

**Bananes.** Première qualité, vendues au kg.

**Pamplemousses.** Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix au kg.

**Oranges.** De Californie, grosseur moyenne (138 ou 113) prix au kg.

**Jus d'orange.** Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré ou additionné de 5% de sucre, boîte de 1.36 litre.

## Légumes

**Choux.** Frais, variété canadienne ou importée, choux vert, bonne qualité, prix au kg d'un chou de grosseur moyenne.

**Carottes.** Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane, vendues au kg.

**Céleri.** Pieds de céleri, verts, frais, peuvent être taillés, prix au kg.

**Laitue.** Fraîche, verte, bonne qualité, taille moyenne, prix au kg.

**Oignons.** Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane, vendus au kg.

## Vegetables - Concluded

**Potatoes.** Table potatoes, white, Canada No. 1, 4.54 kg.

**Turnips.** May be waxed, good quality, price per kg.

**French fried potatoes.** Generally available manufacturers' brands (store brands excluded), frozen, straight or regular cut, grade A or fancy, 1 kg. poly bag.

**Beans.** Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 398 ml.

**Tomatoes, canned.** Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 796 ml.

**Tomato juice.** Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 1.36 litre.

## Sugar and Sweets

**Sugar.** White, granulated, cane or beet sugar, bag of 2 kg.

## Beverages

**Coffee, roasted.** Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 369 g. bag.

**Coffee, instant.** Generally available manufacturers' brands (store brands excluded), dried coffee, extract soluble, pure or may have added dextrin, dextrose or maltose, 283 g.

**Tea bags.** Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 60 two-cup paper bags (227 g.).

## Fats

**Shortening.** Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 454 g.

## Légumes - fin

**Pommes de terre.** Pommes de terre de table, à chair blanche, catégorie Canada n° 1, sac de 4.54 kg.

**Navets.** Peuvent être cirés, bonne qualité, prix au kg.

**Pommes de terre frites.** Marques des fabricants largement distribuées (sauf les marques des magasins), congelées, coupe ordinaire ou droite, catégorie A ou de fantaisie, sac de 1 kg. en matière plastique.

**Fèves au lard.** Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 398 ml.

**Tomates, en conserve.** Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 796 ml.

**Jus de tomates.** Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 1.36 litre.

## Sucre et produits sucrés

**Sucre.** Blanc, cristallisé, de canne ou de betterave, sac de 2 kg.

## Boissons

**Café torréfié.** Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sac de 369 g.

**Café instantané.** Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 283 g.

**Thé en sachets.** Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 60 sachets de papier pour deux tasses chacun (227 g.).

## Matières grasses

**Graisse végétale.** Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100%. Peut être partiellement hydrogénée, carton de 454 g.

## Miscellaneous Groceries

**Tomato ketchup.** Generally available manufacturers' brands (store brands excluded), made from juice of ripe tomatoes, sugar, vinegar and seasonings, 1 litre bottle.

**Soup.** Generally available manufacturers' brands (store brands excluded) of vegetable soup, 284 ml.

**Infants' food.** Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 128 ml.

**Peanut butter.** Generally available manufacturers' brands (store brands excluded), made from roasted peanuts; may be labelled smooth or creamy, 500 g.

**Jelly powder.** Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 85 g.

**Soft drinks.** Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. On bottle of 750 ml.

## Supplies and Personal Care Items

**Synthetic detergent powder.** Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 6 litres.

**Facial Tissue.** Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 20.6 cm x 23.9 cm.

**Bathroom Tissue.** Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, one or two ply sheets. Units of 4, about 600 to 650 sheets per roll, approx. 10.16 cm x 12.7 cm, wrapped in poly.

**Toothpaste.** Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 100 ml.

**Toilet soap.** Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in multiple units of three or four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

## Articles divers d'épicerie

**Ketchup aux tomates.** Marques des fabricants largement distribuées (sauf les marques des magasins), fait de jus de tomates mûres, de sucre, de vinaigre et d'assaisonnements, bouteille de 1 litre.

**Soupe.** Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte de 284 ml.

**Nourriture pour bébés.** Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 128 ml.

**Beurre d'arachides.** Marques des fabricants largement distribuées (sauf les marques des magasins), fait à partir d'arachides torréfiées; l'étiquette peut porter la mention "crèmeux", 500 g.

**Poudre à gelée.** Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 85 g.

**Boissons gazeuses.** Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 ml.

## Fournitures et articles de soins personnels

**Détergant synthétique en poudre.** Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 6 litres.

**Papier mouchoir.** Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double épaisseur, taille approximative de 20.6 cm x 23.9 cm.

**Papier hygiénique.** Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, simple ou double épaisseur. Paquets de 4, d'environ 600 à 650 feuilles par rouleau, 10.16 cm x 12.7 cm, enveloppés dans du polyéthylène.

**Pâte dentifrice.** Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 100 ml.

**Savon de toilette.** Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en groupe de trois ou quatre pains par paquet. Les savons de taille pour invité ou de bain, de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

## Supplies and Personal Care Items - Concluded

### Tobacco

**Cigarettes.** Generally available popular brands, king size, filter tip, carton of 200.

## 4. Average Retail Prices for Gasoline

Tables 14 through 19 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the fifteen urban centres for which Consumer Price Indexes are produced and cover the time period January 1982 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

## 5. Average Retail Prices for Fuel Oil

Table 20 presents average retail prices for fuel oil. The information is collected four times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 20 are confined to the fifteen urban centres for which Consumer Price Indexes are produced and for the time period January 1982 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

## Fournitures et articles de soins personnels - fin

### Tabacs

**Cigarettes.** Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

## 4. Prix de détail moyens de l'essence

Les tableaux 14 à 19 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux quinze centres urbains pour lesquels on produit un I.P.C. pour la période allant de janvier 1982 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

## 5. Prix de détail moyens du mazout

Le tableau 20 présente les prix de détail moyens du mazout. Cette information est relevée quatre fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 20 se limitent aux quinze centres urbains pour lesquels on produit un I.P.C. pour la période allant de janvier 1982 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 21 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.<sup>1</sup>

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

- St. John's - Halifax
- Charlottetown - Halifax
- Saint John - Halifax
- Ottawa - Halifax
- Toronto - Montréal
- Ottawa - Toronto
- Toronto - Winnipeg
- Regina - Winnipeg
- Edmonton - Winnipeg
- Edmonton - Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

<sup>1</sup> See Table 13 and Appendix 4.

Appendice 5

COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 21 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville<sup>1</sup> pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

- St. John's - Halifax
- Charlottetown - Halifax
- Saint John - Halifax
- Ottawa - Halifax
- Toronto - Montréal
- Ottawa - Toronto
- Toronto - Winnipeg
- Regina - Winnipeg
- Edmonton - Winnipeg
- Edmonton - Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

<sup>1</sup> Voir tableau 13 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

#### FOOTNOTES FOR TABLE 21

- (2) The weights shown are rounded 1978 weights as contained in the report **The Consumer Price Index, Reference Paper, Updating Based on 1978 Expenditures, Concepts and Procedures, (Occasional), Catalogue 62-553**. They are provided for illustration only: the weights actually used are combined cities weights with adjustments for price change since 1978.
- (3) Does not include water, fuel and electricity.

#### NOTES POUR LE TABLEAU 21

- (2) Les poids indiqués sont les poids pour 1978 figurant dans **L'Indice des prix à la consommation, document de référence, mise à jour fondée sur les dépenses de 1978, concepts et procédés (hors-série), n° 62-553 au catalogue**. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinées ajustés en fonction des variations des prix observées depuis 1978.
- (3) Ne comprend pas l'eau, le combustible et l'électricité.

Appendix 6

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

Appendice 6

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post index should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22

indices de poste concernant un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada.

Groupe principal de produits	Nombre d'articles dont le prix est relevé (lorsque disponibles)

Consumer Price Index, Canada (1981=100)  
Indice des prix à la consommation, Canada (1981=100)

## Introduction and Summary

This year-end supplement analyses consumer price behaviour in terms of changes calculated from annual average index levels. Annual averages are obtained from the twelve monthly indexes of the calendar year, January to December. The annual percentage changes identified with the year 1984 were obtained by comparing the annual average index levels for 1984 with those of 1983. Changes calculated from annual averages, unlike those obtained from comparing the current month's index with that of the same month of the previous year (see Table 1) are less influenced by irregular monthly changes. On the other hand, it should be noted that the annual average measure has the property of centering on events which are relatively distant and thus may not be relevant as indicators of more recent trends.

## Introduction et sommaire

Le présent supplément de fin d'année présente une analyse des fluctuations des prix à la consommation calculées à partir des niveaux annuels moyens des indices. Les moyennes annuelles sont basées sur les douze indices mensuels de l'année de calendrier, soit de janvier à décembre. En comparant les niveaux annuels moyens des indices de 1984 avec ceux de 1983, on a pu établir les taux de variation en pourcentage pour l'année 1984. Les taux de variation calculés à partir de moyennes annuelles sont moins touchés par les fluctuations mensuelles irrégulières que ceux obtenus en comparant l'indice du mois courant avec celui du même mois l'année précédente (voir le tableau 1). Par contre, il convient de mentionner que la mesure des moyennes annuelles est centrée sur des événements relativement distants, qui peuvent donc ne pas être pertinents en tant qu'indicateurs des tendances plus récentes.

## Overview

Changes derived from annual average index levels showed that the All-items Consumer Price Index (CPI) for Canada increased by 4.4%, down noticeably from the 5.8% increase registered in 1983 (see Table 1). The increase in 1984, the lowest recorded since 1971, may be seen as an extension of the decelerating trend in the CPI which became apparent in the latter half of 1982. On a monthly basis, the moderating trend was punctuated with some relatively sharp monthly changes. Prices rose sharply in the first two months and again in June and July and

## Aperçu

Les taux de variation établis à partir des niveaux annuels moyens des indices révèlent que l'indice d'ensemble des prix à la consommation (IPC) pour le Canada s'est accru de 4.4%, ce qui est nettement inférieur à l'accroissement de 5.8% enregistré en 1983 (voir le tableau 1). L'augmentation de 1984, la plus faible depuis 1971, peut être perçue comme étant le prolongement de la tendance de ralentissement qui a commencé à se manifester dans l'IPC au deuxième semestre de 1982. D'un mois à l'autre, cette tendance de ralentissement a été ponctuée de quelques variations mensuelles plus fortes. Les prix ont monté

then in November. However, during the Spring, price increases remained at a stable 0.2% for three consecutive months and, between August and October, the increases ranged from no overall change reported in August to 0.2% in October while in December the CPI rose 0.1%.

The decline in the rate of increase in the All-items index was due entirely to the performance of the All-items excluding Food index (up 4.0% in 1984; 6.4% in 1983) since the Food index posted an accelerated 5.6% increase in 1984 compared to a moderate 3.7% rise in 1983 (see Table 2). All the major component indexes comprising the All-items excluding Food index recorded decelerated gains of varying degrees of importance. Much of the moderation in the latest increase in the All-items index was due to a slower rate of increase in the Housing index (up 3.7% in 1984; 6.8% in 1983). Increases associated with the Tobacco and Alcohol index as well as the Recreation, Reading and Education index also made noticeable contributions to the overall slowing of the increase in consumer prices in 1984. Further pressures, albeit of a lower order, originated from slower advances identified with the Transportation, Clothing and Health and Personal Care indexes, ranked in that order. In the Housing index both rented and owned accommodation charges decelerated. In the case of the latter, the more significant effects were associated with mortgage interest cost and property taxes. The Household Operation index also recorded a significantly lower increase, as moderate increases were reported for water, fuel and electricity rates and for telephone charges. The Tobacco and Alcohol index slowed sharply, in part due to a change in the indexation formula for the federal excise tax. The Recreation, Reading and Education index as a whole, and the Recreation index in particular, registered weakened advances in 1984. In addition, the Transportation index recorded sharp declines in five months, all of which were associated with the impact of sporadic gasoline "price wars" across the country. Three successive months (August, September and October) of decline in the Transportation index were terminated abruptly by a sharp rise in gasoline prices resulting from an increase (\$2.78 per barrel of crude oil) in the Petroleum Compensation Charge, a levy designed to even out the price of petroleum based products across the country. With that increase, the price of "old" crude oil in Canada was effectively brought to world levels.

The Food index advanced by 5.6% in 1984 after rising by a moderate 3.7% in 1983. The acceleration was attributable entirely

en flèche au cours des deux premiers mois, puis en juin et en juillet, ainsi qu'en novembre. Cependant, au printemps, les hausses de prix sont restées stables à 0.2% durant trois mois consécutifs; puis, entre août et octobre, elles ont varié de 0.0% en août (aucun changement global) à 0.2% en octobre; finalement, en décembre, l'IPC a progressé de 0.1%.

La baisse du taux de croissance de l'indice d'ensemble est entièrement attribuable à la performance de l'indice d'ensemble sans les aliments (en hausse de 4.0% en 1984; 6.4% en 1983), puisque l'indice des aliments a affiché une augmentation accélérée de 5.6% en 1984 par rapport à une progression modérée de 3.7% en 1983 (voir le tableau 2). Toutes les composantes principales de l'indice d'ensemble sans les aliments ont enregistré des gains affaiblis à divers degrés. Une grande partie du ralentissement de la dernière montée de l'indice d'ensemble est imputable à un taux de croissance plus lent de l'indice de l'habitation (en hausse de 3.7% en 1984; 6.8% en 1983). Les augmentations liées à l'indice des tabacs et des boissons alcoolisées ainsi qu'à celui des loisirs, de la lecture et de la formation ont également contribué notablement à l'affaiblissement global de la hausse des prix à la consommation en 1984. D'autres pressions, quoique de moindre importance, provenaient de progressions plus lentes de l'indice des transports, de celui de l'habillement et de celui de la santé et des soins personnels, dans cet ordre. En ce qui concerne l'indice de l'habitation, il y a eu ralentissement tant du côté du logement en location que du côté du logement en propriété. Dans ce dernier cas, les influences les plus fortes ont été celles des intérêts hypothécaires et des impôts fonciers. L'avance de l'indice des dépenses de ménage a été, elle aussi, sensiblement plus faible, puisque des augmentations modérées ont été rapportées pour l'eau, le mazout, l'électricité et les services téléphoniques. La progression de l'indice des tabacs et des boissons alcoolisées a été beaucoup plus lente, en raison entre autres d'une modification de la formule d'indexation de la taxe d'accise fédérale. L'indice des loisirs, de la lecture et de la formation dans son ensemble et l'indice des loisirs en particulier ont enregistré des avances affaiblies en 1984. En outre, l'indice des transports a affiché de fortes baisses au cours de cinq mois, baisses qui étaient toutes liées aux "guerres de prix" sporadiques dans lesquelles se sont engagés les détaillants d'essence partout au pays. Après un repli de trois mois consécutifs (août, septembre et octobre), l'indice des transports a fait un bond lorsque les prix de l'essence ont monté soudainement par suite d'une majoration du prélèvement d'indemnisation pétrolière (\$2.78 de plus le baril de pétrole brut), lequel prélèvement vise à égaliser les prix des produits à base de pétrole dans tout le pays. Cette augmentation a porté aux niveaux mondiaux le prix du "vieux" pétrole brut au Canada.

L'indice des aliments s'est accru de 5.6% en 1984, comparativement à seulement 3.7% en 1983. Cet accroissement est imputable entièrement aux

to the prices of Food Purchased from Stores as the increase in the index for Food Purchased from Restaurants slowed in 1984 compared to 1983. The sharper rise in the former index was apparent in all major groups of food with particular reference to fresh fruit, fresh vegetables, meat, poultry, dairy products, coffee and tea and fats and oils. Some degree of moderation in the overall increase originated from a decline in sugar prices and lower rates of increases associated with cereal products and processed vegetables.

aliments achetés au magasin, puisque la hausse de l'indice des aliments achetés au restaurant a été plus faible en 1984 que l'année précédente. La progression plus marquée dans le cas du premier indice s'est manifestée dans tous les principaux groupes d'aliments, notamment les fruits frais, les légumes frais, la viande, la volaille, les produits laitiers, le café et le thé ainsi que les huiles et corps gras. L'augmentation globale a été modérée dans une certaine mesure par une baisse du prix du sucre et par des taux de croissance plus faibles en ce qui concerne les produits céréaliers et les légumes traités.

TABLE 2. Percentage Change in Major Consumer Price Index Components, Based on Annual Average Indexes, 1983 to 1984, 1982 to 1983 and 1981 to 1982

TABLEAU 2. Taux de variation des composantes principales de l'indice des prix à la consommation, basés sur les indices moyens annuels, 1983 à 1984, 1982 à 1983 et 1981 à 1982

Major components	1983 to 1984	1982 to 1983	1981 to 1982
Principales composantes	1983 à 1984	1982 à 1983	1981 à 1982
All-items - Ensemble	4.4	5.8	10.8
Food - Aliments	5.6	3.7	7.2
All-items excluding food - Ensemble sans les aliments	4.0	6.4	11.8
Housing - Habitation	3.7	6.8	12.5
Clothing - Habillement	2.5	4.0	5.6
Transportation - Transports	4.2	5.0	14.1
Health and personal care - Santé et soins personnels	3.9	6.9	10.6
Recreation, reading and education - Loisirs, lecture et formation	3.4	6.5	8.7
Tobacco and alcohol - Tabacs et boissons alcoolisées	8.2	12.6	15.5

#### Major Contributors to the Annual Average CPI Percentage Change

The 4.4% increase in the All-items index for 1984 was associated with advances in all its major component indexes which contributed in varying proportions to the increase in the general price level. About thirty percent of the change in the All-items index was identified with higher Housing charges which advanced by 3.7%. Approximately half of this contribution originated from higher shelter charges. These were accompanied by higher charges for water, fuel and electricity as well as by higher furniture prices. The 5.6% increase in the Food index contributed to over twenty five percent of the increase in the All-items index. The bulk of this was due to higher prices associated with Food Purchased from Stores. A further seventeen percent of the All-items increase was due to increased Transportation charges most of which was explained by higher prices for new cars and gasoline and higher fares associated with public modes of transportation. Increased Tobacco and Alcohol prices (up 8.2%) also explained a little over ten percent of the overall increase.

#### Principaux facteurs du changement annuel moyen de l'IPC

La progression de 4.4% de l'indice d'ensemble pour 1984 est liée à des avances dans toutes ses principales composantes, qui ont contribué dans des proportions variées à la hausse du niveau général des prix. Environ trente pour cent de la variation de l'indice d'ensemble provient de la composante de l'habitation, qui a grimpé de 3.7%. À peu près la moitié de cette contribution découle de frais de logement plus élevés. En outre, on a observé une augmentation de la taxe d'eau, des prix du mazout et des tarifs de l'électricité, ainsi qu'une hausse des prix des meubles. La montée de 5.6% de l'indice des aliments est intervenue pour plus de vingt-cinq pour cent de l'accroissement de l'indice d'ensemble, à cause en grande partie de la majoration des prix des aliments achetés au magasin. Pour ce qui est de la composante des transports, son apport à la progression de l'indice d'ensemble a été de dix-sept pour cent, en raison principalement de la hausse des prix des voitures neuves et de l'absence ainsi que des frais de transport en commun. L'augmentation de 8.2% des prix des tabacs et des boissons alcoolisées justifie un peu plus de dix pour cent de l'accroissement global.

## Development of Price Changes by Major Components

### **Food**

The Food index rose by 5.6% in 1984 compared to an advance of 3.7% in 1983. The accelerated increase in 1984 resulted from a relatively sharp rise (6.0% in 1984; 2.9% in 1983) in the prices of Food Purchased from Stores, as the prices of Food Purchased from Restaurants decelerated noticeably in 1984 (up 4.1% in 1984; 5.7% in 1983). Most of the increase in 1984 occurred in the first half of the year as, during the latter part of the year, the Food index either declined sharply or recorded no overall change. The rapid increases noted in the first three months of the year were largely associated with higher prices for fresh vegetables, largely due to a rapid depletion of the stocks of storable vegetables resulting from poor growing and harvesting conditions in 1983 as well as the impact of unusually cold weather in the southern United States. The rise of milk prices in Ontario and New Brunswick in January accompanied by an increase in the support price of "industrial" milk also had a noticeable effect in this period. In the midst of these developments, grocery "price wars" appeared in Québec, Ontario and Manitoba which helped to dampen the overall upward pressure but, by the same token, the termination of these "wars" resulted in a relatively sharp rise in the March index. The index registered sharp increases again in June and July due to higher prices for fresh fruit and vegetables, milk, beef, pork and chicken. Another "price war" in Québec and the downward pressure from seasonally lower fresh vegetable prices lowered the index in August and from that point onwards the Food index remained unchanged overall.

### **Housing**

The Housing index increased by 3.7% in 1984 (the lowest annual increase since 1966) representing a much smaller advance relative to the 6.8% rise reported in 1983. Much of the decline in the rate of increase in 1984 was attributable to Shelter charges, up 3.7% in 1984 compared to 6.8% in 1983. In particular, owned accommodation charges decelerated sharply (up 2.9% in 1984; 6.5% in 1983) responding to major improvements in the mortgage interest cost index and the property tax index. Slower rates of increase associated with water, fuel and electricity charges and in the prices of major household appliances also played a noticeable role in moderating the increase in the Housing index in 1984.

## Évolution des changements de prix par composantes principales

### **Aliments**

L'indice des aliments s'est accru de 5.6% en 1984 comparativement à 3.7% en 1983. L'accroissement plus rapide en 1984 résulte d'une hausse relativement marquée (6.0% en 1984; 2.9% en 1983) des prix des aliments achetés au magasin, puisque les prix des aliments achetés au restaurant ont progressé beaucoup plus lentement en 1984 (en hausse de 4.1% en 1984; 5.7% en 1983). La plus grande partie de l'augmentation en 1984 s'est produite au cours du premier semestre car, durant le second semestre, l'indice des aliments a régressé beaucoup ou est resté inchangé d'un mois à l'autre. Les progressions rapides observées au cours des trois premiers mois de l'année étaient largement reliées aux prix des légumes frais qui étaient plus élevés en raison de l'épuisement précipité des stocks de légumes entreposables; cet épuisement découlait des mauvaises conditions de culture et de récolte en 1983 ainsi que des températures exceptionnellement froides enregistrées dans le sud des États-Unis. La montée des prix du lait en Ontario et au Nouveau-Brunswick en janvier, accompagnée d'une majoration du prix garanti du lait de transformation, a eu aussi un effet notable au cours de cette période. Au milieu de tous ces développements, certains marchés d'alimentation au Québec, en Ontario et au Manitoba se sont engagés dans des "guerres de prix" qui ont aidé à freiner la tendance globale à la hausse, mais qui, du même coup, lorsqu'elles ont pris fin, ont entraîné une augmentation relativement importante de l'indice en mars. Des avances marquées de l'indice ont été enregistrées encore en juin et en juillet à cause des prix plus élevés qu'il fallait payer pour acheter des fruits et légumes frais, du lait, du boeuf, du porc et du poulet. Une autre "guerre de prix" au Québec et la baisse saisonnière des prix des légumes frais ont fait descendre l'indice en août; à partir de ce moment, l'indice global des aliments est demeuré stable.

### **Habitation**

L'indice de l'habitation a progressé de 3.7% en 1984 (plus faible progression annuelle depuis 1966), ce qui est considérablement inférieur à l'avance de 6.8% enregistrée en 1983. Une bonne part de cet affaiblissement du taux de croissance en 1984 est attribuable aux frais de logement, qui ont monté de 3.7% en 1984 comparativement à 6.8% en 1983. Plus particulièrement, la hausse des frais de logement en propriété a beaucoup ralenti (+2.9% en 1984; +6.5% en 1983) en conséquence d'améliorations majeures des indices des intérêts hypothécaires et des impôts fonciers. La croissance plus lente de la taxe d'eau, des tarifs de l'électricité ainsi que des prix du mazout et des principaux appareils ménagers a également contribué notablement à modérer la progression de l'indice de l'habitation en 1984.

Among the major events affecting the Housing index in 1984 were a sharp rise in fuel oil prices in November resulting from an increase in the Petroleum Compensation Charge, a rise in electricity rates in several provinces and a marginal increase in water and piped gas rates across the nation. Telephone rates rose in some Western provinces in July and in Québec and Ontario in September. Towards the latter part of the year, furniture prices began to reflect some upward pressures as well.

### Clothing

The Clothing index rose by 2.5% in 1984, recording the lowest increase since 1971. The latest movement was markedly slower than the 4.0% increase registered in 1983. On average, women's wear prices (up 2.8%) moved up faster compared to men's wear (up 1.6%). Girls' wear prices were up 3.1% compared to a rise of 2.3% in Boys' wear prices. Over the course of the year, the index fluctuated in accordance with the seasonal pattern previously observed. The index fell in the month of January, April, July and December, largely reflecting the seasonal discounts offered by retailers, and rose sharply in February and March due to the close of the winter "sale" period and the appearance of new stocks of spring and summer clothing.

### Transportation

The Transportation index was up 4.2% in 1984 (the lowest increase since 1973) compared to a rise of 5.0% in 1983. The slower growth rate was associated with Private Transportation costs (up 3.8% in 1984; 4.7% in 1983) since Public Transportation charges rose slightly faster in 1984. The deceleration in the Transportation index was the result of slower advances in gasoline prices, repair charges and vehicle insurance premiums. During the course of the year, the Transportation index fell in five months (February, March, August, September and October). Gasoline "price wars" in several major urban centres and "seat-sales" relating to air travel were the major factors causing the declines. In November, the index rose sharply (2.1%) as the 1985 model passenger cars reported a price increase of 3.0% and gasoline prices rose by 3.7% in part reflecting the latest increase in the Petroleum Compensation Charge.

Parmi les éléments importants ayant influé sur l'indice de l'habitation en 1984, mentionnons la forte hausse des prix du mazout en novembre résultant d'une augmentation du prélèvement d'indemnisation pétrolière, une majoration des tarifs de l'électricité dans plusieurs provinces et une légère progression de la taxe d'eau et des tarifs du gaz canalisé dans tout le pays. Les tarifs du téléphone ont augmenté dans certaines provinces de l'Ouest en juillet, et au Québec et en Ontario en septembre. Vers la fin de l'année, les prix des meubles ont également commencé à afficher une tendance à la hausse.

### Habillement

L'indice de l'habillement a avancé de 2.5% en 1984, enregistrant les hausses les plus faibles depuis 1971. Ce dernier mouvement était beaucoup plus lent que la progression de 4.0% observée en 1983. En moyenne, les prix des vêtements pour femmes (+2.8%) ont monté plus vite que ceux des vêtements pour hommes (+1.6%). Les prix des vêtements pour filles ont augmenté de 3.1%, comparativement à une majoration de 2.3% des prix des vêtements pour garçons. Tout au long de l'année, l'indice a fluctué conformément aux tendances saisonnières observées précédemment. L'indice a reculé en janvier, en avril, en juillet et en décembre, reflétant en grande partie les rabais saisonniers offerts par les détaillants, et il a avancé de façon marquée en février et en mars en raison de la fin de la période de solde d'hiver et de l'arrivée des nouveaux vêtements de printemps et d'été dans les magasins.

### Transports

L'indice des transports s'est accru de 4.2% en 1984 (plus faible progression depuis 1973), comparativement à une montée de 5.0% en 1983. Ce ralentissement du taux de croissance est lié aux coûts du transport privé (en hausse de 3.8% en 1984; 4.7% en 1983), puisque les frais de transport public ont avancé légèrement plus vite en 1984. La décélération de l'indice des transports découle de la montée plus lente des prix de l'essence, des frais de réparation et des primes d'assurance-automobile. L'indice des transports a fléchi au cours de cinq mois (février, mars, août, septembre et octobre) pendant l'année. Les "guerres de prix" entre les détaillants d'essence dans plusieurs grands centres urbains et les soldes de places dans le secteur du transport aérien sont les principaux éléments à l'origine de ces baisses. En novembre, l'indice a enregistré une forte poussée (2.1%) par suite d'une hausse de 3.0% du prix des voitures 1985 ainsi que d'une hausse de 3.7% des prix de l'essence reflétant en partie la plus récente majoration du prélèvement d'indemnisation pétrolière.

## Health and Personal Care

The Health and Personal Care index rose by 3.9% in 1984, a moderate rise compared to the increase of 6.9% registered in 1983. Decelerated increases in both the Health Care component as well as the Personal Care component of this index contributed to the latest moderation. Most of the latest increase was associated with eye and dental care charges as well as with prescribed and non-prescribed medicines. Barbering and hairdressing services also reported noticeable price gains as did selected personal care supplies.

## Recreation, Reading and Education

In 1984, the Recreation, Reading and Education index advanced by 3.4%, a considerably moderate rise compared to the increase of 6.5% registered the previous year. The increase in the latest year comprised advances of 3.0% in the Recreation index, 4.3% in the Reading index and 5.8% in the Education index. Much of the variation, as well as the increase in the aggregate index over the course of the year was due to changes in hotel/motel accommodation rates, in admission charges to sporting and other events, in fees and dues for recreational activities and in quotations for package holiday trips. In addition, newspaper and magazine prices rose slightly. University tuition fees, reported in September, posted significant gains in all provinces except in Québec.

## Tobacco and Alcohol

The Tobacco and Alcohol index also rose at a relatively high but decelerated rate of 8.2% in 1984 compared to the increase of 12.6% reported in 1983. Both the Tobacco Products and Smokers' Supplies index as well as the Alcoholic Beverages index contributed to this slower increase. Cigarette prices fell in the first two months of the year as well as in December. During the spring and summer months, fiscal changes at the provincial level caused the cigarette index to rise. A major advance in the aggregate index occurred with the September 1 increase in the Federal Excise taxes, the effect of which was felt right up to November.

## Goods and Services

The increase in the All-items index viewed in terms of Goods and Services provides additional insights into relative rates of price changes in 1984. Both the Goods index (up 4.7%) and the Services index (up 3.8%) posted decelerated rates of advance compared to increases of 5.4% and 6.5% terms, however, the slackening of the pace

## Santé et soins personnels

L'indice de la santé et des soins personnels a avancé de 3.9% en 1984, ce qui est nettement inférieur à la montée de 6.9% enregistrée en 1983. La croissance plus lente des deux composantes de l'indice, soit celles des soins de santé et des soins personnels, ont contribué à cet affaiblissement. Une grande part de la dernière augmentation est liée aux soins dentaires et des yeux ainsi qu'aux médicaments sur ordonnance et sans ordonnance. Les services de coiffure pour hommes et pour femmes ont également subi des hausses de prix notables, tout comme certains produits de soins personnels.

## Loisirs, lecture et formation

En 1984, l'indice des loisirs, de la lecture et de la formation s'est accru de 3.4%, taux de croissance considérablement modéré comparativement à celui de 6.5% enregistré l'année précédente. La dernière progression annuelle résulte d'avances de 3.0% de l'indice des loisirs, de 4.3% de l'indice de la lecture et de 5.8% de l'indice de la formation. Une grande partie des fluctuations ainsi que la montée de l'indice global au cours de l'année découlent de changements relatifs aux prix des chambres d'hôtel et de motels, aux droits d'entrée aux activités sportives et autres, aux frais et cotisations pour les activités récréatives et aux forfaits pour les voyages organisés. En outre, on a observé une légère majoration des prix des journaux et des revues. Les frais de scolarité dans les universités, pour l'année commençant en septembre, ont monté de façon importante dans toutes les provinces sauf au Québec.

## Tabacs et boissons alcoolisées

L'indice des tabacs et des boissons alcoolisées s'est accru de 8.2% en 1984, taux relativement élevé, mais ralenti par rapport à la montée de 12.6% enregistrée en 1983. L'indice des produits du tabac, celui des articles pour fumeurs et celui des boissons alcoolisées ont tous contribué à ce ralentissement. Les prix des cigarettes ont baissé au cours des deux premiers mois de l'année et en décembre. Au printemps et à l'été, des changements fiscaux au niveau provincial ont entraîné une progression de l'indice des cigarettes. L'indice global a été durement secoué par la hausse des taxes d'accise fédérales qui est entrée en vigueur le 1<sup>er</sup> septembre et dont l'effet s'est fait sentir jusqu'en novembre.

## Biens et services

En examinant la croissance de l'indice d'ensemble sous un angle différent, soit celui des biens et services, on peut obtenir davantage de renseignements sur les taux relatifs de variation des prix en 1984. L'indice des biens (+4.7%) et celui des services (+3.8%) ont tous deux affiché des taux de croissance ralentis comparativement aux progressions de 5.4% et de 6.5% respective-

in the Services index exerted a greater influence on the lower rate of increase in the All-items index in 1984 compared to the slowing of the Goods index. Much of this was due to the deceleration in the Shelter component (up 3.7% in 1984; 6.8% in 1983) and, to a lesser extent, to the Restaurant Meals component of the Services index. On the other hand, the decelerating impact of the Goods index was hampered by a higher rate of price change reported for Food Purchased from Stores in 1984 compared to 1983. As a result, the Goods excluding Food index (up 4.2% in 1984; 6.3% in 1983) exerted a considerably large influence in causing a slowdown in overall consumer prices in 1984.

All the major components of the Goods index also registered lower rates of increase in 1984. However, the proportionate impact of the change in the Semi-durable index was most pronounced. The relatively depressed state of the Clothing index was largely responsible for the moderation in the Semi-durable goods index. In the Durable goods index, the slow-down was effected by sluggish price increases for major household appliances, home-entertainment and recreational equipment as well as outdoor recreational equipment. Some of this moderate pace was offset by higher price increases reported for new automobiles and for furniture. In the market for Non-durable goods, most of the smaller price gains were due to a slackening in the pace of energy prices, reading charges and tobacco and alcohol prices.

#### City Consumer Price Movements

Consumer prices increased in all cities for which CPI's are produced with increases ranging from 2.5% in Calgary (2.7% in Edmonton) to 5.1% in Saint John (5.0% in Ottawa). The significantly lower rates of increase found in Calgary and Edmonton were primarily attributable to lower shelter charges which continued to reflect the depressed state of the housing market following the recession of 1982. The higher than average increase reported for Saint John was traceable, in the main, to higher food and housing charges. In the case of Ottawa relatively sharp advances in both housing and transportation charges explained the higher than average overall increase.

The rates of increase registered by all cities in 1984 were lower than those for 1983. In relative terms the rate of deceleration was largest in Edmonton, Winnipeg, Calgary and Saskatoon and smallest in such cities as Charlottetown/Summerside, Thunder Bay, Saint John, Montreal and Ottawa.

ment enregistrées en 1983. Toutefois, en termes relatifs, l'avance plus lente de l'indice des services a contribué davantage à modérer le taux de croissance de l'indice d'ensemble en 1984 que l'avance plus lente de l'indice des biens. Cela découle en grande partie de la décélération de la composante du logement (en hausse de 3.7% en 1984; 6.8% en 1983) et, dans une moindre mesure, de l'affaiblissement de la composante des repas pris au restaurant de l'indice des services. Par contre, l'effet modérateur de l'indice des services a été amoindri par un taux plus élevé de variation des prix des aliments en 1984 par rapport à 1983. Ainsi, l'indice des biens sans les aliments (en hausse de 4.2% en 1984; 6.3% en 1983) a joué un rôle important dans le ralentissement de l'ensemble des prix à la consommation en 1984.

Toutes les composantes principales de l'indice des biens ont également affiché des taux de croissance moins élevés en 1984. Toutefois, l'impact proportionnel de la variation de l'indice des biens semi-durables a été le plus prononcé. L'état relativement léthargique de l'indice de l'habillement est en grande partie responsable de l'affaiblissement de l'indice des biens semi-durables. Du côté de l'indice des biens durables, le ralentissement découle des faibles hausses des prix des principaux appareils ménagers, du matériel récréatif et de détente au foyer ainsi que du matériel récréatif d'extérieur. Ce rythme modéré a été quelque peu dérangé par des hausses plus importantes des prix des voitures neuves et des meubles. Sur les marchés des biens non-durables, la plupart des faibles majorations de prix sont attribuables à une décélération de la croissance des prix de l'énergie, des frais de lecture et des prix des tabacs et des boissons alcoolisées.

#### Mouvements des prix à la consommation dans les villes

Les prix à la consommation ont augmenté dans toutes les villes pour lesquelles on calcule un IPC. Ces hausses variaient entre 2.5% à Calgary (2.7% à Edmonton) et 5.1% à Saint John (5.0% à Ottawa). Les taux de croissance plus faibles observés à Calgary et à Edmonton sont imputables principalement aux frais de logement moins élevés qui ont continué de refléter le marasme du marché de l'habitation après la récession de 1982. La montée plus forte que la moyenne enregistrée à Saint John est liée surtout à une majoration des prix des aliments et des frais de logement. En ce qui concerne Ottawa, des avances relativement marquées des frais de logement et de transport expliquent la progression globale plus rapide que la moyenne.

En 1984, toutes les villes ont affiché des taux de croissance plus lents que l'année précédente. En termes relatifs, la décélération a été plus forte à Edmonton, Winnipeg, Calgary et Saskatoon, et plus faible dans des villes comme Charlottetown/Summerside, Thunder Bay, Saint John, Montréal et Ottawa.

Comparing price movements by major components across cities revealed a considerable degree of variation. The Food index rose by 1.3% in Saskatoon but was up by 6.9% in Toronto. In the Housing index, Calgary reported a decline of 0.7% (Edmonton up 0.3%) but in Ottawa the increase was 5.8%. Clothing prices rose by a moderate 1.0% in Charlottetown/Summerside but increased by 3.4% in Saskatoon. At the same time Québec reported a 2.7% increase in the Transportation index while an increase twice that size was observed in Regina. In the case of the Health and Personal Care index, the lowest rate of increase was observed in Winnipeg while the highest rates were observed in Ottawa and in Regina. Québec also registered the lowest gain (0.9%) in the Recreation, Reading and Education index with Halifax reporting an increase of 5.8%, over six times as large. Finally, the increases across cities were a great deal more even in the case of the Tobacco and Alcohol index where Québec and Montreal each posted advances of 7.0% while Calgary reported an increase of 9.7%.

La comparaison des mouvements des prix par composante principale dans les différentes villes révèle des variations considérables. L'indice des aliments s'est accru de 1.3% à Saskatoon, mais a fait un bond de 6.9% à Toronto. Pour ce qui est de l'indice de l'habitation, Calgary a enregistré une baisse de 0.7% (Edmonton, +0.3%), mais Ottawa a subi une hausse de 5.8%. Les prix des vêtements ont progressé de 1.0% seulement à Charlottetown/Summerside, mais de 3.4% à Saskatoon. Alors que l'indice des transports a avancé de 2.7% à Québec, Regina a affiché une montée deux fois plus grande. Dans le cas de l'indice de la santé et des soins personnels, le taux de croissance le plus lent a été enregistré à Winnipeg et le plus rapide, à Ottawa et à Regina. Québec a aussi affiché les progrès les plus faibles (0.9%) en ce qui concerne l'indice des loisirs, de la lecture et de la formation, tandis que Halifax a subi une augmentation de 5.8%, soit plus de six fois plus grande que celle de Québec. Finalement, les hausses dans les diverses villes étaient beaucoup plus égales dans le cas de l'indice des tabacs et des boissons alcoolisées; en effet, à ce chapitre, on a enregistré des avances de 7.0% à Québec et à Montréal, tandis qu'on a observé une progression de 9.7% à Calgary.

TABLE 4. Percentage Change Based on Annual Averages Between 1983 and 1984 for All-items Consumer Price Indexes and Major Components by Urban Centres and Canada

TABEAU 4. Taux de variation basé sur les moyennes annuelles entre 1983 et 1984 pour l'indice d'ensemble des prix à la consommation et les principales composantes pour les centres urbains et le Canada
